1 CHAIRMAN HASAY: The hour having
2 arrived, the House Commerce Committee will now come
3 to order. The Commerce Committee today is going to
4 have a hearing on identity theft and credit card
5 debt.

6 I would like to have the members that
7 are here introduce themselves and the county that
8 they represent, starting at the front table first,
9 left to right. Dave.

10 REPRESENTATIVE REED: Representative
11 Dave Reed, Indiana County.

12 REPRESENTATIVE YEWIC: Representative
13 Tom Yewcic, parts of Cambria and Somerset Counties.

14 REPRESENTATIVE GORDNER:
15 Representative John Gordner, Columbia County.

16 CHAIRMAN HASAY: Next table.

17 REPRESENTATIVE TRAVAGLIO:
18 Representative Guy Travaglio, Butler County.

19 REPRESENTATIVE SCAVELLO:
20 Representative Mario Scavello from Monroe County.

21 REPRESENTATIVE DENLINGER:
22 Representative Gordon Denlinger from Lancaster
23 County.

24 REPRESENTATIVE STEVENSON:
25 Representative Tom Stevenson from Allegheny County.

1 REPRESENTATIVE NAILOR: Jerry Nailor
2 from Cumberland County.

3 CHAIRMAN HASAY: George Hasay,
4 Luzerne, Wyoming, and Columbia Counties.

5 REPRESENTATIVE CALTAGIRONE: Tom
6 Caltagirone, Berks County.

7 REPRESENTATIVE CASORIO: Jim Casorio,
8 Westmoreland County.

9 REPRESENTATIVE GILLESPIE: Keith
10 Gillespie, part of York County.

11 CHAIRMAN HASAY: The first witness we
12 have today is Beth McConnell.

13 Beth, you can come forward and grab
14 one of those microphones and begin.

15 Beth is with the Pennsylvania Public
16 Interest Research Group.

17 MS. McCONNELL: Great. Thank you.
18 Good morning, Chairman Hasay and other members of
19 the committee.

20 My name is Beth McConnell, and I am
21 the director of the Pennsylvania Public Interest
22 Research Group, PennPIRG. PennPIRG is a non-profit,
23 non-partisan, public interest advocacy organization.
24 We represent about 8,000 citizen members across the
25 state.

1 PennPIRG works to protect consumers
2 and taxpayers as well as revitalize participation in
3 the Democratic process. And our state and national
4 office have long been involved in identity theft and
5 credit card debt issues, including testifying before
6 Congress and the state Legislature, the publication
7 of numerous research reports and surveys, and public
8 outreach and education. So I thank you for the
9 opportunity to be able to comment on this issue
10 today.

11 Before I begin my background comments,
12 I would like to start by highlighting a few key
13 proposals that PennPIRG supports to protect
14 consumers. And then I will provide some background
15 and contacts on those.

16 The first proposal that we support is
17 prohibiting the use of a social security number as a
18 personal identifier as well as prohibit the public
19 posting or display of that number.

20 Second is to prohibit any entity from
21 coercing consumers into supplying their social
22 security number as a requirement for receiving goods
23 or services.

24 The third is to require that
25 institutions seek a consumer's permission before

1 sharing their personal information -- this is also
2 known as opt-in -- when the federal preemption laws
3 expire next year.

4 Fourth is to instruct Congress to
5 allow those preemption laws in the Fair Credit
6 Reporting Act to expire next year as scheduled.

7 And fifth is to require that credit
8 bureaus give consumers one free copy of their credit
9 report annually.

10 And I should also mention that my
11 horoscope on the train today said that I should be
12 forceful and I will get what I want. So maybe I
13 should add some additional items to that list.

14 In the rapidly advancing information
15 age, a consumer's personal information is a very
16 valuable commodity. Social security numbers,
17 information on a consumer's buying patterns, their
18 names, addresses, and telephone numbers and other
19 data is often bought, sold, shared, or traded among
20 banks, credit card companies, supermarkets,
21 retailers, and numerous other industries.

22 These companies turn a profit by
23 collecting and using a consumer's personal
24 information without the individual's permission or
25 knowledge, in most cases. And as a result,

1 consumers are losing control over who has access to
2 their personal information and how that information
3 can be used.

4 Additionally, social security numbers
5 are often used by health insurance companies,
6 universities, government agencies, and others as
7 account numbers or unique personal identifiers.
8 Even if an institution does not aim to profit from
9 the dissemination or use of this information, the
10 collection and storage and wide use of social
11 security numbers places consumers at great risk.
12 Such activity makes it much harder for consumers to
13 control or track the dissemination of their personal
14 information and much easier for thieves to access
15 and misuse it.

16 One of the most pervasive ways that we
17 know personal information is being misused is
18 identity theft. It is the fastest-growing
19 white-collar crime, with a 400 percent increase in
20 the number of reported cases between 1995 and 2000.
21 According to the Federal Trade Commission, there
22 were over 5,000 reported identity theft cases in
23 Pennsylvania in 2002, up from about 2,700 the year
24 before. And these, of course, are just the cases
25 that we know of. And 46 percent of the crimes in

1 Pennsylvania involve credit card fraud, and others
2 included unauthorized phone or utility service, bank
3 fraud, and fraudulent loans.

4 Victims of identity theft face credit
5 denials, out-of-pocket costs, and even arrest when
6 mistaken for a thief using their name. And the FTC
7 does estimate that it takes the average victim of
8 identity theft 175 hours and \$808 in out-of-pocket
9 costs just to clear their own name.

10 These cases average two to four years
11 to be resolved, if it can be resolved; and the cost
12 to businesses is astronomical. In 1997, U.S. fraud
13 losses of VISA member banks equaled \$490 million,
14 and MasterCard member banks lost \$407 million.

15 There is one person in particular that
16 I would like to highlight. His name is Kevin Scott
17 of Philadelphia. And he's somebody that PennPIRG
18 has worked with an awful lot over the last few
19 years. A thief was able to obtain Kevin's social
20 security number and used this information to very
21 easily open utility accounts at several different
22 addresses in the Philadelphia area, leaving Kevin
23 responsible for thousands of dollars in phone,
24 cable, gas, and electric bills.

25 Now, despite the fact that a duplicate

1 already existed in Kevin's real name at his true
2 address, the utility companies never bothered to
3 contact him when the fraudulent accounts were opened
4 to verify whether or not they were, in fact,
5 fraudulent or legitimate. The thief also committed
6 several crimes in Kevin's name, leading to a
7 criminal record for Kevin despite no wrongdoing of
8 his own.

9 It was actually several years before
10 he even discovered the existence of the fraud when
11 he requested a copy of his credit report following
12 denial of credit. And after learning of the
13 identity theft and criminal record, Kevin contacted
14 the police and utility companies to close the
15 accounts and report the crime.

16 However, the companies that allowed
17 the thief to open these accounts in the first place
18 took absolutely no responsibility in solving the
19 problem and clearing Kevin's credit report. And
20 despite spending more than 200 hours over a period
21 of one year just to clear his name and report, Kevin
22 still has to deal with the aftermath.

23 Erroneous information continues to
24 appear on his credit report, and he has been unable
25 to clear his criminal record without hiring an

1 attorney. In fact, he called the police station at
2 one point and alerted them to the problem. The
3 officer said, please don't come down here because we
4 will have to arrest you. Hire a lawyer. That's the
5 only way that we can deal with this. And he expects
6 to have continued problems when he attempts to
7 refinance his mortgage.

8 In another instance, a student at the
9 University of Pennsylvania was a victim of identity
10 theft on more than one occasion. This student
11 believes that the thief got ahold of her social
12 security number by rummaging through her trash in
13 which she discarded mail from the university and it
14 contained her printed social security number. And
15 the thief was able to use this information to open a
16 charge account at Target, leaving the student with
17 unpaid bills and the burden of proving her own
18 innocence. And she estimated it took at least 20
19 hours over several weeks to resolve the matter.

20 Adding insult to injury, a consumer
21 does not have the right to sue if their information
22 is misused, often preventing the consumer from
23 recouping losses as a result of identity theft. And
24 similarly, the financial institutions or businesses
25 that allow the fraudulent accounts to be opened are

1 under no responsibility to quickly or effectively
2 clear the victim's credit report, leaving that
3 burden on the consumer.

4 Furthermore, it's very difficult for
5 law enforcement to pursue identity theft cases. The
6 police and attorneys generally lack the resources
7 and the expertise that they need to fully
8 investigate and prosecute identity theft cases.

9 Even in instances where a case is
10 resolved and a victim's name is cleared of
11 wrongdoing, often their criminal record is not
12 expunged in state and national databases. And local
13 police also lack the authority to pursue cases in
14 which the crime was committed in another state,
15 which is a very common occurrence in the electronic
16 age when crimes against Pennsylvanians can be
17 committed over the Internet by a thief elsewhere.

18 Finally, many consumers are finding
19 that refusal to provide personal information results
20 in penalties or other forms of punishment. The
21 Privacy Rights Clearinghouse, which is a nationally
22 known expert on this issue, has several documented
23 cases in which refusal to provide a social security
24 number has resulted in evictions, denial of garbage
25 pickup, and even the refusal of a dentist to treat a

1 long-time patient.

