COMMONWEALTH OF PENNSYLVANIA
HOUSE OF REPRESENTATIVES
HOUSE TRANSPORTATION COMMITTEE

ROOM 60
EAST WING
HARRISBURG, PENNSYLVANIA

THURSDAY, FEBRUARY 5, 2009
9:00 A.M.

FEDERAL ECONOMIC STIMULUS PROPOSAL

BEFORE:

- HONORABLE JOSEPH F. MARKOSEK, CHAIRMAN
- HONORABLE MIKE CARROLL
- HONORABLE PAUL COSTA
- HONORABLE MARK GERBER
- HONORABLE GARY HALUSKA
- HONORABLE RON MILLER
- HONORABLE TONY PAYTON
- HONORABLE TINA PICKETT
- HONORABLE JOHN SIPTROTH
- HONORABLE THOMAS J. SOLOBAY
- HONORABLE CHELSA WAGNER

P R O C E E D I N G S

- - -

CHAIRMAN MARKOSEK: Okay. Good morning. Good morning, everybody. We've got some folks, I'm sure, that will be kind of dropping in and out. There's other -- other committee meetings today.

I'd like to get started by recognizing a former colleague, Representative Bob Flick. He and I were in the same class, 1982. He's a little smarter than I am. He figured how to get on with something else in his life.

MR. FLICK: Moving on.

CHAIRMAN MARKOSEK: I'd like to recognize his presence. I'd like him to lead us all in the pledge of allegiance.

(Pledge of allegiance.)

MR. FLICK: Thank you, Mr. Chairman

CHAIRMAN MARKOSEK: Thank you, Bob.

I'm told that Chairman Geist will not be here this morning; and we do, of course, have some members here. The secretary, rather than calling the roll, will indicate -- will take formal roll and mark down everybody that

1 is here today and as they come in as we move
2 forward.

3 So with that, there's no votes today
4 anyway. It's an informational hearing and
5 we're happy that everybody could attend.

6 First person, I see he's ready to go,
7 bright eyed and bushy tailed on a cold
8 morning, is our friend, Jim Ritzman, who is
9 the Deputy Secretary for Planning for
10 PennDOT.

11 Jim, welcome and you may proceed.

12 DEPUTY SECRETARY RITZMAN: Okay.
13 Thank you. Is that okay?

14 Good morning. Thank you so much for
15 the opportunity just to speak about
16 Pennsylvania's economic recovery
17 preparations. This has been an area of focus,
18 oh boy, at least very rigorously for the last
19 three or four months, and as far back as last
20 January when we were first responding to a
21 couple of the AASHTO surveys that really led
22 us to believe, to really start seriously
23 thinking about how to best be prepared for
24 whatever economic stimulus package could
25 eventually come through Congress.

1 A number of things that I'd want to
2 point out, first of all, with regards to just
3 transportation planning and transportation
4 finance. First of all, we work extensively
5 with our MPO and RPO partners across the
6 state. That is the way projects get approved
7 and included on a transportation improvement
8 program.

9 That relationship is key to us being
10 successful. So we, again, try to communicate
11 with that work group of where -- what our
12 thoughts are and our intents are, and then
13 it's the public forum in which all our
14 business is taken care of and through.

15 The one thing I'd want to point out
16 as well is when you hear economic stimulus in
17 the hundreds of billions of dollars, you just
18 think that so much is going to be taken care
19 of. Especially, you watch TV and you see some
20 of the -- the conversation about \$900
21 billion.

22 Ultimately, what the numbers are with
23 regards to highways and bridges, which is the
24 focus of -- of my testimony today, is just
25 talking about a range of 27, \$30 billion,

1 again, a huge number, but a small portion
2 of -- of what the American Recovery and
3 Reinvestment Act is really about.

4 The other point that I'd want to make
5 is when you look back and see the discussions
6 or the uncertainties on the federal side, as
7 well as the state revenue side, there are some
8 huge implications for long range planning.

9 Essentially what -- I guess what I'd
10 like to talk about a little bit is just the
11 Transportation Funding and Reform Commission.
12 The bottom line number that was recommended at
13 that point was \$1.7 billion of additional
14 funds.

15 And I always like to characterize
16 that as a huge, huge number; but when you
17 really think about what it can accomplish,
18 it's very minimized.

19 And I'll just characterize it this
20 way, the way I typically do. What that \$1.7
21 billion allowed us to do was get our
22 structurally deficient bridges to a national
23 average in 17 years.

24 And I always comment that I have a
25 daughter in 10th grade and I can imagine her

1 coming home from school saying, dad, I didn't
2 do so good in this test, but don't worry. I
3 have a corrective action plan that in 17 years
4 I'll be average.

5 And when you realize how crazy that
6 is, and how not -- unacceptable that is, you
7 really get the feel of how much resources is
8 really necessary in order to move so many
9 roads and so many bridges and keep them in an
10 acceptable fashion.

11 Again, the main point of that is the
12 Stimulus and Recovery Act. Even though it's a
13 huge number, when you ultimately see what its
14 impact is, while it's extremely helpful, it is
15 not a long-term solution. It is a -- a shot
16 in the arm. It's a one-year booster.

17 In essence, what we have anticipated
18 for this current calendar year of 2009 is
19 about a \$1.8 billion construction program, and
20 depending on what ultimately happens by way of
21 economic stimulus it could be increased from a
22 range of about 850 million to a 1.2 billion
23 with the -- with what the current numbers
24 are.

25 And now I'll just roll in and just

1 talk about uncertainty. And, again, when we
2 talk about the recovery bill, that's what I
3 would say at this point.

4 We don't know what's going to
5 happen. Anywhere from the size, how much
6 money there will be for highways and bridges,
7 how much of it ultimately will come to
8 Pennsylvania, what are the extra rules that
9 are going to be applied for Pennsylvania?

10 And I know further testimony this
11 morning is going to get into some of those
12 particulars. So I'm going to try to avoid
13 doing this at this point.

14 But when you look at the House side,
15 I'll just throw these out as -- as examples
16 and -- and thought process in how we approach
17 this situation or this opportunity.

18 On the House side, 55 percent of it
19 goes through one distribution, which is a very
20 flexible distribution. The balance, or 45
21 percent of it, would go through a STP, a
22 specific allocation or distribution, and that
23 gets parsed out in four different areas. And
24 one of those is the traditional transportation
25 enhancement program.

1 So right away you're -- you're
2 splitting how much money comes, it comes into
3 different rules and different requirements on
4 how it could be eligible and -- so 10 percent
5 of 45 percent would be transportation
6 enhancement related.

7 So, again, the whole purpose there is
8 just to say there are a ton of rules and
9 depending on what ultimately gets agreed upon
10 by both the House and the Senate could have a
11 dramatic impact on what types of -- or which
12 specific projects would advance.

13 The other key point that I'd want to
14 point out about the House of Representatives'
15 bill is that there is a use-it-or-lose-it
16 provision that requires 50 percent of the
17 funds to be obligated within 90 days.

18 And I'll -- I'll come back to that
19 point as well a little bit later as I talk
20 about just the specific impact.

21 On the Senate side, again, it has a
22 similar use-it-or-lose-it provision, but that
23 50 percent would be required to be obligated
24 within 180 days.

25 So that's a little bit longer time.

1 But it has different rules or different
2 requirements. The first 50 percent of the
3 money pretty much goes to the state to
4 decide. The second 50 percent, 80 percent of
5 that would go to locals and an overall 10
6 percent would go for congestion mitigation,
7 air quality type projects.

8 So, again, there's a separate set of
9 rules in each of the bills, and ultimately, as
10 that goes to conference committee and gets
11 resolved, we'll be very anxious to see what
12 ultimately comes out because that's ultimately
13 going to be dependent on the types of projects
14 that can be advanced.

15 Again, we're still hearing that
16 congressional leaders are hopeful that that
17 can get resolved and into the White House by
18 President's Day. So a very aggressive
19 schedule.

20 The main focus of what I wanted to
21 talk about this morning is just Pennsylvania's
22 approach to the economic recovery plan.

23 What we did, as I indicated
24 previously, is we responded to a couple AASHTO
25 surveys. Each time that we did that we

1 answered specific questions that were posed to
2 us. But what we really wanted to do is say,
3 okay, if -- whatever range of resources would
4 come to Pennsylvania, we would want to be in a
5 position to take advantage of that.

6 Key things that we did know were that
7 whatever it would be it would be relatively
8 quick so we needed to be able to respond
9 quickly.

10 The first look that we did was to
11 look at our existing transportation
12 improvement program, our existing TIP, we
13 wanted to make sure that those projects that
14 had already gone through the rigorous
15 prioritization process and could be advanced
16 from the second and the third and the fourth
17 years were the first ones that we were looking
18 at, because they were already regional
19 priorities.

20 What we also did was say -- we picked
21 a couple different scenarios at 500 million, a
22 billion and a billion-and-a-half just to make
23 sure we were covering the range of potential
24 that could come to Pennsylvania and we -- we
25 used the existing distribution of funds.

1 So we said if a particular MPO or an
2 RPO gets a certain percentage of the pie with
3 the last TIP update that would be their
4 appropriate share in this stimulus package.
5 Again, for planning purposes.

6 So what we did was came up with,
7 again, those projects that could be advanced
8 from the TIP, already regionally prioritized,
9 and if that fell short of the dollar value
10 target -- target that we had looked at again
11 regionally, we looked at other projects
12 knowing, once again, that the intent of the
13 economic recovery is to get people to work
14 quickly.

15 So what we did was identify those
16 projects that could be advanced very quickly,
17 which means there are not right-of-way
18 acquisition requirements, utility conflicts,
19 permitting issues. They would have to be
20 things that could be turned around extremely
21 quickly.

22 Also during these conversations what
23 we did was had several meetings with APC,
24 ACEC, constant contact with Federal Highway
25 Administration, Pennsylvania Division, again,

1 just trying to share information on best
2 insight of the people of thought and to make
3 sure our approach made sense.

4 Again, just to give some sense of
5 scale of what that \$1.5 billion could be, by
6 the way, you know, again, our House number is
7 about 890 -- or Senate number is about 890
8 million potentially coming to Pennsylvania.
9 The House side is about 1.25 billion.

10 So our -- that 1.5 number of just
11 PennDOT-generated projects is greater than
12 the -- the scale that we're currently talking
13 about presently.

14 But just to get a sense of what that
15 scale would be, the candidate list that we did
16 identify would be able to repair 428 bridges,
17 125 of which are structurally deficient. The
18 other ones would be some level of preservation
19 that would be --that we would extend their
20 life and then also repaving about 870 miles of
21 roadway across the state.

22 Again, when you look at the scale of
23 need, right now we're just under 6,000
24 structurally deficient bridges in
25 Pennsylvania. Being able to address 125 of

1 them is very, very helpful, but it certain
2 doesn't resolve the problem.

3 The one other point that I'd want to
4 bring up at this point, too, was, as we put
5 that list together, we sat down with the House
6 and Senate transportation staff to go over our
7 approach and our -- our selection process --
8 and, again, what -- selection process is a bad
9 term because it's really just a candidate list
10 to say Pennsylvania's prepared for whatever
11 may come and fall on our lap. We'll not only
12 take advantage of those resources but also be
13 in a position to take what other states may or
14 may not be able to grasp.

15 Again, leaving you with a couple of
16 key points. We are continuing to monitor the
17 legislation. We want to be in a position to
18 understand and communicate that with our --
19 our regional partners, the MPO's and RPO's.
20 That's how we see this process working.

21 We know that there is interest for
22 local projects in addition to the ones that
23 we've raised. Those are certainly on the
24 table. Those are certainly to be discussed at
25 the MPO and the RPO level.

1 The key provisions that we'll need to
2 meet are, one, to make sure they're federally
3 aid eligible and, two, that they're projects
4 that can be delivered very quickly. Because
5 that, again, is our understanding of what the
6 intent of the legislation is.

7 So there will be that vetting and
8 prioritization process. What we wanted to do,
9 again, was make sure the people were aware
10 that we've been working hard to be prepared
11 for whatever potentially could come
12 Pennsylvania's way.

13 And, yeah, two last thoughts are, we
14 got to see the rules, under those rules, and
15 then we're committed to engage primarily
16 through our MPO and RPO process to make good
17 choices for using those funds.

18 And, again, thank you for the
19 opportunity to talk about PennDOT's approach
20 and Pennsylvania's preparedness.

21 CHAIRMAN MARKOSEK: Okay. Thank you,
22 Jim. And right off the bat you made a point
23 that I've been stressing as well to our -- our
24 members as well as anybody else that's willing
25 to listen, that the stimulus is really -- I

1 don't want to use the word mandate, but it
2 doesn't solve our long-term transportation
3 problems.

4 Whatever we get or don't get from the
5 stimulus, we still have a lot of tough
6 decisions to make for long-term transportation
7 funding in Pennsylvania.

