

COMMONWEALTH OF PENNSYLVANIA
HOUSE OF REPRESENTATIVES

ENVIRONMENTAL RESOURCES & ENERGY COMMITTEE
PUBLIC HEARING

STATE CAPITOL
HARRISBURG, PA

RYAN OFFICE BUILDING
ROOM 205

WEDNESDAY, FEBRUARY 5, 2020
9:01 A.M.

PRESENTATION ON
REGIONAL GREENHOUSE GAS INITIATIVE (RGGI)
AND HB 2025 (STRUZZI) CARBON TAX

BEFORE:

HONORABLE DARYL D. METCALFE, MAJORITY CHAIRMAN
HONORABLE MARTIN T. CAUSER
HONORABLE CRIS DUSH
HONORABLE JONATHAN FRITZ
HONORABLE RYAN E. MACKENZIE
HONORABLE TIMOTHY J. O'NEAL
HONORABLE JASON ORTITAY
HONORABLE KATHY L. RAPP
HONORABLE TOMMY SANKEY
HONORABLE PAUL SCHEMEL
HONORABLE RYAN WARNER
HONORABLE DAVID H. ZIMMERMAN

* * * * *

Debra B. Miller

BEFORE (continued):

HONORABLE GREG VITALI, DEMOCRATIC CHAIRMAN
HONORABLE CAROLYN T. COMITTA
HONORABLE MARY JO DALEY
HONORABLE ELIZABETH FIEDLER
HONORABLE MARYLOUISE ISAACSON
HONORABLE LEANNE KRUEGER
HONORABLE DANIELLE FRIEL OTTEN
HONORABLE PAM SNYDER
HONORABLE PERRY S. WARREN
HONORABLE MIKE ZABEL

ALSO IN ATTENDANCE:

HONORABLE JAMES B. STRUZZI II

COMMITTEE STAFF PRESENT:

GLENDON KING
MAJORITY EXECUTIVE DIRECTOR
GRIFFIN CARUSO
MAJORITY RESEARCH ANALYST
ALEX SLOAD
MAJORITY RESEARCH ANALYST
PAM NEUGARD
MAJORITY ADMINISTRATIVE ASSISTANT

RICHARD FOX
DEMOCRATIC EXECUTIVE DIRECTOR

I N D E X

TESTIFIERS

P R O C E E D I N G S

* * *

MAJORITY CHAIRMAN METCALFE: Hello, everyone.
This meeting of the House Environmental Resources & Energy
Committee is called to order. Good morning.

If everybody could please rise, and before we
start, we'll ask Representative Sankey to lead us in the
Pledge, please.

(The Pledge of Allegiance was recited.)

MAJORITY CHAIRMAN METCALFE: Thank you,
Representative Sankey.

Before we get started, if I could ask our
Member-Secretary, Representative Dush, to call the roll,
please, for our hearing this morning.

(Roll call was taken.)

REPRESENTATIVE DUSH: We have a quorum,
Mr. Chairman.

MAJORITY CHAIRMAN METCALFE: Thank you,
Representative Dush.

This morning's public hearing is on the
Regional Greenhouse Gas Initiative and especially related

1 to House Bill 2025, authored and introduced by
2 Representative Jim Struzzi. And he is with us this
3 morning, and we would welcome Representative Struzzi to
4 make a few comments about the introduction of his bill, and
5 then he would be invited to take a seat behind the table
6 and join the Committee as we consider the testimony this
7 morning.

8 REPRESENTATIVE STRUZZI: All right.

9 Thank you, Mr. Chairman, and good morning to all
10 the Members of the ERE Committee.

11 I'm honored to be here today to discuss
12 House Bill 2025. This bill was written in direct response
13 to the Governor's announcement in October of last year to
14 enter into the Regional Greenhouse Gas Initiative.

15 Essentially by doing that, the Governor
16 circumvented the legislative process. My bill, which is a
17 bipartisan bill coauthored with Representative Snyder and
18 Representative Oberlander, basically says that before any
19 attempt to enter into RGGI is undertaken, it needs to go
20 through the Legislature first.

21 That essentially is what the bill does. It
22 outlines the process for doing that. I am not going to
23 talk about the pros and cons of entering RGGI. I know that
24 there are plenty of people on the agenda today who will do
25 that. I have said in previous testimony where I stand on

1 RGGI, and I'm trying very hard to not allow my emotions or
2 my bias into this because we're talking about the bill
3 today.

4 I represent Indiana County. We have two of the
5 largest coal-fired electric generation stations in
6 Pennsylvania. I represent hardworking Pennsylvanians who
7 will suffer dearly if RGGI is implemented. But I'm not
8 going to talk about that today. I am talking about this
9 bill, and I know that there are plenty of people behind me
10 who will talk for or against RGGI's implementation.