2 That is why we urge you to prohibit
3 entities from coercing consumers into supplying
4 their social security numbers as a condition of
5 receiving goods or services, unless, of course, the
6 collection of that number is required under state or
7 federal law.

8 Several pieces of legislation have
9 already been introduced into the House to assist
10 identity theft victims and give law enforcement
11 additional authority, expertise, and resources to
12 pursue the cases. Among them are House Bills 583
13 and 585 through 589 sponsored by Representative Mike
14 McGeehan, who himself is a victim of identity theft.

15 But while assisting law enforcement
16 and victims is a critical part of dealing with the
17 problem of identity theft, we also need to do much
18 more to prevent the crime altogether. And reducing
19 the use of social security numbers is key to that
20 effort.

21 Originally, social security numbers
22 were only meant for the federal government's use to
23 track wages and benefits. But now these numbers are
24 used by a multitude of public and private
25 institutions as identification numbers or as a

1 security measure to confirm an individual's
2 identity.

3 However, the widespread use of these
4 numbers completely undermines of use of it as a
5 security measure. It also provides numerous
6 opportunities for thieves to gain access to valuable
7 information.

8 Last July, the state of California
9 began implementing legislation that prohibited the
10 public posting or display of social security numbers
11 and use of them as identification numbers. Despite
12 predictions of dire consequences by industries and
13 institutions opposed, state officials report that
14 implementation has been quite smooth, and there have
15 been no reports of unmanageable expense or
16 technological difficulty. Given their success,
17 there is now a move to include state universities,
18 who are currently exempted from the code in
19 California. You will find comments from Joanne
20 McNabb, who is the chief of the California Privacy
21 Office, attached to my testimony.

22 Elsewhere, some other private and
23 public institutions have already adopted similar
24 rules voluntarily, such as at the University of
25 Illinois. In 2000, the University began phasing in

1 their policy that prohibits the public posting or
2 display of social security numbers and expects the
3 process to be complete by 2005.

4 According to Michael Corn, who
5 administers the policy for the Office of Planning
6 and Budget at the University of Illinois, he said
7 that the process fit well into a plan to integrate
8 the University's computer systems and has not
9 resulted in a significant expenditure of resources.

10 The University of Pennsylvania has
11 also begun to evaluate their collection and storage
12 and use of social security numbers. But while I'm
13 unaware of any official or adopted policy ending the
14 improper use of social security numbers at the
15 University, Penn is now working to implement
16 recommendations of the Task Force on Privacy and
17 Personal Information.

18 Additionally, we recommend that
19 legislation be introduced to require that all
20 consumers get one free copy of their credit report
21 annually. Often, victims of identity theft don't
22 know they're victims for months or years after the
23 crime first occurred. And this allows that criminal
24 activity to occur virtually unnoticed for far too
25 long. By reviewing one's credit report, the

1 suspicious activity can be identified and stopped
2 much quicker.

3 However, consumers are only entitled
4 to a free copy of their credit report once they have
5 already been victims or have been denied credit and
6 know it or have been denied credit for some other
7 reason. Otherwise, an individual must pay a fee to
8 review their own personal information.

9 We can save consumers and businesses
10 significant -- quite frankly, a significant amount
11 of headache and money by catching these crimes
12 earlier and by not putting a barrier between
13 consumers and their personal financial information.
14 Many states already allow for one free credit report
15 annually, and we urge that Pennsylvania do the same.

16 We must also put consumers back in
17 control of their personal information by requiring
18 that financial institutions seek affirmative
19 permission before sharing or selling personal
20 financial information beginning in 2004. This is
21 often referred to as opting-in.

22 Current federal law only requires that
23 a financial institution inform a consumer of their
24 right to opt-out of some information-sharing through
25 privacy notices that are mailed annually. However,

1 our research shows that these notices are
2 inadequate. They contain complicated language,
3 small type, very confusing instructions, and the
4 notice of the right to opt-out is buried among pages
5 of text. Clearly, the banks and financial
6 institutions have an interest, a financial interest,
7 in keeping those notices as such.

8 However, Pennsylvania legislators can
9 act to change this policy. While the Federal Fair
10 Credit Reporting Act contains a provision that
11 preempts states from changing this law, that
12 preemption expires in 2004.

13 Banks and other industries are working
14 to convince federal regulators to extend the
15 preemption further and arguing that FCRA needs to be
16 reauthorized in whole. That is actually not the
17 case. If Congress does nothing, only the state
18 preemption piece of the law will expire, giving
19 Pennsylvania the ability to protect consumer privacy
20 further. I urge the Legislature to instruct our
21 Pennsylvania congressional delegation to allow this
22 to occur.

23 Again, thank you for holding hearings
24 on this very important issue. PennPIRG looks
25 forward to working with members of this committee on

1 these issues. I'd be happy to answer any questions.

2 CHAIRMAN HASAY: Thank you, Beth, for
3 your testimony today. It's indeed important. We
4 will be considering a bill that restricts the use of
5 the social security number. We almost did
6 yesterday, except we wanted to have the prime
7 sponsor there for questions for the members of this
8 committee.

9 Any members have any questions?

10 REPRESENTATIVE THOMAS: Yes,
11 Mr. Chairman.

12 CHAIRMAN HASAY: Representative
13 Thomas.

14 REPRESENTATIVE THOMAS: Thank you,
15 Mr. Chairman. One quick question. If I'm not
16 mistaken, California and Illinois both have adopted
17 statutory provisions requiring the use of digital
18 signatures. And digital signatures are becoming a
19 very useful tool in dealing with this whole issue of
20 identity theft.

21 I was wondering if your organization
22 had taken a look at digital signatures or taken a
23 look at certain things, like encryption, or some of
24 the other progressive tools that are available now
25 to the government and also to private companies?

1 MS. McCONNELL: In terms of
2 encryption, I know that that policy has worked quite
3 well, particularly in truncation, as well, of credit
4 card numbers that are printed on receipts, which is
5 kind of another way to look at it. And that's a
6 policy that's been implemented in many other states
7 as well.

8 And both policies, the digital
9 signature as well as some of this encryption, is --
10 well, more the digital signatures is aimed at
11 avoiding or preventing identity theft that occurs as
12 a result of dumpster diving, as it's called, when a
13 thief obtains printed materials from trash cans or
14 steals them.

15 However, I think while that's
16 important, even in this day and age when so much of
17 this information is still stolen -- it's stolen
18 electronically, and hackers are becoming more and
19 more experienced -- there is still some concern for
20 the protection of our privacy, even when information
21 is electronic.

22 And I think what we really need to
23 take a look at more than anything is the sort of
24 information that is collected that's unnecessary.
25 It just doesn't need to be collected. What can we

1 reduce there in terms of that collection? And then
2 on top of that, as you point out, how can we ensure
3 that what we are collecting is protected?

4 I haven't looked specifically at the
5 policies in California or Illinois. I don't know
6 how well they have or haven't been working. But I
7 will say that identity theft is still on the rise
8 despite many efforts to safeguard the information as
9 well as many efforts to prosecute criminals more
10 thoroughly, which is one of the reasons why we would
11 like to reduce the collection of that information.

12 REPRESENT THOMAS: Thank you. If I'm
13 not mistaken, I think in Illinois it seems to be
14 working pretty well around this identity theft
15 issue. As a member of another committee, the
16 Information Technology Committee, about a year ago
17 or a couple years ago, we put out a blueprint in
18 Pennsylvania.

19 And the issue that's in front of us
20 for this term, this whole issue of privacy and how
21 we can use technology to address these concerns of
22 identity theft and the whole area of invasion of
23 privacy, because the Internet allows me to look at
24 all of your personal and business information and do
25 what I want with it without any consequences.

1 So I really thank you for your
2 testimony.

3 MS. McCONNELL: Thank you.

4 CHAIRMAN HASAY: Thank you.
5 Representative Wansacz.

6 REPRESENTATIVE WANSACZ: Thank you,
7 Mr. Chairman.

8 You mentioned here in your testimony
9 that many states already allow for one free credit
10 report annually. Can you give me some states that
11 do that? And also you mentioned to Representative
12 Thomas that businesses collect too much information
13 already. Can you be more specific on what
14 information you think that they collect that is
15 unnecessary?

16 MS. McCONNELL: Sure. Unfortunately,
17 I didn't come prepared with the list of states. But
18 I do know that the state of New Jersey does allow
19 for one free copy of the credit report. I believe
20 the state of Connecticut does as well. I think
21 there are a total of about 11 other states. I would
22 be happy to forward that information to the members
23 of the committee when I return to my office.

24 In terms of the second question, I'll
25 rely -- I guess I'll relay a personal experience. I

1 have many of these shoppers cards in my wallet. And
2 when I go to a CVS or a Super Fresh or other types
3 of stores, they are billed as a way to give you
4 greater discounts. But often what many supermarkets
5 have done across the country is use those shoppers
6 cards to actually track your purchases so they know
7 what you buy. And that allows them to market
8 products to you, whether that's a different brand of
9 shampoo or cereal.