8 But I -- I had a couple of specific
9 questions. Just very briefly, when you
10 mention about your outreach, have you
11 talked -- has there been any discussion with
12 other agencies within the Commonwealth --
13 interagencies, you know, are we going to, you
14 know, pick a road to -- to rebuild, for
15 example, and then find out that, you know, DEP
16 is going -- or somebody is going to tear it up
17 a year from now to put a water line in? You
18 know, have we made those kinds of things --
19 are we looking at those kinds of things?

20 And the other thing, too, when you
21 mentioned the outreach to the various groups,
22 some of which are here, I think also part of
23 your outreach should be with the legislator as
24 well.

25 And I think that's -- that's

1 something that, you know, you need to be
2 cognizant of. I know through SPC technically,
3 you know, the legislature is represented, but
4 I think there needs to be a lot more
5 discussions, you know, with the legislature as
6 well.

7 DEPUTY SECRETARY RITZMAN: Can I --

8 CHAIRMAN MARKOSEK: Sure.

9 DEPUTY SECRETARY RITZMAN: --
10 comment? The first one, with the interagency,
11 the hard part about this is each of the
12 agencies are doing the same thing that we are,
13 trying to figure out what the rules are going
14 to be, how much money there is. Ken Klothen
15 from DCED is the primary contact back and
16 forth for the coordination.

17 So we -- we will be doing more of
18 that, but I would say it's more, once we know
19 what we're -- what we think we can do rather
20 than at this point where we're just -- I was
21 going to say blowing in the wind, but that's
22 the wrong answer. As we're -- as we're being
23 -- trying to be prepared for whatever may come
24 our way.

25 But right now it is very divergent.

1 It's very, very broad-based. So that's
2 definitely something that we need to do. And
3 then also with the outreach, you know, I
4 definitely agree with that.

5 One of the things I will say though
6 is a lot of legislators are involved at the
7 MPO and RPO level, so even though we may not
8 have had direct ties that way, they are still
9 being involved in those kind of conversations
10 about specific projects and local projects.

11 Good news.

12 CHAIRMAN MARKOSEK: Okay.

13 Representative John Siptroth.

14 REPRESENTATIVE SIPTROTH: Thank you.
15 Thank you, Mr. Chairman. And I apologize for
16 being late.

17 Secretary, will the federal stimulus
18 money require a match from the state?

19 DEPUTY SECRETARY RITZMAN: Right --
20 right now we believe not. They're set up to
21 be a hundred percent federal. But ultimately
22 we'll still wait and see. Right now that's
23 the plan --

24 REPRESENTATIVE SIPTROTH: Okay.

25 DEPUTY SECRETARY RITZMAN: -- and the

1 approach that we've been taking.

2 REPRESENTATIVE SIPTROTH: Any
3 preliminary guidelines they're putting out
4 there?

5 DEPUTY SECRETARY RITZMAN: Yes.
6 Yes. Correct.

7 REPRESENTATIVE SIPTROTH: Thank you.
8 Thank you, Mr. Chairman.

9 CHAIRMAN MARKOSEK: Representative
10 Payton.

11 REPRESENTATIVE PAYTON: Thank you,
12 Mr. Chairman. Thank you, Mr. Chairman.

13 Thank you for your testimony. I have
14 a question about the use-it-or-lose-it
15 provisions --

16 DEPUTY SECRETARY RITZMAN: Okay.

17 REPRESENTATIVE PAYTON: And the 50
18 percent that has to be obligated in 90 days.
19 What does the obligated mean?

20 DEPUTY SECRETARY RITZMAN: Yeah.
21 Good question. Typically what we do, that
22 would be -- we would have to request from
23 Federal Highways to use money for a particular
24 project. And what's required for a
25 construction stage -- stage would be the plans

1 and specifications and estimate.

2 So that would mean it would have to
3 be ready to advertise to contractors to bid
4 on. So it would be at that stage where, in
5 order to obligate, we need to have a -- have a
6 package that's ready to be bid and
7 advertised.

8 REPRESENTATIVE PAYTON: Got you. And
9 other monies in the previous years that we
10 received from the feds, have they always
11 contained a use-it-or-lose-it provision or is
12 this something new?

13 DEPUTY SECRETARY RITZMAN: They do in
14 that you have a given federal fiscal year that
15 runs from October 1st through September 30th,
16 that if you don't use it by the end of
17 September you'll lose it. But this would be
18 something that would say right out of the
19 chute whether it's --

20 REPRESENTATIVE PAYTON: This is a
21 relatively short time frame then.

22 DEPUTY SECRETARY RITZMAN: Correct.
23 Correct. Yeah. Ninety days.

24 The hard part, from a planning
25 perspective, we'd love to say here's our

1 portfolio of projects, here's how the -- the
2 money is going to come, and here's how we can
3 best match that. We like to look at it in a
4 multi-year because we know projects do take
5 time to deliver. So when you get one -- I'll
6 say a hiccup for additional revenue, it does
7 take quite a bit of coordination to make sure
8 you get to use those funds.

9 REPRESENTATIVE PAYTON: Excellent.
10 Thank you very much, Mr. Chairman.

11 CHAIRMAN MARKOSEK: Representative
12 Pickett, Tina Pickett.

13 REPRESENTATIVE PICKETT: Thank you,
14 Mr. Chairman.

15 Is there a specific list, intended
16 list of projects? I understand one was
17 presented and pulled back.

18 DEPUTY SECRETARY RITZMAN: Yeah.

19 REPRESENTATIVE PICKETT: Is there one
20 at this point?

21 DEPUTY SECRETARY RITZMAN: Yeah.
22 What I would say is we have a candidate list
23 that we've worked really hard to round out,
24 balance it across the state, and it was at
25 a -- a value of \$1.5 billion.

1 So, yes, there is a specific list of
2 projects that we've said we can deliver within
3 six months.

4 But the concern would be it is a
5 candidate list and we know there are other
6 projects. So it's not an exclusive list.

7 CHAIRMAN MARKOSEK: Okay?

8 Representative Chelsa Wagner.

9 REPRESENTATIVE WAGNER: Thank you,
10 Mr. Chairman.

11 I have a question that is somewhat of
12 a follow-up to Chairman Markosek's point on, I
13 guess, involving the legislature or involving
14 the committee and just I ask it generally.
15 What do you see the role of either the House
16 Transportation Committee or the Senate
17 Transportation Committee in this process, if
18 any?

19 DEPUTY SECRETARY RITZMAN: Good
20 question. We very much value your input. If
21 there are particular projects that you know
22 of, again, that our primary concern is -- is
23 the quick delivery and that are federally
24 eligible, please let us know. We -- we
25 certainly think that's extremely valuable.

1 Again, our concern was we wanted to
2 make sure that everyone knew that Pennsylvania
3 was ready for whatever happens. We, through
4 federal requirements, as well as good
5 practice, work very closely with our MPO's and
6 RPO's to make those transportation planning
7 and program decisions. We continue to value
8 that.

9 A lot of legislators are -- are
10 really tied that way into those committees
11 locally about projects and, again, that's a
12 great way for -- for projects to surface for
13 consideration, for discussion, for vetting,
14 for prioritization. If --

15 REPRESENTATIVE WAGNER: And then just
16 as a comment, part of the reason that I asked
17 the question is I'm from Allegheny County and
18 involved with some groups in Pittsburgh that
19 are, I guess, city kind of based --

20 DEPUTY SECRETARY RITZMAN: Yeah.

21 REPRESENTATIVE WAGNER: -- and have
22 been talking about the stimulus package and,
23 among other thing, are certainly concerned
24 about the transportation aspects but have had
25 a lot of trouble in finding information and a

1 lot of different planners, even including city
2 planning involved in this group, and it's not
3 in an official capacity, but have been
4 concerned that whatever list that was
5 forwarded by our MPO, SPC, was not necessarily
6 reflective of, I guess, some of the larger
7 concerns --

8 DEPUTY SECRETARY RITZMAN: Sure.

9 REPRESENTATIVE WAGNER: -- or did not
10 necessarily have so much foresight --

11 DEPUTY SECRETARY RITZMAN: Right.

12 REPRESENTATIVE WAGNER: -- so as in
13 years past we're looking at projects that may
14 not have the same kind of long-term economic
15 impact that might be sought.

16 DEPUTY SECRETARY RITZMAN: Right.

17 And -- and I will agree, a -- a quick
18 turnaround requires you to make different
19 choices.

20 My other little, I guess,
21 illustration is I always say if somebody gave
22 me a thousand dollars and said I had 15
23 minutes to spend it or 24 hours to spend it,
24 I'd make different choices.

25 So those kinds of things really do

1 impact the kinds of decisions you can make.
2 Because we need to make sure that -- because
3 it's economic stimulus -- that we get projects
4 out very quickly.

5 So that leads to different choices
6 than if you're just looking for an ultimate
7 economic impact which may take years to get --
8 to get developed.

9 We are -- I know SPC also sent a note
10 out to all the counties ask -- soliciting
11 projects for consideration.

12 So there's a number of efforts going
13 on to do that kind of thing. But, you know,
14 if -- if there are particular projects you'd
15 like us to look at, I'd be happy to do that.

16 REPRESENTATIVE WAGNER: Thank you.

17 CHAIRMAN MARKOSEK: Representative
18 Ron Miller.

19 REPRESENTATIVE MILLER: Thank you,
20 Mr. Chairman.

21 Mr. Ritzman, your statement, economic
22 stimulus, release projects quickly, and then
23 we know the -- on the federal side of it that
24 the House said 90 days, the Senate said 180.

25 DEPUTY SECRETARY RITZMAN: Right.

1 REPRESENTATIVE MILLER: What's your
2 interpretation of this? Is that a passage
3 that is signed into law or is that a
4 promulgation of regulations?

5 DEPUTY SECRETARY RITZMAN: No. That
6 would be a -- from the time the money hits the
7 books. So they're expecting that within a
8 week's time, after passage, that there will be
9 money that we could tap into.

10 So that would be the start of the
11 clock for the 90 days. So I would say 90
12 days, plus a week, or 180 days, plus a week,
13 is what I would anticipate.

14 REPRESENTATIVE MILLER: So you're
15 telling us that they are going to commit this
16 money without promulgation of regulation?

17 DEPUTY SECRETARY RITZMAN: Yeah.
18 What they're trying --

19 REPRESENTATIVE MILLER: Just
20 legislative intent?

21 DEPUTY SECRETARY RITZMAN: Yes. What
22 we're trying to do is utilize the existing
23 distribution channels that are already in
24 place --

25 REPRESENTATIVE MILLER: Okay.

1 DEPUTY SECRETARY RITZMAN: -- for
2 other transportation funding so that they can
3 put a chunk of money from the general fund
4 through that same distribution and get it out
5 quickly to be tapped into.

6 REPRESENTATIVE MILLER: Boy, we
7 should do the same thing here.

8 Thank you, Mr. Chairman.

9 CHAIRMAN MARKOSEK: Okay. Thank
10 you.

11 Representative Siptroth, a
12 follow-up.

13 REPRESENTATIVE SIPTROTH: Thank you.
14 Just a couple of follow-up questions, Mr. --
15 Secretary Ritzman.

16 Regarding the 428 bridges and 870
17 miles of road, just want to ensure, again, in
18 my mind, that those projects are meeting the
19 criteria established by the federal government
20 for the 90- or --

21 DEPUTY SECRETARY RITZMAN:
22 Absolutely.

23 REPRESENTATIVE SIPTROTH: -- 180-day
24 scenario?

25 DEPUTY SECRETARY RITZMAN: What

1 our -- when our target was done -- and
2 actually this -- our work was done prior to us
3 seeing any of the House or Senate bills.

4 What we did was said -- we set our
5 own target of saying we know it's going to
6 have to be something quick. We're going to
7 say 180 days to let and that's what that 1.5
8 billion list was driven from, that premise of
9 what can we have ready 180 days to let.

10 REPRESENTATIVE SIPTROTH: One other
11 question. Is there anything set aside to
12 offer aviation?

13 DEPUTY SECRETARY RITZMAN: Yes.

14 REPRESENTATIVE SIPTROTH: Is that
15 part of the mass transit, too?

16 DEPUTY SECRETARY RITZMAN: Yeah.
17 There -- the other kind of numbers here -- on
18 the House side, there's 3 billion for airports
19 and I believe on the Senate side it's 1.3
20 billion.

21 REPRESENTATIVE SIPTROTH: That's
22 expected in the state of Pennsylvania?

23 DEPUTY SECRETARY RITZMAN: No. That
24 would be total.

25 REPRESENTATIVE SIPTROTH: That's the

1 package.

2 DEPUTY SECRETARY RITZMAN: I'm not
3 familiar with the distribution of how that
4 would work and I don't think we had a good
5 sense either.