11 But on its merits, the bill simply says that any
12 attempt to enter into the Regional Greenhouse Gas
13 Initiative must go through the Legislature first. That is
14 the bill itself, House Bill 2025.

15 So I thank you for the opportunity to speak
16 today. I look forward to hearing the testimony, and I will
17 answer any questions that you have.

18 Thank you.

19 MAJORITY CHAIRMAN METCALFE: Thank you,
20 Representative Struzzi.

21 We won't be asking you any questions today, but
22 you're welcome to join us and take a seat. We'll bring up
23 our first testifier. But thank you for joining us today.

24 REPRESENTATIVE STRUZZI: Thank you very much.

25 MAJORITY CHAIRMAN METCALFE: Our first presenter

1 today, testifier today, will be Mr. David T. Stevenson,
2 Director for the Center for Energy & Environmental Policy,
3 the Caesar Rodney Institute. Thank you for joining us,
4 sir. Thanks for making the trip up from Delaware. We
5 appreciate it.

6 And today's schedule is packed during this
7 hearing, with a lot of folks that will be presenting to the
8 Committee, testifying to the Committee. So we expect that
9 we'll have some time for Q and A. We'll be taking a lot of
10 information today. If there's time for Q and A, then of
11 course that Q and A will be very limited.

12 So if a Member wants to ask a question and they
13 don't get time to, we'll have you on the list for the next
14 round of questions with the next testifier as we have time
15 today. But we're going to try and get in as much
16 information as possible to the Committee before session at
17 11 today.

18 So with that, sir, you can begin. Thank you for
19 joining us.

20 MR. STEVENSON: Yes. Thank you for inviting me,
21 Mr. Chairman and honored Committee Members. I'm really
22 happy to be here.

23 You should be asking yourself, why is this guy
24 here? He's an economist and a policy analyst from
25 Delaware. What the heck am I doing here?

1 Well, Caesar Rodney Institute is a sister
2 organization to the Commonwealth Foundation, which does
3 just a great job in Pennsylvania, but they are not an
4 expert on RGGI. I have been -- Delaware is a RGGI State.
5 I have been studying RGGI for the last 9 years, so I have
6 got a little background on that.

7 There have been five studies done on the
8 decade-old RGGI program. Only two of them have tried to
9 parse out what RGGI did compared to, for example, what
10 low-cost natural gas did by switching power plants from
11 coal to natural gas, EPA regulations that closed 23 percent
12 of the coal-burning plants in the country, and Renewable
13 Portfolio Standards that had us building more wind and
14 solar power.

15 Of the two studies, one was the Congressional
16 Research Center, which is the research arm of the
17 U.S. Congress, and the other was my peer-reviewed study
18 published last year in the Cato Journal. By the way, peer
19 review is quite the lengthy process.

20 Both of those studies, the Congressional Research
21 study and my study, both came to the same conclusion, and
22 it was an unexpected result, is that RGGI has added nothing
23 to the reduction of carbon dioxide in the nine RGGI States
24 that continued in that program for the entire time.
25 New Jersey was in and dropped out. So again, it has

1 contributed nothing.

2 I will get into the testimony. I did want to say
3 a good friend of mine, Delaware State Senator Minority
4 Leader Gerald Hocker, was the Energy Commission Chairman in
5 2007 when Delaware got into RGGI, and I asked him why they
6 voted for it, and his answer was, there was not a single
7 person that testified against it at that time. So I'm glad
8 to say that in Pennsylvania today, that's not going to
9 happen.

10 So what is RGGI? RGGI is now 10 Northeast
11 States, again, that have joined together to require power
12 plants to purchase allowances to emit each ton of carbon
13 dioxide. It started out with a 10-percent reduction
14 target, it was raised in 2013 to a 53-percent reduction
15 target, and in 2019 to a 65-percent reduction target. The
16 allowances have to be turned in by the electric generators
17 to prove they have bought them.

18 The ultimate goal is zero emissions, by the way.
19 Don't think you're just doing 30 percent, which is the
20 target that has been suggested for Pennsylvania.

21 A key factor and very relevant to the bill you
22 are considering today is, all 10 of those States not only
23 passed it legislatively but passed it, if there was a
24 requirement, for example, Delaware, because it was a
25 revenue bill, needed a three-fifths majority. And every

1 State that joined RGGI did this legislatively, and if they
2 needed enough for revenue, they passed it by a revenue
3 majority. And what you are doing here today is exactly
4 right.

5 Did RGGI work? I have already told you no. One
6 of the things we looked at was how the RGGI States changed
7 from coal production to natural gas production compared to
8 non-RGGI States. Now, you have to be careful when you're
9 comparing. A lot of things have changed, so we had
10 deregulation of supply. We had the Renewable Portfolio
11 Standards. We had the shale gas revolution. You have to
12 be careful when you're comparing States.