10 Now, a few years ago one individual
11 was purchasing a large amount of alcohol at a
12 supermarket in another state. And he was involved
13 in a rather bitter custody dispute and divorce
14 proceeding. And there was great concern over
15 whether or not that information could be used
16 against him in this particular dispute. And that's
17 just one example.

18 Financial records, financial
19 information, for example, your bank account balances
20 and the types of things that you purchase with your
21 debit card, that information is collected and used
22 by the financial institution to market goods and
23 services to you.

24 They also have the right to share some
25 of that information with affiliates of the company,

1 which is an increasing problem following the passage
2 of the Gramm-Leach-Bliley Act in Congress a few
3 years ago that allowed all these mega-mergers where
4 a bank, a savings bank, and an investment bank and a
5 whole set of other similar institutions can become
6 affiliates of each other and then share personal
7 information about customers among many of these
8 affiliates.

9 That's one of the reasons why shifting
10 the law from an opt-in to an opt-out -- or I'm sorry
11 from opt-out to opt-in is something many states are
12 considering right now. In fact, California voters
13 will be voting actually on a ballot initiative in
14 2004 on this very subject.

15 REPRESENTATIVE WANSACZ: I understand
16 that. I appreciate that opt-in/opt-out.

17 What about when we're dealing with
18 identity theft here? Is there ways that businesses
19 are giving too much information that is allowing
20 people to steal their information? I know with the
21 social security, as Chairman Hasay said, we are
22 going to be dealing with that probably at our next
23 meeting. That is probably one of the ways that we
24 can correct the problem. But is there anything else
25 that we should be looking at?

1 MS. McCONNELL: Well, I think social
2 security numbers obviously is the most important
3 because that is often all a thief needs to open a
4 utility account. And, in fact, if they have that
5 number but don't have your name, you can simply go
6 on-line and for \$30 or \$40 purchase a whole set of
7 other information, including your date of birth and
8 your address and your name and your neighbors' names
9 and every address you have ever lived at and a whole
10 lot of other information. So certainly getting to
11 the social security numbers piece of it is critical.

12 In terms of other sorts of information
13 that we can restrict the collection of -- you know,
14 it's a difficult issue. It's difficult because the
15 genie is out of the bottle, in one respect. But I
16 think as much as we can do to not only educate
17 consumers about their rights to refuse to give
18 certain information but also give them the right to
19 refuse to give information -- I can bring it back to
20 social security numbers -- by prohibiting any entity
21 from refusing goods or services for those people
22 that don't want to provide that number I think is
23 best way to handle this issue.

24 So I'm sorry I can't quite answer your
25 question directly with other sorts of information

1 because I do think that social security numbers is
2 probably the most important.

3 REPRESENTATIVE THOMAS: Mr. Chairman,
4 I have a comment.

5 CHAIRMAN HASAY: Representative
6 Thomas.

7 REPRESENTATIVE THOMAS: If I can
8 comment on both of those situations. I think
9 driver's licenses -- Pennsylvania, I think, has
10 about 180 on-line providers throughout Pennsylvania.
11 And I know of a couple of instances -- in fact, I
12 saw some information on one provider who used the
13 electronic, the on-line service, to access about
14 3,000 drivers' records unknowingly to the drivers.

15 Now, we can speculate on who bought,
16 shared, and transferred that information. And the
17 driver's license is one piece of ID that is commonly
18 accepted in banks and other financial institutions.

19 So I think that there are probably a
20 couple of things we need to do. One is to raise the
21 bar of consequences for participating in a program
22 and then accessing that kind of information. And
23 secondly, that information on the driver's license
24 is probably some information that should be excluded
25 unless required under certain circumstances.

1 In answer to your comment, social
2 security numbers, driver's license numbers, and some
3 other information that comes up on the driver's
4 license.

5 CHAIRMAN HASAY: Your testimony was
6 very interesting. And I'm surprised to see the
7 losses that MasterCard and Visa banks have had.
8 What I do with my mail anymore that has credit card
9 applications, bank statements -- I encourage my
10 constituents when they get their garbage and they
11 get credit card applications or whatever, to put
12 them through a shredder in your house, which I have
13 had for the last couple of years now, just to
14 protect my identity. And I have had my garbage
15 stolen already. There are people out there trying
16 to do that.

17 We had testimony in previous hearings
18 where it's easier for a thief to go through your
19 garbage and get those numbers than to waste his time
20 trying to break into houses and stealing TV sets and
21 computers.

22 So thank you very much today, Beth,
23 for your testimony.

24 MS. McCONNELL: Thank you.

25 REPRESENTATIVE DENLINGER:

1 Mr. Chairman, one quick question.

2 CHAIRMAN HASAY: One final question.
3 Representative Denlinger.

4 REPRESENTATIVE DENLINGER: Thank you,
5 Mr. Chairman.

6 I was just wondering, you highlighted
7 5,080 cases were identified last year. And I'm just
8 interested in knowing, is there a breakdown on that
9 between high-tech means of capturing data and
10 low-tech, such as going through garbage? Do you
11 have any percentage on that?

12 MS. McCONNELL: Those come from the
13 Federal Trade Commission. They are consumer reports
14 that they publish annually on a whole set of
15 different types of fraud. They do not break down
16 the identity theft cases by the method in which the
17 thief obtained that information because,
18 unfortunately, the thieves are not very forthcoming.
19 So it's hard to know.

20 The way that they gain that
21 information is from the victims who have reported, I
22 have had my identity stolen, but they don't know
23 how. And because it's often been many years and the
24 thief has opened many different types of accounts
25 maybe under many different types of names and many

1 different locations, it's very hard to track it back
2 to that original incident. And that's also why it's
3 very hard for law enforcement to resolve some of
4 these cases.

5 But one thing actually I will comment
6 on is something, of course, that you can encourage
7 constituents to realize is that there actually is an
8 800 number that consumers can use to opt-out of
9 having unsolicited credit card applications being
10 sent to their home. It's 1-888-5optout. And by
11 putting your name on that list, it will stop any
12 credit card company from sending these
13 solicitations. But that's all it does is stop the
14 unwanted credit card solicitations. It doesn't
15 prevent the sharing or trading or selling of your
16 personal information in any other way.

17 REPRESENTATIVE DENLINGER: Could you
18 give us that phone number again?

19 MS. McCONNELL: 1-888-5optout,
20 o-p-t-o-u-t.

21 REPRESENTATIVE DENLINGER: Thank you.

22 MS. McCONNELL: Sure.

23 CHAIRMAN HASAY: Thank you, Beth.

24 MS. McCONNELL: Thank you.

25 CHAIRMAN HASAY: Next we have Rob

1 Fisher, who is the senior vice-president of Credit
2 and Call Center Operations of Boscov's. And also
3 with him is Brian Rider, vice-president of
4 Government Affairs of the Pennsylvania Retailers
5 Association.

6 Gentlemen, welcome. You can start at
7 your own pleasure.

8 MR. RIDER: Chairman Hasay and
9 Chairman Caltagirone and committee members, thank
10 you for the opportunity to be here today.

11 Mr. Fisher has prepared testimony.
12 But before that, I just want to make a couple of
13 brief comments. One, other than the freshmen
14 members on this committee, the members of the
15 Pennsylvania General Assembly last legislative
16 session did enact and approve -- and it was signed
17 by the Governor -- two pieces of legislation: One,
18 making identity fraud a crime in Pennsylvania and
19 the other legislation outlining the specifics of
20 what details or constitutes identity fraud. And
21 Representative Matt Baker, your colleague, was the
22 prime sponsor of the House Bill, who is also a
23 victim of identity fraud personally; and Senator
24 Stewart Greenleaf was the prime sponsor of the other
25 vehicle. So I did want to bring that to your

1 attention, especially for the freshmen members, that
2 Pennsylvania does currently have ID fraud law.

3 So with that, I will turn this over to
4 Mr. Fisher. And I think, following his prepared
5 remarks, he would like to make some comments
6 responding to some of the comments that
7 Ms. McConnell made, if that's the committee's
8 pleasure.

9 Thank you.

10 MR. FISHER: Good morning.

11 Mr. Chairman and committee members, thank you for
12 the opportunity to present testimony today. My
13 name is Rob Fisher. I'm vice-president of Credit
14 and Call Center Operations for Boscov's department
15 stores. I'm testifying today on behalf of the
16 Pennsylvania Retailers' Association. I would like
17 to thank Chairman Hasay and Chairman Caltagirone and
18 the members for providing me the opportunity to
19 testify before the House Commerce Committee.

20 Boscov's is a Mid-Atlantic department
21 store chain. In addition to stores in Maryland and
22 New Jersey, we have three stores in Delaware, three
23 stores in New York, and more than two dozen stores
24 in our home state of Pennsylvania.

25 Boscov's employs over 10,000 people.

1 As the third largest industry in Pennsylvania,
2 retailers employ over 1.25 million people earning
3 more than \$25 billion in wages. The PRA is the
4 Commonwealth's oldest and most successful retail
5 trade association. The retail industry in
6 Pennsylvania is comprised of approximately 30,000
7 establishments employing nearly 300,000.