6 REPRESENTATIVE SIPTROTH: Okay.
7 Thank you very much.

8 Thank you, Mr. Chairman.

9 CHAIRMAN MARKOSEK: Representative
10 Miller, you have a follow-up?

11 REPRESENTATIVE MILLER: Thank you,
12 Mr. Chairman.

13 CHAIRMAN MARKOSEK: A quick
14 follow-up.

15 REPRESENTATIVE MILLER: A quick
16 follow-up to that question if I may. If you
17 use 180 days and the House language prevails
18 with 90 days, what would be the dollar value
19 of projects that you -- we would have ready to
20 go?

21 DEPUTY SECRETARY RITZMAN: I don't
22 think I could answer that today.

23 REPRESENTATIVE MILLER: Okay.

24 DEPUTY SECRETARY RITZMAN: We do --
25 I'll get back to you on that because we -- we

1 have done the analysis. I just didn't bring
2 that kind of information here.

3 REPRESENTATIVE MILLER: Okay. I was
4 just wondering if maybe 85 percent of them --

5 DEPUTY SECRETARY RITZMAN: Yeah.
6 It --

7 REPRESENTATIVE MILLER: -- would fall
8 off the radar scene because 90 days is --

9 DEPUTY SECRETARY RITZMAN: It --

10 REPRESENTATIVE MILLER: -- such a
11 short period.

12 DEPUTY SECRETARY RITZMAN: It -- it
13 is very difficult and that is a big difference
14 between 90 days and 180 days. Just because
15 you need to know that you have money and it
16 makes sense to get started on some projects.

17 That's one of the advantages to again
18 utilize those projects that are on the TIP.

19 The issue with the use-it-or-lose-it
20 provision is that 50 percent needs to be. So
21 that it's not that the entire list would have
22 to be but just the first 50 percent would be.

23 REPRESENTATIVE MILLER: Okay. Thank
24 you.

25 Thank you, Mr. Chairman

1 CHAIRMAN MARKOSEK: Okay. If you
2 could respond, Secretary, to the committee,
3 we'll distribute that information.

4 DEPUTY SECRETARY RITZMAN: Okay.

5 CHAIRMAN MARKOSEK: Chelsa Wagner had
6 a follow-up.

7 REPRESENTATIVE WAGNER: Sure. Just a
8 follow-up on the -- either the 90 or 180 days,
9 do you anticipate or have any reason to
10 believe that there could be phasing within
11 that? So say you have a project -- how are
12 you defining project?

13 DEPUTY SECRETARY RITZMAN: Right.

14 REPRESENTATIVE WAGNER: So it may not
15 be a project that would be fully ready but
16 phase one of it could be.

17 DEPUTY SECRETARY RITZMAN: I don't
18 think so. I think the real issue there would
19 be you have a package that a contractor can --
20 can bid on. So if that construction package
21 could be broken out and bid separately, that
22 certainly would be an option to -- to phase it
23 out.

24 But I would think that would be a
25 whole project and then the 90 days or 180 days

1 just depends on what ultimately happens in a
2 conference committee for the time frame.

3 CHAIRMAN MARKOSEK: Okay? All
4 right. Executive Director Eric Bugaile.

5 EXECUTIVE DIRECTOR BUGAILE: I had
6 two questions actually. One was on the
7 candidates for transit, how were they arrived
8 at? And rail -- and was rail freight involved
9 with the rail passenger? How did they break
10 out?

11 And the second question was about
12 the -- early in this administration we
13 downsized a number of projects. Route 202 is
14 a good example of how it became a parkway, a
15 two-lane parkway from a four-lane limited
16 access.

17 Have we considered looking at --
18 revisiting those now that there would be this
19 shot in the arm from Washington? Why -- why
20 haven't we looked at that to perhaps put these
21 projects back to where they should be as -- as
22 larger projects then?

23 DEPUTY SECRETARY RITZMAN: Okay.
24 I'll answer the -- the second question first,
25 I think.

1 First of all, that really wasn't a
2 consideration because of the quick time frame
3 for delivery. Most of those big projects have
4 a multi-year delivery, project development
5 process, requiring permits, oftentimes the
6 utilities, especially right-of-way
7 acquisition. Again, the nature of those types
8 of work just draw out the project development
9 process.

10 So for a quick stimulus, that's not
11 feasible to think that you could get a project
12 like that delivered quickly.

13 EXECUTIVE DIRECTOR BUGAILE: Couldn't
14 we put that money though, put -- bring ahead
15 stuff that's already on the TIP and use that
16 extra money then that's on the TIP --

17 DEPUTY SECRETARY RITZMAN: Right.

18 EXECUTIVE DIRECTOR BUGAILE: -- then
19 for those projects?

20 DEPUTY SECRETARY RITZMAN: Right.
21 And that's -- that's certainly what's in the
22 mix now. About -- just under half of those --
23 that \$1.5 billion number were projects that
24 were in year 2010, '11 and '12 that can be
25 advanced.

1 So what that -- what we have not done
2 yet is figure out what the backfill is to
3 that. So that could be a consideration for
4 how an MPO and RPO round out an updated TIP.

5 But the -- the first focus was
6 getting -- which projects could be advanced
7 quickly.

8 And then on to the candidates for
9 transit, we did have a transit list and what
10 that was was essentially a culmination of
11 lists that transit -- transit agencies had
12 provided to us that could be quick hits.

13 Again, it would be a candidate list
14 of -- of things that could be delivered
15 quickly.

16 EXECUTIVE DIRECTOR BUGAILE: And
17 rail?

18 DEPUTY SECRETARY RITZMAN: I don't
19 believe there was a rail component in the
20 House side and that's when --

21 EXECUTIVE DIRECTOR BUGAILE: There's
22 passenger rail though and then freight rail
23 which is --

24 DEPUTY SECRETARY RITZMAN: Correct.
25 The freight rail will --

1 EXECUTIVE DIRECTOR BUGAILE: One
2 doesn't -- you couldn't have one and then the
3 other?

4 DEPUTY SECRETARY RITZMAN: Correct.
5 The freight rail was not included in the
6 House, and I think there was a -- there was
7 1.1 billion for Amtrak and intercity passenger
8 rail.

9 EXECUTIVE DIRECTOR BUGAILE: Are we
10 ready -- there is a freight rail component,
11 though, with the list?

12 DEPUTY SECRETARY RITZMAN: I'll --
13 I'll have to get back to you on that. I know
14 Eric has certainly been working on things but
15 I don't have a list of that.

16 I would say we're always optimistic
17 and hopeful and like to be in a position that
18 we can have our share and be ready to take
19 care of -- other states that aren't quite as
20 prepared.

21 CHAIRMAN MARKOSEK: Okay. For the
22 record, Secretary Ritzman is referring to
23 Eric --

24 DEPUTY SECRETARY RITZMAN: Oh, sorry.

25 CHAIRMAN MARKOSEK: Madden who is

1 Deputy Secretary for --

2 DEPUTY SECRETARY RITZMAN: Thank
3 you.

4 CHAIRMAN MARKOSEK: For rail -- rail
5 and airports over at PennDOT.

6 Okay. Secretary, thank you --

7 DEPUTY SECRETARY RITZMAN: Thank you
8 again.

9 CHAIRMAN MARKOSEK: -- very much. We
10 appreciate that and I'm sure you'll be hearing
11 a lot more from us and vice-versa.

12 DEPUTY SECRETARY RITZMAN: Sounds
13 great.

14 CHAIRMAN MARKOSEK: So we look
15 forward to working with you. Thank you.

16 DEPUTY SECRETARY RITZMAN: Thank
17 you.

18 CHAIRMAN MARKOSEK: Okay. William
19 Buechner.

20 DR. BUECHNER: Yes, sir.

21 CHAIRMAN MARKOSEK: Thank you.
22 Welcome, chief economist and vice president of
23 economics -- economics and research for the
24 American Road and Transportation Builders
25 Association, ARTBA.

1 DR. BUECHNER: ARTBA.

2 CHAIRMAN MARKOSEK: Better known as
3 ARTBA.

4 DR. BUECHNER: Yes, sir.

5 CHAIRMAN MARKOSEK: Dr. Buechner,
6 thank you for traveling here to Pennsylvania
7 and the Capitol and you may proceed, sir, when
8 you're ready.

9 DR. BUECHNER: Okay. Well, thank you
10 very much.

11 Chairman Markosek and members of the
12 committee, I want to thank you all very much
13 for inviting ARTBA to be here this morning to
14 testify on the highway and transportation
15 components of the economic stimulus bill.

16 And also I want to talk about
17 SAFETEA-LU reauthorization because I think
18 that's -- another very important issue that --
19 that we have to keep right on the forefront of
20 the radar screen.

21 I brought -- instead of written
22 testimony, I brought a PowerPoint
23 presentation, which I think everybody has, and
24 I'll be referring to various slides on that as
25 we -- as I go through what I want to talk

1 about.

2 Just for your information, ARTBA
3 represents the transportation construction
4 industry in Washington. We have about 5,000
5 members. We spend a lot of time dealing with
6 Congress and federal agencies on
7 transportation issues.

8 I've been the chief economist for the
9 association since 1996. And I've testified
10 before Congress. I do a lot of studies and
11 things like that. So I'm very pleased to be
12 here to help you with your deliberations.

13 I'll probably do much more of a
14 national perspective whereas Secretary Ritzman
15 gave you a much -- an excellent local
16 perspective. I was very impressed by what
17 PennDOT seems to be doing to get ready for
18 this.

19 The Associated Pennsylvania
20 Constructors is one of our largest and closest
21 state affiliates and its executive vice
22 president, Bob Latham, whom you all know, I'm
23 sure, is here this morning, and I'm sure he's
24 happy to assist you in any way that he can on
25 anything that you're working on in this.

1 Let me go to -- let's start with this
2 -- I'll start at this slide now.

3 And let me say I provided a handout
4 that you all have. It's in the -- the packet
5 that gives the details, what's in the House
6 bill and the bill working its way through the
7 Senate.

8 And Jim gave you an excellent kind of
9 summary of what's going on. I think the main
10 things, first, is that both the bills will
11 provide about \$30 billion for highways.

12 This represents -- and I think to put
13 it into perspective -- this represents about
14 three-quarters of a year of annual funding
15 under the Federal Highway Program.

16 For fiscal year '09 the Federal
17 Highway Program is funded at \$41.2 billion.
18 So \$30 billion is a big chunk of money to try
19 to deal with it in as quick a time as this
20 bill requires.

21 About two-thirds of the money as you
22 work through it -- Jim gave you, again, a lot
23 of details -- goes to the state and about a
24 third goes to the MPO's.

25 And I think the important point about

1 all this is that about half of the total,
2 about 15 billion nationwide -- I think, as Jim
3 pointed out, the Pennsylvania share would be
4 somewhere in the range of a billion dollars.
5 I think the -- the annual funding share this
6 year will be about 1.4 billion. So, again,
7 it's a big -- a big chunk of additional
8 money.

9 This has -- this 15 billion has to be
10 obligated under the House bill within 90 days,
11 the Senate bill within 180 days. The final
12 legislation will probably be somewhere in
13 between there.

14 That's the way, you know, the
15 conference committees generally work, is to
16 look at the numbers and split the difference.
17 But -- and the purpose of this is, of course,
18 to get the money out there as fast as
19 possible.

20 Because you have to remember this
21 isn't a highway bill. It's a stimulus bill.
22 It's a jobs bill. It's a job creation bill.
23 And the highway -- the highway spending is
24 part of it.

25 But the purpose isn't to deal with

1 highways. It's to deal with jobs. So they
2 want to get as much of this money out as fast
3 as possible.

4 To facilitate getting the money
5 moving, both the House and Senate bill,
6 hundred percent federal share, there's no
7 state match. The distribution formula will be
8 along the lines of the current highway bill,
9 so that there's no -- nothing holding us up in
10 the way of -- of, you know, food fight between
11 the states.

12 The funds can be used pretty much for
13 anything since the -- they're eligible for
14 STP-eligible project -- projects. As Jim
15 pointed out, there is some set-asides here
16 that will make this a little bit more
17 complicated, because nothing in this bill,
18 there's nothing actually that reduces any of
19 the federal requirements either. The -- the
20 projects still have to be -- you know, have
21 the environmental approvals. Davis-Bacon
22 still applies. There's no waiver of any of
23 the requirements.

24 But there's nothing that's new or
25 additional here other than to get the money

1 out as fast as possible.

2 And I think one thing that -- to
3 focus on here is that this will not affect the
4 Highway Trust Fund. That the -- it's all
5 coming out of the general fund.

6 I think another thing to remember is
7 that when the states have to obligate -- you
8 know, that there's a requirement to obligate
9 half of this money within 90 day, I mean that
10 doesn't remove any of the requirement to
11 obligate your regular federal money, which,
12 you know, the state has to keep processing
13 on.

14 So we're looking here at a big
15 additional burden on the state DOT to get this
16 money out while it still has to get the
17 regular -- its regular money obligated by the
18 end of September.