8 As towns and cities grew in
9 Pennsylvania, retailers began using their local
10 merchants associations as a trusted repository for
11 information about the customers with whom they
12 dealt. In order to access these customer files, the
13 merchant had to be willing to place his own
14 information into the system.

15 There was a strong incentive to be
16 accurate and careful with what you put in because
17 you expected the same care from the other merchants
18 with whom you were sharing. Trust and integrity
19 were important. Eventually the merchants
20 associations were merged or sold and became part of
21 the credit reporting system we have today.

22 Boscov's currently has 1.1 million
23 active credit card accounts. During the peak
24 holiday season, about 600,000 of these customers use
25 their Boscov's card and receive credit card

1 statements from us. As many of you know, consumers
2 often use retail credit as their gateway into the
3 larger credit market. It is very common for a
4 Boscov's card to be the first credit card in a
5 customer's wallet. By building a good credit
6 relationship with us, they help build a good credit
7 file with the credit bureaus. This, in turn, makes
8 them eligible for other credit products, such as a
9 car loan or even a first mortgage.

10 The history and success of retail is
11 inextricably intertwined with credit granting in
12 this country. Today, nearly 80 percent of purchases
13 made at Boscov's stores are some type of credit
14 card, be it Visa, MasterCard, Discover, or the
15 Boscov's card. In 2002, consumer spending
16 represented two-thirds of the Gross Domestic
17 Product. If you do some simple calculations, you
18 realize that most of the transactions in our economy
19 don't happen in cash. They happen on credit.

20 Mr. Chairman, as you know, it is
21 consumer spending that has served as the ballast in
22 an otherwise unstable economic environment.
23 Consumers are taking advantage of quick, low-cost
24 credit at record rates, from first-time home
25 mortgages and mortgage refinancings to car loans and

1 other consumer credit transactions.

2 In fact, our credit card center is
3 also a call center where customers can work out
4 issues such as merchandise delivery problems, place
5 phone orders, seek assistance with Internet orders,
6 and ask a whole host of questions about our
7 products, services, and promotions. They can even
8 opt-out of our mailing lists for catalogs,
9 promotions, and store coupons if they so choose.

10 This is all made possible by
11 information-sharing in the retail environment.
12 Through information-sharing, we can not only market
13 more specifically to our customers and meet their
14 needs, but we can also do other things such as
15 underwrite more credit and combat identity theft in
16 our stores.

17 As you know, identity fraud is one of
18 the fastest growing and most troublesome crimes in
19 the United States. At Boscov's we have implemented
20 a number of safeguards to help protect our business
21 and our customers. As you will see, many of these
22 procedures rely directly on the sharing of
23 information.

24 When a customer applies for a Boscov's
25 charge card in one of our stores, they must present

1 a current, valid state or federally issued picture
2 ID, such as a driver's license or passport. When we
3 pull the customer's credit bureau report, we
4 determine if the name, address, social security
5 number, and various other characteristics given by
6 the customer match both the information on the ID
7 presented and the information contained in the
8 credit reports and also to request human review for
9 any credit bureau report that contains a written
10 consumer statement. Questionable applications are
11 referred for further processing to ensure that the
12 applicant is, in fact, who they purport to be.

13 ID fraud prevention does not stop when
14 the credit application is approved. Many retailers
15 have models or neural networks that identify unusual
16 purchasing behavior. For example, if we see an
17 account that is normally only used for small
18 purchases suddenly being used to make large,
19 high-risk purchases on-line using a different
20 shipping address, our systems will flag the
21 transaction as highly suspicious and it will be
22 referred to a special unit for investigation.

23 Beyond these complex technical systems
24 to identify potentially fraudulent purchases,
25 perhaps the retailer's best weapons in fraud

1. prevention are our employees. Last week in the
2 Washington, D.C., area, one of the largest ID
3 fraud/credit card fraud rings was arrested.

4 A Target store employee who noticed a
5 customer making unusual purchases with multiple
6 credit cards tipped off the authorities. The police
7 discovered credit card production equipment and
8 lists containing the names, account numbers, and
9 expiration dates for over 10,000 Visa/MasterCard
10 accounts.

11 Boscov's employees have worked
12 together to identify sets of transactions being
13 shipped to a self-storage unit in southern Florida.
14 When police arrived, they discovered a vast array of
15 merchandise from multiple mail-order and Internet
16 sites. On a weekly basis, we identify transactions
17 that are fraudulent and notify the consumer
18 involved, the creditor, and/or the police, when
19 appropriate. We have dozens of apprehensions and
20 convictions to our credit.

21 We also have a number of customers who
22 either have in the past been victims of identity
23 fraud or who believe they are likely to be victims.
24 For these customers, we program our register system
25 to immediately refer the sale to our credit center.

1 Here we will verify the customer's identity via a
2 valid ID or password.

3 Sadly, ID fraud continues to grow and
4 affect both of its victims, the merchant and the
5 customer. It is important to understand that in
6 virtually every case of identity theft, the retailer
7 bears the burden of the financial loss, either
8 through credit write-offs on our own accounts or in
9 chargebacks on third-party transactions.

10 In addition to the direct financial
11 loss, the retailer bears other costs associated with
12 ID fraud and credit card fraud. These include
13 payroll and benefits for customer service
14 representatives to help consumers understand their
15 rights and to guide them through the process of
16 getting their credit bureau reports corrected, loss
17 of consumer confidence in the credit system, and
18 related lost sales.

19 Our losses from ID fraud continue to
20 grow year after year despite our best efforts. We
21 are constantly challenged to find new patterns in
22 our many data sources that will help us identify
23 fraudulent transactions without inconveniencing our
24 legitimate customers. The ability to share,
25 aggregate, and search affiliate and third-party data

1 sources is paramount in the effort to protect
2 Boscov's and our valued Boscov's customers.

3 In closing, I would again like to
4 emphasize the retail industry's strong support for
5 internal measures to prevent and minimize ID fraud
6 and credit card fraud.

7 Mr. Chairman and members of the
8 committee, consumers have come to expect instant
9 access to credit when purchasing everything from an
10 automobile to consumer goods such as furniture,
11 appliances, and apparel. In the final analysis, we
12 in the retail industry have a real concern that
13 without better federal and state safeguards for
14 issuing identifying documents, without a structure
15 for more cohesive police support at the local,
16 state, and federal level, ID fraud will continue to
17 grow and both of its victims, retailers and our
18 customers, will continue to suffer.

19 Thank you again for the opportunity to
20 testify today. I look forward to working with the
21 members of the House Commerce Committee as you
22 continue your efforts to reduce ID fraud. I am
23 happy to answer any questions that you may have at
24 this time.

25 CHAIRMAN HASAY: Thank you, Mr. Fisher

1 and Mr. Rider.

2 Questions? Representative Yewcic.

3 REPRESENTATIVE YEWIC: Thank you.

4 Real quick, you mentioned something about
5 information-sharing within Boscov's. Is that
6 information internal? Does Boscov's sell
7 information to other retailers?

8 MR. FISHER: Part of the privacy
9 legislation that was passed federally, called the
10 Gramm-Leach-Bliley Act, all financial institutions
11 have to provide a privacy disclosure. As part of
12 our privacy disclosure, we do state that we may
13 share that information. We may share public and
14 private customer information. The consumer does
15 have the opportunity to opt-out of that at any time.

16 I can tell you that other than
17 internally supportive programs to where there is not
18 necessarily a sale of information but we're
19 utilizing a third party to help us sell some
20 additional merchandise, we don't do any sale. We
21 don't profit by selling our customer information.

22 REPRESENTATIVE YEWIC: When you do
23 your ads and promotions, which my wife likes to
24 receive -- I can say that because she's not here --
25 you contract that out for other printing?

1 MR. FISHER: We do some of it
2 internally and some of it we do use a partner for
3 outsourcing, yes.

4 REPRESENTATIVE YEWIC: When you do
5 that, is that a confidential mailing list or can
6 they use those for other customers?

7 MR. FISHER: No. As part of the
8 Gramm-Leach-Bliley Act, we actually make our vendors
9 sign a privacy disclosure that says that they agree
10 not to use our information for anything other than
11 what it was given to them for.

12 REPRESENTATIVE YEWIC: Thank you,
13 Mr. Chairman.

14 CHAIRMAN HASAY: Any other questions?
15 Gentlemen, thank you very much for your testimony.
16 And we're hoping that the ID theft bills that are in
17 the House Judiciary Committee and also the social
18 security number restriction bill that is in this
19 committee will be taken up shortly.

20 Thank you again for your testimony.

21 MR. RIDER: Thank you.

22 MR. FISHER: Thank you.

23 CHAIRMAN HASAY: Thank Mr. Boscov on
24 behalf of the committee as well.

25 MR. FISHER: Okay.

1 CHAIRMAN HASAY: Our next witness we
2 have is Lieutenant George Bivens from the
3 Pennsylvania State Police. You can proceed at your
4 own convenience.

5 MR. BIVENS: Good morning,
6 Mr. Chairman and members of the committee. I am
7 Lieutenant George L. Bivens, Commander of the
8 Organized Crime Section within the Bureau of
9 Criminal Investigation for the Pennsylvania State
10 Police. On behalf of Colonel Jeffery B. Miller,
11 Commissioner of the Pennsylvania State Police, I
12 would like to thank the House Commerce Committee for
13 this opportunity today to speak on the issue of
14 identity theft.

15 Identity theft is delineated in Title
16 18, the Pennsylvania Crimes Code, Section 4120.
17 This statute indicated a person commits the offense
18 of identity theft of another person if he possesses
19 or uses, through any means, identifying information
20 of another person without consent of that other
21 person to further any unlawful purpose.

22 The unlawful activity could involve a
23 criminal utilizing a victim's personal information
24 in order to obtain access to loans, credit or debit
25 cards, bank accounts, services such as telephone or

1 cable, or personal property ranging from groceries
2 to automobiles.

3 Following the tragic events of
4 September 11, 2001, law enforcement must also
5 consider the use of another person's identifying
6 information by criminals or terrorists in an attempt
7 to gain access to restricted areas or information in
8 order to further their criminal enterprise.

9 In recent years, the crime of identity
10 theft has grown in scope with the advent of the
11 inexpensive personal computer. Those criminals
12 possessing familiarity with computers now have
13 powerful resources at their disposal. By obtaining
14 personal biographical and financial information,
15 which is readily available on the Internet, an
16 identity thief can pose as anyone.

17 Additionally, by utilizing the wide
18 range of high-quality computer peripherals
19 available, they are able to craft documents and
20 identification, which allow them to create new
21 identities or steal the identity of someone else.

22 Another computer-aided method of
23 committing identity theft is known as skimming.
24 Skimming is the practice of reading and storing the
25 magnetic information on a debit or credit card. The

1 skimmed information is then re-encoded onto a blank
2 card having a magnetic strip, thereby creating a
3 duplicate of the victim's card.

4 Conversely, the technologically
5 challenged identity thief continues to resort to
6 time-tested low-tech methods for obtaining the
7 personal information of a victim. Stealing mail and
8 digging through garbage generally provides the
9 criminal with extensive personal information to
10 include the victim's full name, date of birth,
11 social security number, bank account information,
12 utilities account information, address, and
13 telephone number. Armed with this knowledge, the
14 identity thief is ready to apply for credit or
15 access funds in the name of the victim.

16 Currently, the best source for
17 documented statistical information concerning the
18 problem of identity theft is the Federal Trade
19 Commission. The FTC has been maintaining data and
20 information regarding this crime since enactment of
21 the Identity Theft and Assumption Deterrence Act in
22 1998. In furtherance of this Act, the FTC developed
23 the Identity Theft Data Clearinghouse and its
24 reporting vehicle, the Consumer Sentinel.

25 To quantify the problem of identity

1 theft, the following information is provided from
2 the Consumer Sentinel:

3 Of 380,103 fraud complaints received
4 nationally in 2002, the largest category of
5 complaint was identity theft at 43 percent.

6 The financial costs to victims of all
7 fraud reported in the nation during the year 2002 is
8 estimated at nearly one-half billion dollars. And
9 43 percent of this figure would indicate identity
10 theft nationwide cost victims approximately \$200
11 million.

12 Individual victim cost per fraud is
13 estimated at \$2,000.

14 National reporting of identity theft
15 has steadily increased since the year 2000. In
16 2000, which represents the first full year of
17 reporting, 31,117 reports were received. During
18 2001, 86,198 reports were received. This increase
19 indicates a 177 percent change over the previous
20 year. Finally, in 2002, 161,819 reports were
21 received, which represents an 88 percent increase
22 over the year 2001.

23 In the year 2002, 75 percent of
24 victims were between the ages of 18 and 49.

25 Of 13,119 fraud complaints received in

1 Pennsylvania during 2002, the largest category of
2 complaint was identity theft at 39 percent of all
3 complaints.

4 In 2002, Pennsylvania ranked 22nd
5 among states for victims of identity theft for
6 100,000 population, with 5,080 victims reported.

7 The top three crimes committed in
8 concert with an identity theft in Pennsylvania
9 during 2002 were credit card fraud with 2,359
10 victims, phone or utilities fraud with 1,103
11 victims, and bank fraud with 623 victims.

12 The top three victim locations for
13 identity theft in 2002 were Philadelphia with 1,202
14 victims, Pittsburgh with 226 victims, and Allentown
15 with 70 victims.

16 Continuing, in an effort to quantify
17 this problem, since the inception of the
18 Pennsylvania statute regarding identity theft in
19 2001, the Pennsylvania State Police have received
20 714 complaints involving this crime. And 302 were
21 received in the year 2001, while 412 were received
22 in 2002. This alone represents a 27 percent
23 increase.

24 This data provides a general overview
25 of the raw, cold statistical information regarding

1 the crime of identity theft. What it does not
2 provide is insight into the associated emotional
3 problems victims of this crime encounter. Many
4 individuals do not discover they are the victim of
5 identity theft for months, if not years. Some
6 victims have been duped for as long as five years.

7 Upon discovery, victims must spend
8 significant amounts of time contacting creditors and
9 credit reporting agencies in an attempt to repair
10 the damage to their credit histories. While this is
11 occurring, they are often unable to obtain credit
12 and financial services, telecommunication and
13 utility services, and even employment. Many victims
14 report having wages garnished and tax refunds
15 withheld.

16 In those instances when an identity
17 thief has received a criminal record in the victim's
18 name, victims have reported having licenses revoked,
19 failing background checks, and even being arrested
20 or detained.

21 Combating the crime of identity theft
22 in Pennsylvania requires law enforcement to achieve
23 three main objectives:

24 First, law enforcement personnel must
25 be properly trained and informed regarding this

1 crime.

2 Second, they must be appropriately
3 staffed with criminal investigators to conduct these
4 sometimes in-depth and lengthy investigations.

5 Finally, the public needs to be
6 provided with information concerning methods to
7 protect themselves from identity theft as well as
8 information regarding the steps to take should they
9 become a victim. Each of these objectives will be
10 explored more fully.

11 In Pennsylvania, the state police are
12 tasked with providing police services to those areas
13 and citizens who find themselves without their own
14 police department. We are a full-service
15 department, performing functions ranging from
16 traffic enforcement to criminal investigations.

17 Our criminal investigators are
18 responsible for the investigation of all types of
19 crime. As such, our investigators must receive
20 training and obtain expertise in all facets of
21 criminal investigations.

22 Training specific to identity theft
23 and fraud is available to them and Pennsylvania's
24 law enforcement community through numerous sources.
25 Some examples are, the Pennsylvania State Police

1 Academy, the Mid-Atlantic Great Lake Organized Crime
2 Law Enforcement Network known as MAGLOCLLEN, the
3 National White Collar Crime Center, International
4 Association of Financial Crimes Investigators, the
5 U.S. Department of Justice, and local banking
6 institutions.

7 Generally, individual instances of
8 identity theft are investigated by a criminal
9 investigator assigned to one of our troop commands.
10 In those instances when a case of identity theft is
11 indicative of organized criminal activity, the
12 Pennsylvania State Police rely upon the Organized
13 Crime Division of the Bureau of Criminal
14 Investigation.

15 Members of this specially selected
16 group of investigators are strategically located in
17 task forces throughout Pennsylvania. They work with
18 their troop counterparts as well as local and
19 federal investigators on cases involving large
20 monetary losses, which are usually associated with
21 organized groups of criminals. These groups may be
22 associated with traditional organized crime,
23 displaced ethnic groups, or simply enterprising
24 local criminals.

25 In an attempt to deter or mitigate the

1 crime of identity theft, the Pennsylvania State
2 Police provide the following information to law
3 enforcement agencies and the general public:

4 First, how do I protect myself? These
5 and other protective measures will not absolutely
6 guarantee you will never become a victim of identity
7 theft, but employing one or more of these can
8 drastically reduce your risk.

9 Give your social security number only
10 when it is absolutely necessary and do not carry
11 your social security card with you. Leave it at
12 home or in a secure place.

13 Periodically request a free copy of
14 your social security personal earnings and benefit
15 statement from the Social Security Administration,
16 1-800-772-1213.

17 Memorize your ATM password and shield
18 the keypad when entering your password at ATM
19 machines.

20 Do not place bill payments in your
21 mailbox for pickup. Mail your bills directly from
22 the post office.

23 Shred all documents containing
24 personal information, especially bills, credit card
25 receipts, pre-approved credit card offers, and bank

1 statements, before you throw them away.

2 Annually obtain a copy of your credit
3 report from the three major credit reporting
4 agencies: Trans Union, 1-800-680-7289; Equifax,
5 1-888-766-0008; and Experian, 1-888-397-3742.

6 Immediately correct all mistakes
7 identified on your credit reports in writing.
8 Approximately 70 percent of all credit reports
9 contain some erroneous information.