19 So the Senate is still working on
20 their version of the bill. Most of what is in
21 the bill, you know, in the core bill, will
22 probably not be affected.

23 There are a couple of amendments.
24 One that was -- that went down to defeat
25 because it couldn't get a 60 vote majority to

1 add money.

2 There is a bill, an amendment coming
3 up from Senator Boxer and Senator Inhofe that
4 would -- very complex kind of situation but
5 would make available up to \$50 billion for
6 highway projects in addition to the 30 billion
7 that will be in the -- the bill if the state
8 recipients of other money in the -- in the
9 stimulus bill can't use it within a certain
10 time period, that the state government is
11 going to be asked to put together a list of
12 projects that -- in addition to the 30
13 billion, that could be started pretty quickly
14 if there's some of this money that comes
15 back.

16 Then there is a -- but, you know,
17 what I'm also concerned about -- and this is
18 something we have to watch -- is that this
19 bill is going to need some Republican votes to
20 pass and the Republican members of the Senate
21 are very concerned about the spending side of
22 the bill, that it's not -- that they're
23 spending here, it's not going to be actual
24 stimulus spending.

25 And so I'm a little bit concerned

1 that when all is said and done here, this --
2 the highway money may be in some jeopardy as
3 well, and we have to keep watching that.

4 So I think that's -- that's something
5 to -- to -- to be very concerned about as this
6 bill works through the Senate, that there will
7 be some efforts to cut some of the spending.

8 And, of course, our association will
9 fight that tooth and nail, but we think
10 everybody else should be looking at that as
11 well.

12 Then there's an amendment from
13 Senator Baucus which while not affecting the
14 stimulus spending itself is still very
15 important.

16 There's a provision in SAFETEA-LU
17 that rescinds \$8.75 billion of contract
18 authority on September 30th, which means every
19 state DOT will have to go into its contract
20 authority and erase some of that.

21 And what our concern is, first, that
22 this will -- you know, there may be some areas
23 here where the states will actually lose their
24 ability to spend some money, but, more
25 important, when SAFETEA-LU expires it's

1 unlikely that we'll have a new authorization
2 in place.

3 So, you know, of course, there will
4 be short-term extensions or maybe some kind of
5 extension if the bill isn't -- you know, if a
6 new authorization isn't in place on September
7 30th. But if it turns out that the
8 appropriations bill is the only thing that we
9 have and they can't -- you know, they're not
10 supposed to create contract authority, that
11 this money may be the only money that's
12 available.

13 So our view is that it doesn't make
14 sense to rescind 8.75 billion of contract
15 authority if that might be necessary to
16 provide funds in the interim between when
17 SAFETEA-LU expires and there's a new bill in
18 place.

19 It's no -- there's no cost to the
20 Baucus amendment, so it's a good insurance
21 policy.

22 There's also money in the bill for
23 transit and airports and passenger rail, and
24 that's in our -- our detail side by side.

25 Let me go on to the three charts here

1 that look at issues that have been raised
2 about the -- about the stimulus.

3 First, very legitimate question, is
4 can highway investment create jobs quickly?
5 Now we know they can create jobs.

6 The Federal Highway Administration
7 periodically does a study of job creation from
8 highway investment, and they just released one
9 last year in which they estimate for a billion
10 dollars of actual highway construction that
11 you generate or support about 28,000 jobs.

12 Now, a little bit less than those --
13 a little bit less than 10,000 of those jobs
14 would be actually on-site construction jobs.
15 Another 4 to 5,000 would be jobs in materials
16 and equipment suppliers. And then the rest of
17 the jobs are jobs that are supported or
18 created as those construction workers and
19 those manufacturing employment -- employees go
20 out and spend their money at the Wal-Mart or
21 the Food Lion or the Target and that generates
22 demand for other products throughout the
23 economy.

24 So you get -- certainly you do get
25 some job creation, and it's very important.

1 The question is whether it can be done
2 quickly. And, frankly, we don't have any real
3 experience with a bill like the one that's
4 working through the House and Senate.

5 The last time highway investment was
6 used as a kind of counter cyclical measure was
7 back in the 1982 recession when the
8 unemployment rate got up above 10 percent. At
9 that time Congress and President Reagan raised
10 the gas tax five cents and increased highway
11 investment under the core highway program.

12 Well, the core highway program
13 allowed -- you know, is -- is the program that
14 addresses big projects, whether it's planning
15 time, designing, environmental reviews, and
16 things like that.

17 So what happened was a lot of
18 construction work didn't occur till '84 and
19 '85 when the economy had already come out of
20 the recession.

21 So we've learned from that
22 experience, and this bill addresses the quick
23 start aspect of this by requiring that the
24 money be obligated very quickly, you know,
25 within 90 days in the House bill, 180 days in

1 the Senate bill. Hopefully for shovel-ready
2 projects.

3 And so it should spend out much
4 faster. And our hope is that this -- this
5 bill will -- or at least the highway component
6 of this bill will support the goal of the --
7 of the -- of the legislation to get projects
8 moving and jobs created very fast.

9 Second issue, can state DOT's and
10 MPO's actually handle this money? Can they
11 get \$15 billion obligated within 90 days while
12 they're still trying to do their regular
13 highway program obligations?

14 And -- and I guess the question -- I
15 put a question mark there because we don't
16 know that. PennDOT seems to be way -- way
17 along the curve, and that's a very hopeful
18 sign. I hope the other DOT's are paying
19 attention the same way.

20 There's a lot -- a lot of things they
21 can and should be doing to -- to facilitate
22 this. And I think when it comes to this
23 question, can they do it, I don't think that
24 there is a -- I mean I don't think we can let
25 the answer be no.

1 And the reason for that is that this
2 bill is kind of going to be a dress
3 rehearsal for reauthorization.

4 Now, we're looking for a big increase
5 in federal funding in the next six-year
6 authorization. SAFETEA-LU topped out at 41
7 billion.

8 To just maintain our current system
9 would require a federal expenditure up in the
10 60 billion, the \$70 billion range. And if the
11 state DOT's can't get this \$15 billion out in
12 90 days or 180 days and some of this money
13 gets turned back, I mean how are we going to
14 be able to go up to Congress and say we can
15 handle a increase from 40 to \$60 billion in
16 the -- in the core federal program?

17 So I mean I think the answer to that
18 is that we can't let this slip, that this has
19 to be done.

20 And then finally there's a question
21 which I think you all are going to address in
22 a hearing next week which is can the
23 contractors handle this? And there I think,
24 you know, Bob and, you know, some of the
25 people that you'll be talking to, I suspect --

1 you have a hearing on this next week -- will
2 tell you that the answer to this is not an
3 equivocal yes.

4 And I have some charts here to show
5 what's been going on at the contractor level
6 that makes it, you know, kind of imperative
7 that we get some of this money going out.

8 First, we have this chart showing
9 employment by highway construction contractors
10 on a month-by-month basis for the last three
11 years. And as you can see highway
12 construction contractors have been laying off
13 people this year. In November we had 26,000
14 fewer people on their payrolls than November a
15 year ago.

16 So there's a big pool of trained
17 workers out there who are ready to go back to
18 work. And, of course, a lot of highway
19 construction work gets subcontracted. We --
20 we can't trace the subcontractors because that
21 gets pooled in with subcontractors and all
22 kinds of other projects, but clearly if the
23 contract -- the highway -- the general
24 contractors are laying off workers so are the
25 subcontractors.

1 And if you look at the next -- the
2 bar chart, you see that there is
3 one-and-a-half, almost one-and-a-half million
4 highway construction workers -- or not
5 highway, but construction workers who are
6 unemployed. Now, not all of these are trained
7 on highway construction. But there's a lot of
8 overlap here. So we do have a big pool. And
9 this is twice as many construction workers are
10 -- as are normally unemployed at this time of
11 year.

12 And for the past few quarters ARTBA's
13 contractor members in our quarterly survey
14 have been telling us that they've been doing
15 less work than the same quarter a year
16 before.

17 We have a chart here which shows
18 the -- you know, the -- when we're asking them
19 how much work they're doing that we're now way
20 down on the negative side of that whereas a
21 few years ago they were saying they were doing
22 more work.

23 And then we have a question on our
24 quarterly survey, you know, what percentage of
25 your capacity are you actually using right

1 now? And in the fourth quarter survey, 44
2 percent of our members say that they were
3 operating at 75 percent or less of their
4 capacity, which is a record number, as you can
5 see, from this -- this chart.

6 A few quarters ago we asked them, you
7 know, what percent -- a few quarters ago about
8 35 to 40 percent of our members said that they
9 were operating at full capacity. In the
10 fourth quarter of '08 two percent said they
11 were operating at full capacity.

12 So the industry has capacity to take
13 on this significant amount of new work. And
14 because of the importance of this, both to the
15 economy and to our industry, for this highway
16 stimulus to work in creating jobs, I mean we
17 are going to be tracking a number of measures
18 to judge the impact.

19 Of course, one thing is what projects
20 are being obligated and how much is getting
21 obligated, et cetera, and the -- the
22 legislation is probably going to require
23 periodic reports from the state DOT's and the
24 FHWA divisions of what's actually being done
25 with the job.

1 But the real issue then is, is
2 creating jobs, not is just the money getting
3 obligated, is it getting the contractor or
4 those projects started, is it creating jobs?

5 And we're going to be tracking that
6 monthly employment number, the monthly
7 employment by highway contractors. Our
8 quarterly survey, we ought to be seeing
9 contractors saying, yes, we're doing more work
10 now than we did a few quarters ago because of
11 this stimulus.

12 And also we have a way of
13 contracting [sic] the new contracts awarded.
14 Because you can see in the -- in the next
15 chart, which is the bar chart, in '08 state
16 and local DOT's put out about 52-and-a-half
17 billion dollars' worth of new contracts for
18 highway and bridge construction projects.

19 And if this stimulus is working, we
20 ought to see the number going up substantially
21 in '09. Well above 52 billion. And we can
22 track this on a state-by-state basis as well.

23 So that's, you know, our -- our real
24 hope here is that this money will be getting
25 out there and will be generating jobs and

1 generating projects.

2 Now, one thing that can enhance the
3 impact of the highway stimulus money is that
4 the inflation in construction material prices
5 that has plagued the DOT's for the last five
6 years seems to be coming to an end. And I
7 think that's excellent news because it now
8 means any money that we're putting out is
9 going to be buying more -- more construction
10 work.

11 Since 20 -- 2003 the cost of highway
12 construction projects has risen nationwide
13 about 40 percent. Every state is different.
14 But I know PennDOT has been having a problem
15 like this as well as everybody else.

16 It's been driven by a 60 percent
17 increase in the cost of construction
18 materials, which has eroded the purchasing
19 power of the federal program, it's eroded the
20 purchasing power of state funds. It's been a
21 big problem.

22 As you can see from this -- this line
23 graph, the green line shows the producer price
24 index for highway and street construction
25 materials and that's been skyrocketing for

1 five years.

2 And 2008, as this bar chart shows,
3 2008 was the worst. We had thought at the end
4 of 2007 that this was going to kind of quiet
5 down. But it didn't. The -- the increase
6 in -- in oil prices in 2008 shot up the cost
7 of asphalt and so the cost of materials
8 overall rose about 14 percent in 2008.

9 Which as the next chart shows has
10 really eroded the -- the -- the volume of
11 construction work that we've been able to buy
12 both at the state and with federal -- with
13 federal and state money.

14 The real construction activity in
15 2008 was down about 10 percent from 2005
16 because of this.

17 But as the next chart, the line chart
18 with its red line shows, since last summer,
19 the prices of -- of -- of construction
20 materials have been falling.

21 The recession, which has reduced the
22 demand for construction materials,
23 particularly the collapse of home building,
24 and the freefall in oil prices, have all
25 contributed to this.

1 And even -- now, I think this line is
2 going to keep going down for a little bit but
3 even if it -- if it levels out, where it is
4 now, it means the average cost of highway
5 projects in 2009 would be about six-and-a-half
6 percent less than 2008.

7 And it's likely that that number is
8 actually going to be a bigger gap. You know,
9 10 percent, 15 percent less.

10 So it's a good reason to get the
11 stimulus money moving while construction costs
12 are low.

13 But to finish up, I want to emphasize
14 that the stimulus bill is not a solution for
15 the nation's need for more investment in
16 highways and other transportation modes.

17 It's far more important to get a good
18 reauthorization bill, and we got to be
19 focusing on that. And for that, there is a
20 very serious problem looming that makes this
21 so very important to get this done and get it
22 done in a timely way, which is that highway
23 account revenues for the next -- for the
24 foreseeable future are well short of the
25 amounts that are needed just to maintain the

1 funding in the federal program under
2 SAFETEA-LU and it's way below what we need to
3 meet our investment needs.

4 In the next chart, the blue, red and
5 yellow line chart, the blue line shows
6 projected highway account revenues based on
7 the Treasury's midyear forecast.