10 Have your name removed from lists sold
11 to companies offering pre-approved credit cards by
12 contacting the three credit reporting agencies and
13 taking advantage of their opt-out service. One
14 number, 1-888-567-8688, reaches all three agencies.

15 Do not give your credit card number
16 over the telephone unless you have initiated the
17 call. Ensure that neither you nor the called party
18 is using a mobile or cellular telephone.

19 When you purchase items with a credit
20 card, take your receipts with you; do not toss them
21 away.

22 Do not put your credit card number on
23 the Internet unless it is an encrypted or secured
24 site.

25 What if I become a victim of identity

1 theft? Identity theft can occur even if you have
2 been careful about protecting your personal
3 information because of the ever-increasing skill
4 employed by professional thieves. The exact steps
5 that you should take after becoming a victim of
6 identity theft will vary depending upon your
7 circumstances; but in most instances, the following
8 steps should be taken.

9 Contact the security department of the
10 respective financial institution, both verbally and
11 in writing, for each account that has been opened or
12 tampered with and close these accounts. The federal
13 Fair Credit Billing Act limits your liability for
14 unauthorized charges to \$50, but it's your
15 responsibility to make the appropriate notification
16 in writing within 60 days after the fraudulent
17 activity has been discovered. Once the financial
18 institution acknowledges the fraud, ask them to send
19 all three credit reporting agencies a letter
20 confirming fraudulent activity.

21 In the past, one necessary step
22 included contact with each of the nation's three
23 major credit reporting agencies, Trans Union,
24 Equifax, and Experian. In an effort to streamline
25 the process, the credit reporting agencies have

1 agreed to begin sharing fraud-related information.
2 As of April 15, 2003, identity theft victims need
3 only make one toll-free call to any of the three
4 nationwide credit reporting agencies. The
5 information they provide will be automatically
6 shared with the remaining agencies for inclusion in
7 their records.

8 Within 24 hours of being notified,
9 each credit reporting agency will post a security
10 alert on the victim's credit file, which will be
11 viewed by all lenders or other users accessing
12 future reports. The alert will notify lenders of
13 the reported fraud, thereby assisting them to avoid
14 opening a fraudulent account in the victim's name.
15 The credit reporting agencies will also remove the
16 victim's name from the lists of pre-approved credit
17 or insurance offers for a period of two years.

18 Additionally, the agencies have agreed
19 to provide each victim with a copy of his or her
20 credit file and to simplify the
21 information-verification process to include deletion
22 of fraudulent information.

23 File a complaint with your local
24 police department or the law enforcement agency
25 where the identity theft took place. Also, file a

1 complaint with the Federal Trade Commission Identity
2 Theft Hotline by telephone at 1-877-IDTHEFT.

3 Although the FTC has no criminal law enforcement
4 authority, they can pursue civil remedies and assist
5 victims in resolving the problems associated with
6 the crime.

7 Report the fraudulent use of your
8 social security number to the United States Social
9 Security Administration at 1-800-269-0271. Under
10 certain circumstances, a new social security number
11 may be issued.

12 Notify your nearest United States
13 Postal Inspection Service if you suspect the theft
14 of your mail.

15 If your ATM card has been lost or if
16 your password has been compromised, immediately
17 notify your bank. The Electronic Fund Transfer Act
18 limits your losses to \$50 if you make this report
19 within two business days. If you wait more than 60
20 days to make the report, you could lose all the
21 money that was taken from your account.

22 If checks were stolen or fraudulent
23 bank accounts were established, report this to your
24 bank and to the major check verification companies,
25 Telecheck, 1-800-366-2425; Certegy/Equifax,

1 1-800-437-5120; Global Payments/CheckRite,
2 1-800-766-2748. Request they notify retailers who
3 use their service that you were the victim of
4 identity theft.

5 If you're a victim of identity theft,
6 never agree to pay any portion of the debt just to
7 get collection agencies off the case. The Fair Debt
8 Collection Act prohibits collectors from contacting
9 you if within 30 days after you receive their
10 written notice, you send them a letter refuting the
11 debt. Along with your letter, send supporting
12 documentation, police report, letters from credit
13 reporting agencies, etc., to substantiate your
14 position.

15 Unfortunately, it is impossible to
16 protect yourself entirely from identity theft, but
17 following the safeguards detailed herein can
18 certainly reduce your risk. Publications by the
19 Federal Trade Commission can provide further
20 information on how to prevent identity theft. These
21 publications can be obtained by contacting the FTC
22 by telephone at 1-877-IDTHEFT or by visiting their
23 websites at <http://www.ftc.gov> or
24 <http://www.consumer.gov>. Phone counselors at the
25 FTC can assist callers on how to take advantage of

1 their consumer rights and on what actions need to be
2 taken to restore their credit.

3 Additionally, the Pennsylvania State
4 Police provides numerous other services to
5 Pennsylvania's citizenry and law enforcement
6 community in dealing with the problem of identity
7 theft. The Bureau of Forensic Services offers
8 examination of questioned documents, handwriting
9 comparisons, and patent and latent fingerprint
10 identification and comparison.

11 The Polygraph Unit in many instances
12 is required to determine the veracity of involved
13 suspects. The Community Services Unit performs
14 speeches and provides information to community
15 groups concerning how to reduce the probability of
16 becoming a victim of this type of crime. The Bureau
17 of Criminal Investigation provides briefs, which
18 provide information concerning prevention and
19 response methods for crimes such as identity theft.

20 Finally, with the advent and ease of
21 access to computer technology, the State Police Area
22 Computer Crime Task Forces have become an invaluable
23 resource to Pennsylvania law enforcement,
24 particularly in those instances when a computer has
25 been utilized in some way to steal an individual's

1 identity or commit a crime utilizing another's
2 identity.

3 As you can see, the Pennsylvania State
4 Police brings a wide variety of investigative
5 resources to combat the evolving problem of identity
6 theft in the Commonwealth. Through experience, we
7 have learned to utilize and share these resources
8 with local, state, and federal investigators. Only
9 by sharing resources and staying ahead of the
10 criminal mind will we be effective in this
11 crime-fighting effort.

12 Finally, recent legislative changes to
13 Pennsylvania's Identity Theft Statute have made
14 investigation and prosecution for this crime a more
15 efficient and effective process. Penalties have
16 been stiffened and venue now includes the residence
17 or employment address of the person whose
18 identifying information has been lost or stolen or
19 has been used without the person's consent. The
20 clarification of venue is particularly important, as
21 many of the crimes associated with identity theft
22 occur in other jurisdictions, states, or countries.

23 In closing, I would like to thank
24 Chairman Hasay and the members of the committee for
25 the opportunity to address you today on this issue.

1 As a member of the Pennsylvania State Police, each
2 officer carries on a tradition of excellence begun
3 in the year 1905. As part of this tradition, it is
4 the mission of each member to effectively
5 investigate crime and criminal activity, provide
6 investigative assistance and support to all law
7 enforcement agencies within the Commonwealth, and
8 promote public awareness concerning personal
9 responsibility regarding crime reduction. This
10 includes the crime of identity theft.

11 I welcome the opportunity to respond
12 to any questions or comments you may have.

13 CHAIRMAN HASAY: Thank you,
14 Lieutenant, for your testimony today. It was very
15 interesting. The phone numbers that they have up
16 there are very interesting. I intend to put a press
17 release out on your testimony because I think those
18 phone numbers are important. ID fraud is on the
19 rise. It's just really rising. The public is going
20 to have to be aware of their trash and what they do
21 with some of the other stuff.

22 Some members have some questions.
23 Representative Denlinger first.

24 REPRESENTATIVE DENLINGER: Thank you
25 Mr. Chairman. Thank you very much for your

1 testimony. It's very helpful.

2 I'm just thinking through what has
3 been presented here. Most of it deals with
4 individuals and what can be done by the individual
5 and what you do in relation to them. Not much is
6 covered in relation to the business community. And
7 they have a huge vested interest in making sure
8 that, from their aspect, when security is breached
9 in high-tech-type identity theft that they learn
10 about that and that they take steps to correct
11 internally whatever breach has occurred.

12 To what extent does the state police
13 notify businesses, get in touch with them, to let
14 them know that, in fact, a breach has occurred and
15 perhaps even suggest steps that could be taken to
16 correct or remedy that problem?

17 MR. BIVENS: Anytime that we would,
18 through the course of an investigation, discover the
19 source of information that has been stolen or
20 misused, we would then go back to that source,
21 whether that be an on-line company, whether it be a
22 business, a bank, whatever. We would go back to
23 them and, first of all, notify them that information
24 had been taken from them and misused.

25 And secondly, if we are able to obtain

1 information specific to how that information was
2 taken or misused, we would provide that to them.
3 And we have our Computer Crime Task Force that is
4 very knowledgeable. And if there was a hacking
5 incident or anything, they would be able to provide
6 them specific information about how that data had
7 been obtained.