8 They have not given us a new January
9 forecast because the new budget for 2010 has
10 not yet come out, but that number, when it
11 comes out, will probably be a bit lower, which
12 will make this problem even worse.

13 The red line shows the funding level
14 that was appropriated under SAFETEA-LU. Now,
15 there was a big gap there and that gap was
16 filled because there was a balance in the
17 highway account of about 12 or \$13 billion
18 that could be drawn down to pay for some of
19 the projects that weren't being funded under
20 ongoing revenues.

21 But that balance is gone now, and
22 there's no balance when we come to the next
23 bill.

24 And then there's the second problem,
25 which is that the revenues are far less than

1 the minimum needed just to maintain current
2 conditions. As you can see from the yellow
3 line, we ought to, at the federal level, be
4 spending about \$60 billion a year now, and
5 that would be enough to give us -- to maintain
6 conditions, address some of our structural
7 problems on bridges, and also create enough
8 new capacity to maintain -- to keep congestion
9 around the metropolitan areas from getting
10 worse than it is now.

11 But we're not doing that, and that's
12 why congestion keeps getting worse and worse
13 every year, why we keep having these bridge --
14 bridge quality problems and things like that.

15 So we're going to need a big increase
16 in revenues. And -- and there's a
17 particularly troubling problem looming for
18 2010 that has to be dealt with pretty much
19 right away, that has to be dealt with before
20 we get to 2010, which is that most of the \$34
21 billion of revenues that are projected into
22 the highway account in 2010 are tied up,
23 already committed to pay the ongoing costs of
24 projects that got underway in '08 and '09.

25 The federal program is a

1 reimbursement problem -- program. As the
2 contractors do the work, they get paid out of
3 the Highway Trust Fund. And so a lot of
4 projects that got started in '08 and '09 and
5 will be continuing into 2010, a lot of that
6 money is going to be needed just to pay the
7 contractors for the work they're doing on
8 those projects.

9 So there's only going to be 5 or \$6
10 billion of revenues coming into the trust fund
11 in 2010 that can be used to finance new
12 projects.

13 And the way the spend out formula
14 works, that puts a cap of about \$22 billion on
15 the new funding that will be potential --
16 possible in 2010 without new revenues.

17 So after 2010, the revenue situation
18 could support a highway program of about 33 to
19 \$35 billion. Again, by comparison '09, 41
20 billion.

21 So we are looking at a six-year
22 period here where we'll -- we'll not get back
23 even to any levels that would be
24 possible under -- that we -- you know, that we
25 had under SAFETEA-LU unless there's new

1 revenues.

2 And let me just end up by saying that
3 there's some options here. Number one,
4 Congress, of course, could simply let the
5 program fall to 22 billion in 2010 and then
6 33, 35 billion, in which case the theory would
7 be that this is a state -- the highways are a
8 state and local issue. Highway -- state and
9 local governments have to come up with the
10 money for that. Public-private ventures can
11 take up some of the slack by building new
12 roads with tolls, et cetera.

13 But our view at ARTBA is that would
14 be a disaster. It would be a diaster for the
15 nation. We don't think that these other
16 possible -- you know, that there's a potential
17 out there to take up that kind of slack and
18 particularly not to get up to the investment
19 levels that we need to maintain conditions,
20 let alone start doing some improvements.

21 ARTBA, the financing commissions --
22 there are two financing commissions created
23 under SAFETEA-LU that have now made reports --
24 most of the other stakeholders all believe
25 that we need to maintain a strong federal

1 presence; that we need to have new revenues,
2 more revenues coming into the Highway Trust
3 Fund; user fee increases, like an increase in
4 the federal gas tax, is one option; and both
5 of the financing commissions have called for
6 increases in the gas tax of at least ten
7 percent to get up to the level that we need to
8 to maintain conditions which would require
9 even a more -- even larger, but there's other
10 things that could be used as revenues as
11 well. Certainly we could use general funds.
12 We haven't done that in over 50 years. And
13 it's not what we'd like to see, but it's a
14 possibility.

15 Issuing bonds. A proposal has been
16 made to bond some of the federal money, in
17 which case we would have to pay it back over
18 time.

19 But that's not an unreasonable
20 approach because a lot of these, you know,
21 particularly new highways are used over a
22 30-year period and you have to ask why we --
23 why we should up-front pay for those when we
24 could spread the cost over the -- the years
25 that they're being used.

1 But we can't think that the stimulus
2 bill will solve our investment needs. The
3 stimulus bill is important, but the real focus
4 of every legislator in this country should be
5 on the reauthorization legislation. And
6 that's what we're focusing on at ARTBA once we
7 get past the stimulus bill.

8 So I hope that was helpful and I'm
9 happy to answer any questions.

10 CHAIRMAN MARKOSEK: Thank you very
11 much. That was very helpful. I'd also point
12 out to members that there's a chart at the end
13 of your handout as well, besides the slides,
14 that spells out some of this.

15 DR. BUECHNER: Yes. Yes.

16 CHAIRMAN MARKOSEK: Very handy.

17 I think Representative Siptroth,
18 yes.

19 REPRESENTATIVE SIPTROTH: Thank you,
20 Mr. Chairman.

21 Mr. Buechner, thank you for the
22 presentation. I appreciate that.

23 I know -- and I'm going from the end
24 of your presentation, you know, back to the
25 beginning for my questions. But I know a

1 number of states, including Pennsylvania, at
2 one time actually had significant debt service
3 related to bonds they floated for highway
4 funding.

5 DR. BUECHNER: Yes.

6 REPRESENTATIVE SIPTROTH: I know
7 California substantially has high debt service
8 related to that.

9 DR. BUECHNER: Yes.

10 REPRESENTATIVE SIPTROTH: My only
11 problem with that is it severely distracts
12 from utilization of funds for upcoming and
13 current highway -- highway transportation
14 needs. So I don't know if that's the real way
15 to go or not.

16 But what are your feelings on Act 44
17 in Pennsylvania?

18 DR. BUECHNER: I'm sorry. What was
19 the last?

20 REPRESENTATIVE SIPTROTH: The Act 44
21 which is the tolling of Interstate 80.

22 DR. BUECHNER: Oh, tolling. That's a
23 good -- that's a good question, and I don't
24 think our association has a -- a position on
25 that.

1 I mean I -- I -- certainly it would
2 be a source of revenues and a -- definitely a
3 user fee source of revenue. I think our -- we
4 have a very active public/private ventures
5 division that has -- that has held a big
6 conference in Washington every 20 years -- or
7 for the last 20 years, and we're very
8 supportive of using, you know, public/private
9 kind of ventures for -- for new construction.

10 I think our -- our position on this
11 is that if you were to do something like
12 tolling of -- of I-80 that -- that the money
13 ought to be used for highway improvements, not
14 going into general fund revenues or into other
15 things that -- that -- I mean this would be an
16 issue for the state, although I guess the
17 Federal Highway Administration would have some
18 say about that as well.

19 But our -- our basic position on this
20 is that when things like that are done that
21 the money ought to be used for highway
22 improvements. Not like some -- you know,
23 like, I think, with the Chicago Skyway where
24 they lease that and then they use some of that
25 money for other things.

1 We wouldn't be supportive of that.
2 But we would be supportive, if you did that,
3 of using the revenues for highway
4 improvements.

5 REPRESENTATIVE SIPTROTH: I think --
6 I think our -- our particular bill that was
7 passed has been delayed by the permitting
8 process of the Federal Highway
9 Administration. It was well drafted, and in
10 fact, it was the funds that were going to be
11 derived from that tolling would have been used
12 for highway construction.

13 DR. BUECHNER: Uh-huh.

14 REPRESENTATIVE SIPTROTH: So that
15 specifically was stated. So I think that was
16 well drafted.

17 And I just wanted -- and, again,
18 unfortunately we don't have a law in
19 Pennsylvania that would allow significant
20 monies to be placed from the private sector
21 into a public/private partnership. We tried
22 that -- that last session. Hopefully, that
23 will come back out in this session.

24 DR. BUECHNER: Well, as I said, we've
25 been holding these conferences for 20 years

1 and it's still an infant industry. So
2 there's -- there's still a lot of learning
3 that needs to take place on how these things
4 work and what kind of benefits and costs there
5 are.

6 So, you know, at some point -- you
7 know, a number of states have been doing this
8 and, you know, at some point as the
9 information develops and the experience around
10 the country develops, you know, maybe states
11 like Pennsylvania will move to these -- to
12 make it easier to do that. I'm --

13 REPRESENTATIVE SIPTROTH: And I
14 very -- very well affirm that I think we have
15 the construction industry's ability to move
16 forward with the stimulus package for the
17 coming years.

18 DR. BUECHNER: And, of course, Bob
19 can tell you much better about what -- what
20 the contractors here in Pennsylvania are --
21 are ready to do.

22 REPRESENTATIVE SIPTROTH: Thank you
23 very much.

24 Thank you, Mr. Chairman.

25 CHAIRMAN MARKOSEK: Representative

1 Chelsa Wagner.

2 REPRESENTATIVE WAGNER: Thank you.

3 DR. BUECHNER: Yes, ma'am.

4 REPRESENTATIVE WAGNER: If I could
5 ask the same questions that I asked Deputy
6 Secretary --

7 DR. BUECHNER: All right.

8 REPRESENTATIVE WAGNER: -- Ritzman in
9 regards to the federal stimulus bill. You
10 noted that -- I guess this is the House
11 version -- that 20.4 billion would be going
12 directly to the states with 7.4 going to the
13 MPO's.

14 The question I asked him, and I
15 wonder if that would have any implications for
16 a possible answer, is what would be the role
17 of this committee, if any, in that process?

18 DR. BUECHNER: Well, I -- I don't --
19 you know, I don't know what kind of role you
20 all play in relationship with project
21 selection and things like that with PennDOT.

22 But I think, given the nature of this
23 legislation, which is to get projects going
24 quickly and to get jobs created as quickly as
25 possible, that whatever kind of role you have

1 with PennDOT, it should be to get the projects
2 that we can get going as -- quickest, be the
3 ones that they -- that they focus on.

4 I know at the federal level members
5 of Congress like to earmark money for specific
6 projects. I don't know how you do it here in
7 -- in Pennsylvania.

8 What tends to happen when a member --
9 when members of Congress earmark for specific
10 projects is that somehow or another that money
11 doesn't get spent.

12 We have -- in SAFETEA-LU there was
13 \$20 billion worth of earmarks. At the end of
14 fiscal year '08 12 billion of earmarked money
15 had not even been obligated.

16 So -- and so if you really want to
17 get this money going as fast as possible, you
18 need to support PennDOT's getting its list
19 together and its projects advertised as
20 quickly as possible and put up as little, you
21 know, impediments to that as possible.

22 But, once again, I don't know what
23 your regular relationship is with PennDOT on
24 that.

25 So, again, our goal as a national

1 association is to see this money get out there
2 as fast as possible and get projects going and
3 people to work as fast as possible.

4 CHAIRMAN MARKOSEK: Okay. Thank
5 you.

6 Any other? Representative Ron
7 Miller.

8 REPRESENTATIVE MILLER: Thank you,
9 Mr. Chairman.

10 It's always been my opinion that, no
11 matter what they're worth, things like
12 Davis-Bacon -- and I think that cannot be
13 waived in this; it still is in effect and
14 stuff -- adds costs to projects. So if this
15 is a job stimulus bill --

16 DR. BUECHNER: Yeah.

17 REPRESENTATIVE MILLER: -- why is
18 Congress, in your opinion, not looking at
19 waiving that and funding more projects with
20 the money available?

21 And a follow-up to that would be, are
22 they pushing for the -- to be able to expedite
23 things like the environmental reviews and
24 things so all states will be able to
25 participate if they have projects that haven't

1 gone through -- quite through all those
2 reviews?

3 DR. BUECHNER: Number one, I think
4 Davis-Bacon, environmental review, those are
5 all very controversial things. And I think
6 part of what they wanted to do was get this
7 bill enacted as fast as possible so there's as
8 few controversial things as possible in it.

9 And then again, you know, in reality,
10 Democrats are in control of the House and the
11 Senate. Now, they're not going to waive
12 Davis-Bacon even if it -- you know, no matter
13 what. Environmental reviews, they're not
14 going to waive that.

15 But if you go to the Federal Highway
16 Administration's website, the Federal Highway
17 Administration has already set up an
18 information -- information resource for state
19 DOT's on the website that explain what -- what
20 the Federal Highway Administration is going to
21 be doing to expedite things like getting
22 projects on the STIP which aren't on the STIP
23 now.

24 I mean it has to -- you know, the
25 requirement for -- for federal monies the

1 project has to be on the STIP. But if -- if
2 PennDOT has some projects they want to do or
3 some of the state -- or some of your counties,
4 some of your municipal governments have
5 projects they want to do that aren't on the
6 STIP, the Federal Highway Administration is
7 going to expedite getting on -- getting on --
8 getting them on there and they -- they said
9 they can do it in -- in 30 days.

10 Environmental reviews, I mean you
11 still have to do that. Our hope is that,
12 given the response that AASHTO got to its --
13 its survey earlier this year about the number
14 and value of projects that are shovel ready,
15 is that for this bill most of those projects
16 will also -- already gone through the
17 environmental review process.

18 Any project that has -- that still
19 has to start the NEPA process or something
20 like that simply isn't going to be ready to
21 obligate these funds.

22 And -- and for a big issue like that,
23 Davis-Bacon, environmental review, those are
24 issues that are more appropriate to the
25 reauthorization bill than to the stimulus

1 bill.

2 REPRESENTATIVE MILLER: Just a quick
3 follow-up, Mr. Chairman. So -- but you also
4 stated that there is no requirement for a
5 state match on a project.

6 DR. BUECHNER: That's right. This --
7 these will be a hundred percent.

8 REPRESENTATIVE MILLER: So we could
9 or a state could opt to fund a certain project
10 totally with federal dollars --

11 DR. BUECHNER: Yeah.

12 REPRESENTATIVE MILLER: -- meet all
13 those requirements --

14 DR. BUECHNER: Yeah.

15 REPRESENTATIVE MILLER: -- and if it's
16 a state that didn't have a prevailing wage
17 scale of their own --

18 DR. BUECHNER: Yeah.

19 REPRESENTATIVE MILLER: -- they could
20 stimulate the economy even further by being
21 able to do other projects?

22 DR. BUECHNER: I don't think there's
23 any federal requirements on -- on projects
24 that use a hundred percent state money.

25 So, you know, it -- it might be that

1 some of the projects that are on the STIP that
2 you had originally thought you'd use 80/20, if
3 you do those with hundred percent state money
4 and then take that 20 and put it on state
5 projects, yeah, you're exactly right.

6 REPRESENTATIVE MILLER: So --

7 DR. BUECHNER: That you could use the
8 state money on other projects that you could
9 get, in a sense, more value.

10 REPRESENTATIVE MILLER: So we could
11 increase the number of projects being released
12 to be done by looking --

13 DR. BUECHNER: You'd have to work
14 that out with PennDOT. I don't get down -- I
15 mean I'm not --

16 REPRESENTATIVE MILLER: Understood.

17 DR. BUECHNER: But to me, it sounds
18 like it's reasonable.

19 REPRESENTATIVE MILLER: You know,
20 we'd have to suspend prevailing wage
21 ourselves.

22 DR. BUECHNER: Yeah.

23 REPRESENTATIVE MILLER: But if we did
24 that --

25 DR. BUECHNER: Yeah.

1 REPRESENTATIVE MILLER: -- we could
2 increase the number of projects and put more
3 people to work.

4 DR. BUECHNER: If you were to do
5 that.

6 REPRESENTATIVE MILLER: Thank you.

7 DR. BUECHNER: But, again, that's
8 not -- not something I would be able to
9 comment on. I mean our --our association has
10 agreed with the labor unions not to -- not to
11 lobby on that particular issue.

12 REPRESENTATIVE MILLER: And I have
13 not. So I appreciate that.

14 DR. BUECHNER: Yeah.

15 REPRESENTATIVE MILLER: Thank you,
16 Mr. Chairman.

17 CHAIRMAN MARKOSEK: Okay. I have a
18 couple of questions, too.

19 You had mentioned the funding for
20 moving forward in Congress some of the studies
21 that have been made and some of their
22 recommendations relative to fuel taxes, those
23 kind of things.

24 DR. BUECHNER: Yeah.

25 CHAIRMAN MARKOSEK: It's probably an

1 unfair question to you, but you have some
2 Washington insight that perhaps we don't.

3 If you had to pick -- say a scale of
4 one to ten, ten being the most likely, how
5 would -- how would you think that the Congress
6 may say this session deal with -- deal with
7 and pass an increase in fuel tax?

8 DR. BUECHNER: There's -- there will
9 be a lot of forces acting on that. One of the
10 main forces will be that when they -- the
11 SAFETEA-LU expires and it comes time to
12 authorize a new highway bill, as I pointed
13 out, the revenues under the existing tax rates
14 will be insufficient even to continue funding
15 the program at its current level. So there
16 have to be some new revenues.

17 And to improve it, I mean I think
18 Congressman Oberstar, who is the chairman of
19 the House T and I Committee, wants a
20 significant increase in the size of the
21 surface transportation bill.

22 He's talking about a half a billion
23 dollar bill versus 286 under the -- the
24 current law.

25 Again, that would require new

1 revenues. So the pressure will be on Congress
2 to come up with new revenues.

3 The easiest and most
4 straightforward -- or should I say
5 traditionally, the main source of revenues for
6 the Highway Trust Fund has been the federal
7 gas tax.

8 But -- and with, you know, the -- the
9 last time we did a reauthorization, when -- in
10 the 2003 to 2005 period, both the President
11 and the leadership in the Congress was -- was,
12 you know, kind of heels in their sand, you
13 know, heels in the sand opposed to any kind of
14 gas tax increase. So -- so there was no
15 support from anywhere for a gas tax increase.

16 Certainly the current president has
17 expressed very strong support for highway
18 investment, and we know the leadership in the
19 Congress, both houses, now is much more
20 supportive of increasing highway investment.

21 But, nonetheless, it's still a
22 long -- a long way from supporting investment
23 to be willing to support a gas tax increase.

24 And both parties have been burdened
25 by previous gas tax increases. If you'll

1 remember when -- when president -- the first
2 President Bush was president and his, you
3 know, he -- he -- his mantra was no new taxes,
4 there was a budget agreement that was hashed
5 out between the Democrats in Congress and the
6 Administration that -- as well as cutting
7 spending, also increased the gas tax by
8 two-and-a-half cents and then President Bush
9 was beaten the next -- you know, in his
10 re-election campaign.

11 And the same thing happened to the
12 Democrats in 1993 when they increased the gas
13 tax by another 4.3 cents and the number -- and
14 then they lost control of the Congress.

15 So neither of these was probably the
16 reason why they were beaten, but it's still in
17 the institutional memory. So it's not going
18 to be easy.

19 Hopefully, if they don't come up with
20 a gas tax increase, they'll come up with some
21 other revenue source.

22 CHAIRMAN MARKOSEK: Okay. That's a
23 fair answer to that -- to that question.

24 Just a couple of other things.
25 Relative to stimulus now, what you know about

1 it -- and I know it's very much up in the air
2 at this point in time.

3 Do you think there would be or do you
4 know of any talk that would have a portion of
5 a stimulus that would be available for private
6 match?

7 This is sort of, you know, what
8 Representative Siptroth was getting at, but we
9 do not have in Pennsylvania right now a P3 law
10 on the books.

11 DR. BUECHNER: Right.

12 CHAIRMAN MARKOSEK: So if that would
13 be a part of the stimulus, do you foresee that
14 being part of it, that it may affect us in
15 that sense that we would perhaps not be --
16 have, you know, the availability of some of
17 that money because we don't have that right
18 now?

19 DR. BUECHNER: I don't think I've
20 seen any provision -- certainly no provision
21 in the House bill that would require that, and
22 I don't think I've seen anything in the Senate
23 bill.

24 There may be a provision in the
25 Senate bill that would direct some of the

1 money to the TIFEA program, but that's not a
2 private -- that's not one that requires a
3 private match.

4 I don't think you'll see that in the
5 stimulus bill. Again, major policy changes
6 like that are much more appropriate for the
7 reauthorization bill which is where you might
8 see it.

9 CHAIRMAN MARKOSEK: And just one
10 other thing. You had mentioned in your slides
11 the whole idea of inflation now has dropped --

12 DR. BUECHNER: Yes.

13 CHAIRMAN MARKOSEK: -- somewhat.
14 Probably because of the economy and --

15 DR. BUECHNER: Yeah.

16 CHAIRMAN MARKOSEK: -- presumably when
17 the economy picks up, you know, that could
18 also --

19 DR. BUECHNER: Yeah.

20 CHAIRMAN MARKOSEK: -- go back up.

21 DR. BUECHNER: Yeah.

22 CHAIRMAN MARKOSEK: But do you see
23 the stimulus causing inflationary problems of
24 its own just with that much money, you know,
25 too -- too many dollars chasing too few

1 services, that kind of typical definition of
2 inflation?

3 DR. BUECHNER: I don't see it from
4 the highway -- the spending. I mean it's not
5 a big enough chunk to do that.

6 However, to the extent that the
7 stimulus bill does help turn the economy
8 around, I mean as you point out, eventually
9 we'll get back to a point where construction
10 materials will once again be relatively
11 scarce.

12 CHAIRMAN MARKOSEK: Okay. Any
13 others? From the executive directors, any
14 questions? Okay. Thank you.

15 DR. BUECHNER: You're welcome.

16 CHAIRMAN MARKOSEK: Very well,
17 doctor. Thank you. Appreciate you being here
18 today.

19 DR. BUECHNER: Thank you.

20 CHAIRMAN MARKOSEK: Very good
21 testimony.

22 DR. BUECHNER: Thank you.

23 CHAIRMAN MARKOSEK: Very
24 enlightening.

25 DR. BUECHNER: Thank you.

1 CHAIRMAN MARKOSEK: Okay. Maria
2 Lehman is here, and she is the chair of the
3 National Government Affairs Committee of the
4 American Society of Civil Engineers.

5 Maria, thank you for attending here
6 today.

7 MS. LEHMAN: Thank you for the
8 invitation.

9 CHAIRMAN MARKOSEK: Traveling here to
10 the Capitol, and we really appreciate your
11 presence, and you may proceed when you are
12 prepared.

13 MS. LEHMAN: Great. While -- while I
14 start here, I'm actually passing out the
15 report card, which came out last week, and hot
16 off the presses, got it overnighted last
17 night.

18 I'm here to tell you a little bit
19 about ASCE's report card and what we've been
20 doing and how that impacts the stimulus bill
21 and how it impacts Pennsylvania.

22 First, a little bit of history about
23 the report card. In 1988 a presidential
24 commission was created to study and report on
25 the state of America's infrastructure. And

1 they gave a grade of C, and the title of their
2 report was *Fragile Foundations, A Report on*
3 *America's Infrastructure*.

4 It was basically a harbinger of
5 things to come. Ten years later ASCE took --
6 took the role of taking that information and
7 updating it and has been doing so on about a
8 four-to-five year basis.

9 It is a very large undertaking. We
10 get an awful lot of experts across the country
11 involved to be able to do that.

12 But we feel it's our mission as a
13 professional society to inform the American
14 public and the nation's decision-makers about
15 the condition of our roads, bridges, water
16 systems and public works.

17 Part one of this year's release was
18 actually moved up. We were going to do this
19 in March; but because of the pressure with the
20 stimulus bill, we actually broke it out into
21 two parts.

22 On January 28th, our president, Wayne
23 Klotz, and our executive, Pat Natale, was
24 joined by Governor Rendell in Washington to
25 launch the report card to talk about 15

1 different categories of infrastructure and a
2 five-year investment need and what the numbers
3 were.

4 We wanted to make sure that we got
5 the information out in its draft format in the
6 middle of the debate. We did a live webcast,
7 which is available, and there's information
8 that you can get actual specifics.

9 Part two is scheduled for March 25th
10 when we will actually have full white papers
11 on each individual area with specifics down to
12 the state level.

13 Right now it's more of a global look
14 across the country. It will be more specific
15 by the end of March.

16 And that will coincide with the
17 legislative fly-in where we will have
18 professionals from all 50 states coming to the
19 Capitol to talk about that.

20 For the second time in a row the
21 country's GPA is a D. I'm a mother of three
22 sons. If my sons came home with D's twice in
23 a row, they wouldn't come home.

24 I think it's -- it's deplorable that
25 we know we have an issue and we haven't taken

1 it on. And I think now with what we see with
2 the economy, it's high time that we pay
3 attention to the infrastructure.

4 I truly believe that a healthy
5 economy cannot be supported by a crumbling
6 infrastructure.

7 You have the grades in front of you.
8 I'm going to go quickly through all the
9 categories.

10 But, first of all, the needs. It's
11 \$2.2 trillion. That's the total investment in
12 the next five years to get us up to good
13 condition. In 2005 that number was 1.6
14 trillion.

15 That -- right now, that includes what
16 is currently being spent, but what
17 currently -- currently is being spent is about
18 45 percent of that number.

19 We have downwardly used inflation at
20 three percent for the projection for the next
21 five years, assuming that, you know, some of
22 the craziness that we saw in the marketplace
23 that was talked about before will not be there
24 for the next few years.

25 We have five key solutions. The

1 grades are low, but the problems are not
2 insurmountable if you take them one at a
3 time.

4 First of all, we are thrilled that
5 the infrastructure is receiving attention from
6 the president, from congressional leaders,
7 from governors. There's a lot of people that
8 are talking about it, and that has not been
9 the case in the past. It's been one of those
10 things that it's just not been talked about.