8 REPRESENTATIVE DENLINGER: Very good.
9 Thank you.

10 CHAIRMAN HASAY: Representative
11 Nailor.

12 REPRESENTATIVE NAILOR: Thank you,
13 Mr. Chairman. Thank you, Lieutenant. I appreciate
14 your testimony.

15 One thing that really jumped out at me
16 here is that approximately 70 percent of all credit
17 reports contain some erroneous information. Now, I
18 don't know if the majority of the people in
19 Pennsylvania go out and check their credit reports.
20 I have not done that on myself. So I assume a lot
21 of people probably have not done that.

22 That would be instrumental in catching
23 these ID thefts at some point rather than letting
24 them go on for some extended period. As was said
25 earlier, that would be a good idea. It was

1 suggested by the first presenter, Ms. McConnell,
2 that a free annual credit report go out to credit
3 card holders.

4 Now I see Mr. Rider shaking his head.
5 I know you are not up here now, but I did want to
6 know what your position was because it has also been
7 reported that you're taking the biggest hit many
8 times on these identify thefts on products being
9 stolen. In fact, the retailers will take the hit.

10 Do you oppose an annual credit report?

11 MR. RIDER: The problem with that,
12 Representative, the bureaus and the credit rating
13 retailers and regional chains like Boscov's have a
14 close working relationship with the bureaus. The
15 problem philosophically with asking one of the large
16 three credit reporting agencies and bureaus to
17 provide a free report is that's what they are in the
18 business to do. They are for-profit entities.

19 And that would be like going in to see
20 your chiropractor and asking for one free adjustment
21 each year or going into the supermarket and say, I
22 would like a free loaf of bread each year or going
23 to your jeweler and saying, I would like a free
24 wristwatch.

25 And that's what these businesses are

1 in business to do, to provide credit reports not
2 only to other for-profit businesses but to consumers
3 who go in and purchase that information. That's
4 philosophically the opposition with the proposal of
5 having to provide a free credit report annually to
6 any consumer that requests it.

7 REPRESENTATIVE NAILOR: I understand.
8 And I agree with you. Philosophically I do agree
9 with you. But when this comes up and they are
10 telling me, we are passing this information around
11 to people and 70 percent of it has erroneous
12 information in it, we are telling people about you
13 with erroneous information and if you want it, you
14 have to buy it --

15 MR. RIDER: I'm happy to go back to
16 the three majors and ask them, with respect to the
17 Lieutenant here, about that rate of inaccuracy. I
18 have a feeling that the bureaus may dispute that.
19 Again, I will definitely follow up on that for you.

20 REPRESENTATIVE NAILOR: Do you know
21 where that 70 percent came from?

22 MR. BIVENS: I believe that was from
23 the FTC statistics that they provide. And I would
24 also say, sir, that I'm sure that within that 70
25 percent, there are a number of minor errors but

1 errors nonetheless.

2 And to back up just a minute with
3 regard to people obtaining a copy of their credit
4 rating, from a law-enforcement perspective, whether
5 it's free or whether a consumer has to pay for that,
6 it's in their best interest. And we advocate that
7 people do obtain a copy.

8 REPRESENTATIVE NAILOR: Right.

9 MR. BIVENS: Perhaps a minor error
10 will not impact them in any way. But, as I
11 testified, there are people who have become victims
12 and who have not discovered it for months or years.
13 And certainly periodically looking at that report
14 would allow them to detect some unusual activity,
15 something that they did not personally engage in.

16 REPRESENTATIVE NAILOR: And I realize
17 it's two different extents but I'm just concerned
18 that 7 out of every 10 reports that are being passed
19 throughout the business community about me or my
20 neighbors could be incorrect in some manner.

21 What does it cost to get a report like
22 that, for an individual to go and get a report like
23 that? Do you have any idea?

24 MR. BIVENS: I don't know.

25 REPRESENTATIVE NAILOR: Brian, do you

1 know?

2 MR. RIDER: Generally it will run
3 between \$10 and \$20 for an individual to put in a
4 request for a copy of the report.

5 REPRESENTATIVE NAILOR: Thank you,
6 gentlemen. Thank you, Mr. Chairman.

7 CHAIRMAN HASAY: Lieutenant Bivens,
8 thank you very much for your testimony today. It's
9 been very helpful. And we are going to get some of
10 that information out to the public. And thank the
11 Commissioner on behalf as well.

12 MR. BIVENS: I will, sir. Thank you.

13 CHAIRMAN HASAY: Next is Edward
14 Bianco, who is a CPA and comptroller with the
15 Attorney General's Office. You may begin at your
16 pleasure.

17 MR. BIANCO: Thank you. Mr. Chairman
18 and committee members, thank you for the opportunity
19 to share with you the experience as a victim of
20 identity theft. I sat here and listened to some of
21 the testimony and I thought it was very excellent,
22 especially the one given by the state policeman.

23 I'm here, kind of, under a different
24 type of scenario. Most people don't even know that
25 identity theft is being committed against them for

1 quite a while. I happen to be lucky in the sense
2 one day I was sitting at work and I get this call
3 from Sears that somebody is coming in to apply for a
4 credit card at Sears. And the information didn't
5 match up. So Sears was pretty proactive. And I was
6 lucky because I had an account there for about 25
7 years and it just didn't match up to the information
8 given. So they alerted me to the potential fraud.

9 And as I was sitting there, I really
10 didn't think too much about it because being a CPA
11 and being an accountant and knowing how business
12 operates, if people can't prove that you really
13 purchased something, then you're really not going to
14 be out something in the long run.

15 And even though I did know about
16 identity theft -- and this was a few years ago
17 before this was really hitting the news real heavy
18 -- I didn't think too much of it. But some of my
19 friends said, you know, Ed, I think you ought to pay
20 some attention to this.

21 So I had a contact at our credit union
22 that I called. And she said, no, Ed, this could be
23 very serious. She still didn't get my attention to
24 the point where it should have been at a high level.
25 She said, Ed, let me do something. She went to her

1 computer and pulled up my credit report. She said,
2 Ed, there is a problem here. I think you need to
3 review this.

4 I said -- being a little anxious then
5 -- well, what do you mean? And she said, well, Ed,
6 they have changed your address recently. And they
7 have changed your employment. And I said, well, why
8 is that a big problem if it's a fraud being created
9 or whatever? So they said, I'll drop the credit
10 report off to your house tonight. They said, have
11 you noticed you have been getting mail? And I said,
12 yeah, I've been getting mail. I haven't really
13 looked at every piece. This was in my report that
14 started at the 30th of the month.

15 So at that point we went into the
16 different accounts. She also put me in touch with
17 the postal inspector out of Philadelphia since the
18 address was down there. And at that point, the
19 postal inspector thought it was very serious what
20 was going on.

21 And what had culminated at that point
22 when I got the credit report, we noticed that not
23 only credit cards were applied for and credit
24 granted, but people were starting to buy products,
25 computers, other types of equipment. And in this

1 case, I actually found where a piece of equipment
2 worth about \$20,000 was going to be delivered to
3 this Philadelphia address under my name.

4 So I got ahold of the postal inspector
5 again and I said, what can we do? So he said, let's
6 try a controlled delivery. So they took possession
7 and took everything out of my hands. They did a
8 controlled delivery and arrested the individual at
9 the scene.

10 The problem was he was just a small
11 person in this whole incident. There was other
12 obvious criminal activity behind him perpetrating
13 these types of credit fraud. He was just one in the
14 situation. But they arrested him. And I spent a
15 lot of time traveling back and forth to Philadelphia
16 about three times for trials. And finally, they got
17 a conviction. He plea-bargained at his trial.
18 There really wasn't a trial.

19 I had to spend an enormous amount of
20 time just shutting down my credit, going back and
21 forth to Philadelphia, and getting involved. But
22 the postal inspector did a fine job, I thought,
23 considering where we were coming from. I had all my
24 credit stopped -- or I had all this activity before
25 the trial locked down in a matter of a couple weeks.

1 Then I went back out over that period
2 of time, like the state policeman just mentioned, to
3 notify the credit bureaus to take the information
4 off my report. In fact, I pulled it up two days ago
5 because I knew I was coming here. I looked through
6 it with a fine-tooth comb. It's fairly accurate.
7 They are very complicated. They are long and they
8 are almost encrypted the way they are written. So
9 you have to first find out how they are set up.

10 It's just like going into -- I'm a CPA
11 so every time we audit a business, every time we go
12 into a business, everybody's books are different so
13 you have to kind of figure out how the system works.
14 And these are the same, all the different credit
15 bureaus.

16 Where I feel that I'm a little
17 different, I've had this stopped. But the average
18 person in Pennsylvania that has a fraud committed
19 against them is kind of in a different situation
20 because they have to pay for it.

21 And right before I came over here, I
22 went out on the Internet and Equifax offers a
23 service for \$70 a year. So if you're going to get
24 notified, you are going to have to pay the three
25 major credit bureaus \$70 a year. And some of my

1 accountants on my staff that saw this as a problem,
2 they don't have the luxury of going and locking down
3 the credit or they didn't want to so they have
4 signed up for this service. But they don't think
5 it's fair because it's kind of costly. And I kind
6 of agree with them. But I went to the extreme of
7 actually locking it down.