11 For strong infrastructure we need
12 strong leadership. These are not easy
13 decisions and they're expensive decisions.

14 We have to take into account
15 sustainability and resilience. Infrastructure
16 has to be built in a way that protects or
17 improves the natural environment while meeting
18 the needs of both current and future users.
19 These are facilities that will be with us for
20 30 or 50 years into the future.

21 We need national and regional and
22 state plans that are designed to meet clear
23 goals, including environmental restoration,
24 congestion relief and hazards reduction.
25 Resources need to be shared across

1 jurisdictions. That's always very difficult.

2 We need to look at life-cycle costs
3 and ongoing maintenance when we're looking at
4 planning. Those costs should be performed for
5 all infrastructure systems to account for not
6 only the initial design and construction but
7 the operation, maintenance, environmental
8 safety, and other costs that can reasonably be
9 anticipated.

10 Most of the time we look at
11 front-cycle costs, right, to be up-front, and
12 a little bit more money spent up-front can
13 save us a lot over the long term of an asset.

14 All levels of government, owners and
15 users, need to review their commitment to
16 infrastructure investment in all categories.

17 All available financing options have
18 to be explored and debated. Federal
19 investment has to be a part of the formula.
20 It has to encourage and leverage investment
21 from the state, local government as well as
22 from the private sector.

23 And users of the infrastructure need
24 to be willing to pay the appropriate price for
25 its use.

1 A little bit on our methodology. We
2 looked at the condition, capacity, operations
3 and maintenance, funding, future needs, public
4 safety, and resilience.

5 And not all criteria got the same
6 weight in each category because of how
7 different the infrastructure was that we
8 looked at.

9 Advisory councils, there was separate
10 advisory councils for every -- of the 15 items
11 and then an oversight council, and this
12 included people from both the public/private
13 sector, academia, construction, as well as
14 design individuals.

15 Let's start with aviation. It went
16 from a D+ in 2005 to a D. Right now travelers
17 are faced with increasing delays and
18 inadequate conditions, and a lot of them are a
19 result of long overdue modernization of an
20 outdated traffic control system.

21 We also have not been able to enact a
22 federal aviation program.

23 Despite surging prices in oil and
24 volatile credit markets, the Federal Aviation
25 Administration still predicts a three percent

1 annual growth in air travel.

2 Bridges stayed at a C. Twenty-six
3 percent of the nation's bridges are
4 structurally deficient or functionally
5 obsolete.

6 Pennsylvania leads that list
7 unfortunately as far as Pennsylvania's bridges
8 are concerned. We have made some progress in
9 rural areas, and now the bridges in urban
10 areas are starting to slip because those urban
11 bridges are very large and very expensive.

12 Seventeen billion dollars of annual
13 investment needs to be made on bridges in the
14 United States to get them up to par.

15 Dams stayed at a D. Dams age,
16 downstream development increases, and the
17 number of deficient dams has risen to more
18 than 4,000, including 1,819 high hazard
19 potential dams.

20 There are more than 85,000 dams in
21 the U.S. and the average age is 51 years old.
22 Going through a mid-life crisis and getting
23 into an old-age crisis.

24 Over the past six years for every
25 deficient, high hazard potential dam that's

1 repaired, two more are declared deficient.

2 There is a story that was actually
3 highlighted in 2005 at the Maumee Dam at Fort
4 Wayne, Indiana. We had a campaign then that
5 was called Postcards From the Edge. It had a
6 pothole with an individual's head in it. A
7 real big pothole. It had a horrific bridge
8 and it had this picture of the Maumee Dam as
9 kind of the highlight of some of the things
10 that need to happen.

11 We did this as part of a photo
12 contest from our members, and we got enough
13 attention at least on this dam that it has
14 been replaced. Four years later the same
15 person that took this picture took another one
16 and that's part of our report card release.
17 We will be using examples from across the
18 country at the end of March when we do our
19 phase two outreach.

20 Drinking water, D-. The drinking
21 water system has an annual shortfall of at
22 least \$11 billion to replace aging facilities
23 that are near the end of their useful life and
24 to comply with existing and future water
25 regulations.

1 This doesn't even account for the
2 growing demand for drinking water in large
3 parts of the country.

4 Energy, the only grade that went up
5 from a D to a D+. Public and government
6 opposition and difficulty in the permitting
7 process is restricting much needed
8 modernization.

9 We saw a little bit of that with the
10 blackout a couple years ago. Stay tuned.
11 There's more of that to come if there's not a
12 lot of investment in that area.

13 Hazardous waste stayed at a D.
14 Federal funding for Superfund clean-up for the
15 worst toxic waste sites has declined steadily,
16 dropping to 1.08 billion in 2008, the lowest
17 level since 1986.

18 The EPA estimates it will take \$200
19 billion invested over the next 30 years to
20 clean up the nation's most contaminated
21 sites.

22 The redevelopment of Brownfield sites
23 over the past five years has generated 191,338
24 new jobs and \$408 million annually in extra
25 revenue for localities. In 2008 there were

1 188 U.S. cities with Brownfield sites waiting
2 for clean-up and redevelopment.

3 And, again, that's a great economic
4 stimulus potential moving forward.

5 Inland waterways, D-. Moving trucks
6 on a waterway saves energy and reduces road
7 construction by taking trucks off the road.

8 The average age of federally owned or
9 operated locks is 60 years. Well past their
10 planned design life of 50 years. The cost to
11 replace the present system of locks is
12 estimated at more than a \$125 billion.

13 Levies, D-. Levies was not a
14 category in 2005 because in 2005 we were prior
15 to the Katrina disaster and we didn't
16 understand about how vulnerable we really
17 were.

18 Eighty-five percent of the nation's
19 estimated a hundred thousand miles of levies
20 are locally owned and maintained. The
21 reliability of these levies is mostly
22 unknown.

23 They're more than 50 years old and
24 were basically built to protect crops from
25 flooding. With the increase in development

1 behind most of these levies, the risk to
2 public health and safety is -- is getting to
3 be a very large risk.

4 The estimates on these levies is
5 roughly a hundred billion dollars.

6 Parks and recreations stayed at a
7 C-. Parks, beaches, and recreational
8 facilities contribute \$730 billion a year to
9 the U.S. economy, supporting six-and-a-half
10 million jobs, contribute to cleaner air,
11 water, and higher property values.

12 While there's been significant
13 investments to the National Park Service for
14 its upcoming centennial, the agency's
15 facilities are -- still face a \$7 billion
16 maintenance backlog. And that's --this was
17 based just on the federal data because the
18 state data is not consistent across the
19 states.

20 Rail, C-. A freight train is three
21 times as fuel efficient as a truck and
22 traveling by passenger rail uses 20 percent
23 less energy per mile than traveling by a car.

24 Freight and rail generally share this
25 same network and significant potential

1 increase in passenger rail demand will add to
2 freight rail capacity issues.

3 There's a lot of discussion about the
4 double decking across Pennsylvania that CSX is
5 looking at. Those are very real possibilities
6 we have to look at moving forward.

7 Roads, the core of what we're talking
8 about today, D- from a D. Americans spend
9 \$4.2 billion a year stuck in traffic at a cost
10 of -- to the economy of \$78.2 billion or \$710
11 per motorist.

12 Added to that, poor conditions cost
13 motorists \$67 billion a year in repairs and
14 operating costs. That's about \$630 per
15 motorist.

16 I'm an engineer. I -- I do math for
17 a living. That's \$1340 dollars a year per
18 motorist.

19 ASCE's policy for the new bill, for
20 the new transportation and surface
21 reauthorization, is looking at a 20 cent per
22 gallon gas tax increase along with a whole lot
23 of other things.

24 But just looking at that piece, if
25 you look at an average 30 miles per gallon and

1 average 12,000 miles a vehicle per year, 20
2 cents a gallon is \$800 that would have cost a
3 motorist over the year.

4 If you look at that 1340 that they
5 spend on car repairs because of bad
6 conditions, that's a \$540 savings once those
7 improvements are made.

8 ASCE is looking at a balanced
9 approach, talking about increased funding and
10 the gas tax, increasing use of public/private
11 partnerships, infrastructure banks, working
12 toward the technology to use vehicle miles
13 traveled in the future, but the technology is
14 not ready at this point for wide scale
15 deployment, and using more user fee approaches
16 and toll -- tollways.

17 Schools stayed a D. Spending on the
18 nation's schools grew from 17 billion in 1998
19 to a peak of 29 billion in 2004. By 2007
20 spending -- spending fell to 20.28 billion.

21 There's no comprehensive
22 authoritative data on the condition currently
23 of America's school buildings because it
24 hasn't been collected in more than a decade.

25 Solid waste stays at a C+. In 2007

1 the U.S. produced 254 billion tons of solid
2 waste. More than a third of that was recycled
3 or recovered representing a seven percent
4 increase over 2000.

5 Despite that success, the increasing
6 volume of electronic waste and the lack of
7 uniform regulations for disposal creates the
8 potential for very high levels of hazardous
9 materials and heavy metals in the nation's
10 landfills, posing a new public health and
11 safety threat.

12 Transit, D, and it was a D+. Transit
13 increased 25 percent between 1995 and 2005.
14 Faster than any other mode of transportation.

15 Half of America's households do not
16 have access to bus or rail transit, and only
17 25 percent have what they consider to be a
18 good option. The Federal Transit
19 Administration estimated 15.8 billion is
20 needed annually to maintain current conditions
21 and 21.6 to improve to good conditions,

22 Wastewater, D-, from a D-. Aging
23 systems discharge billions of gallons of
24 untreated wastewater into U.S. surface
25 waters.

1 The EPA estimates that the nation
2 must invest more than \$390 billion over the
3 next 20 years to update or replace existing
4 sewers, to build new ones, and to meet new
5 demands.

6 On the stimulus bill, the American
7 Recovery and Reinvestment Act, the House bill
8 passed the 28th and I know both previous
9 speakers talked a little about that. The
10 Senate as we speak is debating the bill, and I
11 have information that's probably an hour old
12 of what's going on on the floor.

13 I think the President's plan to
14 create millions of dollars of jobs over the
15 next two years is at the heart of the recovery
16 plan with infrastructure, but what it is is a
17 good start. It's not the end game.

18 The benefits of investing in
19 infrastructure are both short term and long.
20 It creates an immediate job to construct the
21 infrastructure and to serve those workers and
22 contributes to long-term growth to improve --
23 improve flow of commerce and travel,
24 redevelopment and public safety.

25 We have numbers listed as they are in

1 the -- in the two bills. On Tuesday there was
2 a Murray-Feinstein amendment that was \$25
3 billion to actually increase the money for
4 roads, bridges, and transit. That was
5 basically defeated on a procedural vote. That
6 will come back on the floor in another
7 amendment today.

8 There is a Boxer-Inhofe amendment
9 today for 50 billion in stimulus funds that
10 are not used in the first year for
11 transportation and -- \$50 billion of the
12 overall package that's not used in the first
13 year, to take that money and reinvest it in
14 roads, bridges, and water.

15 There is an amendment for 4.5 billion
16 to increase Army Corps and levy improvements.
17 There's an amendment to strike some of the
18 set-asides on the innovative projects, to have
19 them go back to formula of what the states are
20 getting.

21 And there's also an amendment to
22 shorten time frames under NEPA that's being
23 debated today to get projects out on the
24 street and so that they don't sit on a
25 regulator's desk.

1 We have testified in front of
2 committees and working with partners such as
3 ARTBA in Washington, and we feel we have
4 principles for investment relative to the
5 infrastructure we're hoping will -- will work
6 their way in project selection.

7 It's criteria for decision-makers
8 when you're selecting those projects, we want
9 not just the immediate need and benefit of
10 creating jobs, but there's got to be secondary
11 benefits.

12 We need ways to ensure lasting
13 success, focus first on ongoing maintenance
14 issues, promote health and safety and
15 environmental benefits.

16 There's an important inclusion,
17 accountability. ASCE recommends implementing
18 an oversight panel that ensures the intended
19 goals of the program are being met.

20 On February 3rd, President Obama
21 announced a creation of
22 www.recovery.gov, that -- a new website that
23 will track progress on those projects.

24 We have a grassroots program that
25 we're looking at to get our members involved

1 and actively involved in -- in pushing both
2 for the stimulus and for solutions moving
3 forward.

4 That's it for my prepared remarks. I
5 was kind of listening to some of the questions
6 beforehand and so I thought I'd chime in on my
7 perspective on some of that and let -- then
8 let it open to questions.

9 First of all, some of the discussion
10 on public/private partnerships. At the height
11 of the meltdown last year there was a lot of
12 question about what the future of those would
13 be, and there was a period of time there that
14 there was a whole lot of collective
15 breathholding on what that meant.

16 Since that time there has been --
17 Midway Airport has gone through in Chicago as
18 a public/private partnership, and the
19 percentage of private equity is much higher
20 than it was anticipated. There is a lot less
21 bank notes and bonds involved than typically
22 are.

23 They used to be about a 50/50 split
24 or 30/40 private equity -- 30/40 percent
25 private equity and the rest was a whole bunch

1 of complicated mechanisms. It's now pushing
2 toward 70 to 80 percent private equity and
3 the -- the smaller amount being in -- in bank
4 notes and bonds.

5 The I-595 concession that FDOT put
6 out was signed by the concessionaire last
7 week, which is a connection near the Miami
8 Airport, and that is waiting for FDOT
9 signature as we speak. So that is moving
10 forward.

11 A comment on the MPO funding. I -- I
12 was a commissioner of public works for Erie
13 County in western New York for five years, and
14 I'm a big proponent for having some local
15 money as well, because I believe that the
16 locals can get work out and they have an awful
17 lot of issues themselves.

18 I think the -- the MPO provision
19 means that you have all your local partners at
20 the table. Those MPO's bring all the local
21 partners together, and they have to come to a
22 consensus on which projects to fund. So as
23 long as that table feels it's an important
24 project, it's probably a really locally
25 important project.

1 So I think that that project
2 selection staying with -- whether it be
3 PennDOT and the expertise you have in the
4 department or with the MPO's where you're
5 getting local collaboration, in both cases I
6 think they're going to give you their biggest
7 bang for the buck.

8 A comment on the earmarking. My
9 personal observation on -- on some of the
10 projects I've tracked over the last three or
11 four bills in earmarking.

12 Earmarking tends to put an estimate
13 on the back of an envelope to be able to put a
14 project in the system, and a lot of that money
15 is being not obligated because those projects
16 are underfunded and some money has to come out
17 of some other project to be able to fully fund
18 that project as it lists in the bill.

19 So that's been an ongoing issue. And
20 it creates all kinds of reprogramming issues
21 for DOTs across the country because there may
22 be -- you know, there's some project that it's
23 maybe 50 or 60 or 70 percent of what you
24 really need in today's dollars and yet you
25 can't change it because the description is

1 exactly what it is in the legislation as far
2 as where it starts, where it ends, location,
3 what you're doing.

4 So I think that's problematic. And I
5 think that -- that I think there's going to be
6 pressure to do a lot less of that in the
7 future simply because you can't put it out the
8 door.

9 Other questions?

10 CHAIRMAN MARKOSEK: Okay. Thank you
11 very much.

12 Well, first of all, let me point out,
13 having -- while you were making your
14 testimony, I was looking at your graphics
15 here, it's just -- your folks need to be
16 congratulated. I really thought this was very
17 visual --

18 MS. LEHMAN: Thank you.

19 CHAIRMAN MARKOSEK: -- your handout
20 here, your pamphlet. It was very -- it was a
21 very good way to do this.

22 And it's a very sobering pamphlet in
23 a lot of ways and, of course, we'd point out
24 that the cost is 2.2 trillion over time.

25 The one page, the five key solutions,

1 reading through them, I was sort of trying to
2 interpret perhaps some of the things here.
3 Like, for example, with the increase it says
4 federal leadership and infrastructure --
5 increase federal leadership and
6 infrastructure. Is that a euphemism for
7 something else? Does that mean if the Feds
8 could pass a gas tax or a --

9 MS. LEHMAN: It's get -- we know we
10 have a problem. Now we need money.

11 CHAIRMAN MARKOSEK: Correct.

12 MS. LEHMAN: We need to put the money
13 where our mouth is. That's been the problem
14 over the last, probably, 30 years, is that
15 it's just not been funded at the level that it
16 needs to be from all levels.

17 CHAIRMAN MARKOSEK: Does ACE -- ASCE
18 have specifics on these because these
19 solutions are somewhat general?

20 MS. LEHMAN: Yes. There are
21 specifics that are coming on the website, like
22 I said, as we speak. The website is in here.

23 We do have a policy on transportation
24 reauthorization which I -- which I alluded
25 to. One of the specifics is a 20 per -- cents

1 a gallon gas tax.

2 CHAIRMAN MARKOSEK: Okay.

3 MS. LEHMAN: It's expanding P3s.
4 It's using more toll roads. It's the whole --
5 we need every solution that is out there
6 because the numbers are huge.

7 CHAIRMAN MARKOSEK: The -- when you
8 mentioned the toll roads, what's your sense if
9 you even -- you don't even have to really
10 speculate, but relative -- this would be more
11 not so much for the stimulus but for the
12 reauthorization, if we get to that. The feds
13 may look at allowing more tolling on
14 interstates as opposed to the current pilot
15 situation that's there now.

16 MS. LEHMAN: I believe that's being
17 discussed at a much higher level than it has
18 been in the past.

19 You know, again, I think we're
20 looking at sobering numbers, and you have to
21 be able to use every tool in the toolbox to
22 solve the problem. The more you narrow the
23 scope, the more something else has to go up.

24 So if you continue on pilots for the
25 next five years, the gas tax is going to have

1 to be higher to get to where you need to be.
2 And so you've got to look at every tool in the
3 toolbox.

4 CHAIRMAN MARKOSEK: Maybe I'll ask
5 you the same question as the previous
6 gentleman. Just -- you know, again, you know,
7 I don't want to put you on the spot, but just
8 asking not necessarily for your opinion but
9 your feeling as to what would happen or what
10 you think may happen relative to an increase
11 in the gas tax in Washington.

12 Is there -- is there better than a
13 50/50 shot? Is it something that no way
14 that's ever going to happen again, for you
15 know, for political reasons?

16 MS. LEHMAN: I think there's
17 political reasons, but I think if you look --
18 as -- as -- when I was an appointed official,
19 as my boss used to tell me, a crisis is a
20 terrible thing to waste.

21 We're in a situation right now that
22 we have to make some choices; and how we move
23 forward, you know, a lot of what we saw as far
24 as the roaring of the economy in decades
25 previous was based on an infrastructure that

1 was sound.

2 It's hard to tell what happens, but,
3 you know, realistically if you'd have asked me
4 a year ago could we do a trillion dollar
5 stimulus package, I would have said there is
6 no way that it would even be brought to a
7 vote. You know, it would never come out of a
8 committee.

9 So I think we are at a point that
10 people are looking for some solutions, and the
11 solution -- the -- our ability not to do
12 something is starting to outweigh the -- the
13 price of not doing anything is getting to be
14 so large that I almost think that we're at a
15 point that we might be able to do something
16 this year.

17 CHAIRMAN MARKOSEK: And this is the
18 only other question I had. The grades for the
19 specific issues, do you have that broken down
20 per states?

21 MS. LEHMAN: It will be by the end of
22 March. Originally -- I mean we started this
23 committee about a year and a half ago, and,
24 you know, researching through mountains of
25 material and, again, there was a decision made

1 in the beginning of January when there was
2 really some impetus on the stimulus that we
3 needed to get the overall information. This
4 will be broken down by state.

5 There is actually some historical
6 information for 2005 broken down by state on
7 the website relative to specific issues. And
8 we want to have specific pictures and projects
9 and, you know, state by state so people -- it
10 feels local. That's how we're going to sell
11 this, if it feels local.

12 CHAIRMAN MARKOSEK: All right.

13 Representative Siptroth.

14 REPRESENTATIVE SIPTROTH: Thank you,
15 Mr. Chairman.

16 Thank you, Ms. Lehman. I have one
17 question.

18 When you had stated on Page 1 of your
19 handout, the slide in the right-hand corner at
20 the bottom, that \$2.2 trillion was needed in
21 the next five years to bring us to the level
22 of good, what is good? A? B? C? D? E?
23 What is good?

24 MS. LEHMAN: I don't know that it's
25 going to be numerical. What good is based on

1 is whatever good is considered in the rating
2 system.

3 So it's -- it's a function of a
4 bridge being in a state of good repair
5 which -- which is a different grade per se
6 than a roadway, because roadways are based on
7 a scale of ten and bridges are based on a
8 scale of seven, based on how they're graded.
9 Levies have a different grading system.

10 So it's basically not improving, not
11 adding more capacity, but basically putting
12 them so that they are at a point that they
13 still have a functional, useful life of 20 to
14 30 to 50 years in front of them, which is what
15 the design life is at the beginning or a full
16 rehab of an asset.

17 So it's different. That's the
18 problem. All the different infrastructures
19 are -- are graded differently based on how
20 they come up through.

21 REPRESENTATIVE SIPTROTH: In that
22 scenario, if a bridge is graded deficient and
23 the change is to better it to take it off of
24 the deficiency list --

25 MS. LEHMAN: Right.

1 REPRESENTATIVE SIPTROTH: -- then it
2 would be good?

3 MS. LEHMAN: Yes.

4 REPRESENTATIVE SIPTROTH: Okay. I
5 understand. Thank you.

6 MS. LEHMAN: And, again, I think
7 there's a lot of those details that are going
8 to be coming out on the website because
9 there's a lot of specific questions people
10 want answers on and it is very complicated.
11 It's complicated for the professionals in the
12 business.

13 REPRESENTATIVE SIPTROTH: Thank you.

14 CHAIRMAN MARKOSEK: Executive
15 Director Bugaile.

16 EXECUTIVE DIRECTOR BUGAILE: I just
17 wanted to ask. Really this is a great
18 reporting and we appreciate the -- what you've
19 gone through to put it together. I mean it
20 really certainly is dramatic.

21 But what you know of the stimulus
22 that's being debated now, do you fear that
23 what you might get out of it is not some real
24 long-term improvements that would actually get
25 to the root of these things, problems? All

1 you're going to get perhaps is for maybe an
2 election year special pavings, where you get
3 these little -- so they could get as much
4 projects out the door as quick as possible,
5 they go and do these things that perhaps is
6 just Band-aiding over the difficult thing and
7 not really get to the root of what maybe we
8 did have.

9 MS. LEHMAN: That's obviously a very
10 large concern of ours. You know, again, if
11 you see a large -- if you see a large
12 investment of federal money in roads and
13 bridges, does that take the pressure off for
14 authorizing a federal bill this year?

15 Does that delay that process? Does
16 that delay making another hard decision?

17 That's -- that's something we're very
18 concerned about, and -- and that's why, you
19 know, the tag line is it's a good start. But
20 it's not the end-all.

21 And if you look at our gross domestic
22 product, before the slide, because I have no
23 idea what the percentage is now that we have
24 had this -- this volatility in the last six
25 months, the U.S. has been spending about 1.5

1 percent of our gross domestic product on
2 infrastructure over the last probably decade
3 or two.

4 Europe spends six to seven percent.
5 China and India spend eight to nine percent of
6 their gross domestic product.

7 There's a correlation, and even more
8 so now that we don't have warehouse things.
9 Everything is just in time, and it needs to
10 get to where it needs to go, and we're not
11 paying attention to that.

12 So it's definitely a concern. So
13 we're not going to give up.

14 EXECUTIVE DIRECTOR BUGAILE: Part of
15 our problem here in this state is, and I'm
16 sure it is nationwide, is project delivery.
17 You know, it takes so long to get a project
18 done and then you tend to want to just patch
19 something instead of trying to do the whole --

20 MS. LEHMAN: Do the right thing.

21 EXECUTIVE DIRECTOR BUGAILE: --
22 project and really get to the root of the
23 problem.

24 MS. LEHMAN: And I think that's one
25 of the reasons why we're looking at some of

1 the innovative methodologies. You know,
2 things like design/build, public/private
3 partnerships, doing advance construction,
4 doing programmatic as far as doing a whole
5 series of small bridges.

6 When I was at county, I had about
7 1200 centerline miles under my jurisdiction,
8 about 700 culverts. We put out a \$50 million
9 program in one year to replace a lot of
10 culverts. We pre-sized them, bought them off
11 the shelf, and, you know, basically if it
12 doesn't fit here, I got another place I can
13 put it.

14 So basically streamlined a lot of the
15 process to be able to get a lot done in a
16 short period of time. If there's a will,
17 there's a way.

18 CHAIRMAN MARKOSEK: Okay. Thank
19 you. I -- just one last comment.

20 I'm happy to see you had inland
21 waterways here. We have a -- a serious lock
22 problem --

23 MS. LEHMAN: Yes.

24 CHAIRMAN MARKOSEK: -- in Pittsburgh,
25 in the Pittsburgh area.

1 MS. LEHMAN: Uh-huh.

2 CHAIRMAN MARKOSEK: And just like
3 everything else, you know, it takes a lot of
4 money. Those are big projects. It's very
5 important in our climate, too, so I'm glad to
6 see you mention that.

7 MS. LEHMAN: Great.

8 CHAIRMAN MARKOSEK: I want to thank
9 you, again, for being here, all the folks that
10 testified here. The members and I appreciate
11 it. We have learned a lot. And the meeting
12 is adjourned.

13 MS. LEHMAN: Thank you for having
14 me.

15 (The hearing was adjourned at
16 11:03 a.m.)