8 I think it is serious. Like, for
9 instance, my parents, they are in their 80s. And
10 when you sign up for this service, you will get an
11 e-mail anytime anybody comes into your credit. But
12 my parents, they don't have access to computers.
13 Now, I could probably set something up for them
14 where they can e-mail me and then I could talk to
15 them and see what's going on. I think it's a real
16 problem.

17 Where I think -- and I know this
18 gentleman here was concerned about the cost of
19 getting the credit report; and being a
20 businessperson, I agree with him. I'm sympathetic.
21 These companies are in business to make money by
22 developing credit. However, I do think they can do
23 some simple things that will at least shrink that
24 down to a much smaller percentage, maybe within like
25 a few percentage points. Because you can't

1 eliminate this problem.

2 One of the things that I think they
3 can do is on a simple address change, when it comes
4 into your credit, I think they can set it up and
5 e-mail the individual. I mean, how much does that
6 cost? They can have a computer program set up and
7 it can be done electronically to somebody's e-mail.
8 They are changing my address; two, if any new
9 accounts are set up; and, three, any inquiries at
10 all into your credit they can do a simple e-mail to
11 an individual.

12 That's not going to divulge a person's
13 credit. That's not going to compromise their
14 business, in my opinion. I could be wrong, but I
15 don't think so. Just send a simple e-mail, somebody
16 is coming into your credit.

17 My friend at work has that done and
18 it's working out fine. Because then I know if I'm
19 applying for credit, if I'm going to remortgage, if
20 I'm going to go out and get another credit card,
21 immediately right then and there that's going to
22 come and tell me that. If not, why is somebody
23 going into my credit?

24 We sat around and thought about this
25 for a long time after this whole incident happened.

1 And we're accountants and I'm an auditor and this is
2 part of my professional life here. I try to protect
3 business assets when I'm doing an audit. How do you
4 do that? You set up internal controls. Well, I
5 feel this would be a good internal control for the
6 public.

7 Other than that, I would just like to
8 thank the committee, Mr. Chairman and
9 Representatives, for this honor to come before you
10 and give you my side of the story. I would be glad
11 to answer any questions.

12 CHAIRMAN HASAY: Well, thank you very
13 much, Mr. Bianco, for your testimony today. I'm
14 sorry to hear what happened. It's happening more
15 and more each year.

16 Representative Nailor.

17 REPRESENTATIVE NAILOR: Thank you,
18 Mr. Chairman.

19 Mr. Bianco and I are good personal
20 friends and have been for some time. I don't know
21 of anyone in my life that is more of a stickler for
22 detail than Ed Bianco. If it can happen to him,
23 believe me, it can happen to any one of us.

24 Ed, I still don't fully understand how
25 this happens, and it really concerns me. And we had

1 some discussion when this all happened. How did the
2 post office allow for someone not even there to
3 visit a post office to change your address and have
4 your mail sent to Philadelphia?

5 MR. BIANCO: That's a really good
6 question. I was in the post office one day after
7 this happened and I pulled this card. And what
8 happened was a person in Philadelphia filled out
9 this card and mailed it to the Mechanicsburg Post
10 Office and they changed my address. It's that
11 simple. I can go out and do it to you now.

12 Now, the post office has tried to put
13 into place some safeguards such as confirming the
14 change. But had a mistake not been made on the day
15 after I found this going on and they delivered mail
16 to my house -- now, not all the mail will be
17 stopped, just the mail they fill out, Ed Bianco. If
18 it's family, it will come. If it's with my wife, it
19 will come. If it's with my children in my name, it
20 will come. But a mistake was made. They were short
21 of help. They had a person that didn't recognize
22 the change in the mailbox they actually delivered it
23 to.

24 I saw the fake credit cards in the
25 mail. I got them. And that's when I had the credit

1 report. That's when I started putting two and two
2 together when I got the notification that they
3 changed my address. I'm lucky.

4 And then at that point when I told the
5 -- the postal people actually locked down my mail.
6 They wouldn't give me my mail. Had I not developed
7 a relationship with the postal inspector -- I got
8 ahold of him on a weekend -- he wouldn't have called
9 Mechanicsburg to unlock my mail. They wouldn't have
10 given me my mail for weeks.

11 But what really concerned me -- and
12 maybe I was naive -- was the financial information
13 because my assets are really important to me. So I
14 wanted to make sure they were secure. And my bank
15 statements were ready to come out that week. If
16 they would have had my financial information, they
17 probably could have wiped out my accounts with a
18 little bit more ingenuity.

19 And there is no way you are going to
20 protect your social security number. You can sit
21 here and say, you can do this. You can change it.
22 It's really not safe. It's out there too much.
23 There's too many things going on now electronically.
24 It's just impossible. So the best thing, in my
25 opinion, at least from this instance, is to get a

1 notification. That's why I'm in favor of that.

2 I can't believe that the U.S. Post
3 Office can't -- before they change an address, a
4 person should have to walk in with this form -- I
5 have no problems with it -- with at least an ID, a
6 photo ID, a driver's license. To me, it's just
7 unbelievable. I'm just trying to deal with the
8 system the best I can. And I know from the
9 Commonwealth of Pennsylvania and Representatives, I
10 know this isn't your problem in that sense, but
11 whatever we can do to bridge that gap I think would
12 help. And I know you are going to try and we are
13 going to do the best we can.

14 REPRESENTATIVE NAILOR: Thank you.

15 CHAIRMAN HASAY: Representative James.

16 REPRESENTATIVE JAMES: Thank you,
17 Mr. Chairman.

18 It's just interesting -- and as Jerry
19 said -- that if it happened to you, it can happen to
20 any of us. But what I was interested in is you said
21 something about if somebody checks on your credit,
22 they would get an e-mail --

23 MR. BIANCO: Yes.

24 REPRESENTATIVE JAMES: I was asking
25 the chairman here because I didn't hear all of it.

1 That person would have to pay a certain amount of
2 money to each credit service or can they just pay
3 one money and all of them would do it?

4 MR. BIANCO: I believe it would be
5 each. And it's about -- Equifax was \$69.95.

6 REPRESENTATIVE JAMES: Okay.

7 MR. BIANCO: At least it was when I
8 just went to the computer today and pulled it up.
9 So it would be the three main ones. It would be
10 approximately that per year.

11 REPRESENTATIVE JAMES: So what would
12 one ask for if they wanted to do that? Would they
13 just call the credit service?

14 MR. BIANCO: I believe that there are
15 different levels of service. You can have all kinds
16 of notifications. Here, I would be glad to give
17 this to the committee. My friend just gets an
18 e-mail notice that somebody is coming in to his
19 account and, I guess, who it is.

20 REPRESENTATIVE JAMES: Now, on the
21 post office, have they made a change that you have
22 to have ID in order to change your address now?

23 MR. BIANCO: Probably not. I'm not
24 aware of that.

25 REPRESENTATIVE JAMES: Okay. Because

1 it seems like everybody now is saying you have to
2 show ID. And I guess we all have to make a call to
3 our Congressmen to say they ought to put that change
4 in right away.

5 MR. BIANCO: I probably should do
6 that, too. I would appreciate that. It would
7 probably get further faster.

8 REPRESENTATIVE JAMES: No, it probably
9 would get faster if you do it.

10 MR. BIANCO: At some point you lose
11 energy.

12 REPRESENTATIVE JAMES: I'm just glad
13 that you brought it up because it raises
14 consciousness. Therefore, I'm definitely going to
15 make the call today to the Congressmen to do
16 whatever they have to do in order to make that
17 change..

18 Thank you very much for your
19 testimony.

20 MR. BIANCO: You're welcome.

21 REPRESENTATIVE JAMES: Thank you,
22 Mr. Chairman.

23 CHAIRMAN HASAY: Any other questions?
24 Chairman Caltagirone.

25 REPRESENTATIVE CALTAGIRONE: It

1 boggles your mind. Any of us sitting here, any one
2 of us sitting here could become a victim that easy,
3 just as was said. We think there's a lot of
4 safeguards. We keep plugging holes. We'll probably
5 plug a couple holes this session. And they are out
6 there thinking of some other ways. I mean, the
7 computer is one of the worst nightmares because
8 somehow somebody, they hack in and they get the
9 information. Anybody is vulnerable. I think with
10 what you just pointed out with the post office, that
11 could happen to anybody. I think you made a good
12 point.

13 MR. BIANCO: The postal inspector is
14 even at odds with his own people because he
15 understands the seriousness of it. And even their
16 confirmation system is flawed because if they change
17 your address and confirmation comes in, it's going
18 to get forwarded to the new address.

19 And that's why I think they should
20 have to have an ID to come in or some other means.
21 I think that would be the best.

22 REPRESENTATIVE CALTAGIRONE: Thank
23 you.

24 CHAIRMAN HASAY: Thank you,
25 Mr. Bianco, for your testimony.

1 MR. BIANCO: Thank you very much.

2 CHAIRMAN HASAY: This hearing is now
3 adjourned. Thank you.

4 (The proceedings concluded at 12:35
5 p.m.)