13 So what I did, I compared five States that
14 deregulated that had an RPS standard but did not have RGGI
15 so that you can compare apples to apples. And in comparing
16 that, both sets of States wound up reducing coal generation
17 by 16 percent and increasing natural gas production by
18 about 10 percent. As you know, natural gas has about half
19 the emissions of coal.

20 So I think it's helpful for you to think about
21 what Pennsylvania has already done about carbon dioxide
22 reduction. First of all, and this is using the U.S. Energy
23 Information data. Per capita, emissions from Pennsylvania
24 electric power plants dropped 40 percent from 2005 levels
25 and so did the RGGI States, exactly the same result. On a

1 per capita basis, a 40-percent reduction in electric
2 generation.

3 In total generation, Pennsylvania has dropped
4 72 million tons since 2005 to 2018. That's a 25-percent
5 reduction. The U.S. total went down 14 percent. The rest
6 of the developed world only dropped 5 percent, and the
7 developing world has gone up at least 45 percent.

8 I know the Governor joined the Climate Alliance
9 and has a target of a 26-percent reduction by 2025. The
10 2019 data is not out, but based on the trends, you probably
11 met that goal in 2019.

12 Additionally, in Pennsylvania, natural gas
13 production rose 6 trillion cubic feet, and of course it got
14 sold all over the country, but in doing that, it reduced
15 carbon dioxide emissions nationally by 308 million tons.
16 To put that in perspective, Pennsylvania's current
17 emissions are about 215 million tons.

18 Additionally, half the State is forest. That's
19 absorbing anywhere from 15 to 38 million tons just from the
20 fact that you are so heavily forested. Pennsylvania
21 doesn't owe anybody an apology about the carbon dioxide
22 they are emitting at this point. They have done more for
23 this country to reduce carbon dioxide than any other State.
24 Thank you for that.

25 So what is RGGI going to cost if you get into it,

1 and this is using RGGI's own forecast of where the
2 allowance cost is going. You are probably looking at a
3 billion dollars a year in allowance costs. It will grow
4 over the years, but the average over the next 10 years will
5 be about a billion dollars a year.

6 In addition, if RGGI works and you reduce coal
7 production, you're going to wind up losing about
8 400 million dollars' worth of coal production that will
9 just shut down. A quarter of the coal production will go
10 away.

11 In addition, Pennsylvania is exporting -- you
12 produce 2 $\frac{1}{4}$ times more electricity than you need, so you
13 export it. You would lose half a billion dollars a year in
14 electric sales to other States, which primarily are all
15 these RGGI States that aren't generating enough power
16 anymore.

17 In addition to that, when you have electric price
18 increases, and I'm projecting that the price will increase
19 about 7 percent because of RGGI, you lose energy-intensive
20 businesses. Delaware has lost almost half of its
21 energy-intensive businesses.

22 That loss, and if it follows in Pennsylvania,
23 would be \$3 $\frac{1}{2}$ billion a year. Add all that up, you're
24 looking at \$5 $\frac{1}{2}$ billion a year of economic impact, and if
25 you divide that by the number of households in the State,

1 it's \$1,150 per household. If you go to zero emissions, by
2 the way, that 5 ½ billion, add another 10 ½ billion to
3 that.

4 So one question always is, did RGGI increase
5 energy efficiency, because they were supposed to spend the
6 revenue mainly on energy efficiency projects. First of
7 all, RGGI itself says they only spent 27 percent of the
8 revenue on energy efficiency. Secondly, it's a problem
9 verifying energy efficiency programs. They are usually run
10 by utilities overseen by the government, and they wind up
11 taking what I would call the easy path, but they do no
12 verification.

13 So, for example, one of the best ways to reduce,
14 to get energy efficiency is you put LED lightbulbs in. So
15 when they were 10 bucks apiece and you got a coupon, that
16 was worthwhile. Today, they are 2 bucks apiece, but the
17 energy efficiency programs are still trying to give coupons
18 for LED lightbulbs. The payback is 3 months on buying an
19 LED versus a halogen. Go to Walmart: All the halogen
20 bulbs are on the bottom shelf and you got three shelves of
21 LEDs. You don't need any more of that, but that's where
22 the money is still going.

23 The second thing was refrigerators.
24 Refrigerators are one of the most energy-saving devices you
25 can buy. But a lot of programs give coupons for that, for

1 buying -- and what happens is, people go in and they buy a
2 more expensive refrigerator. They buy a bigger one; they
3 buy them with extra features, and all of that actually
4 winds up using more electricity than if they hadn't given
5 anybody the coupons.

6 So the real measure of how this is going, we
7 looked at the comparison States versus RGGI. There's a
8 factor called energy intensity, which measures the entire
9 State, and the RGGI States were improved by 9.6 percent,
10 but the non-RGGI States did 11.5 percent.

11 Another question is, did electricity prices rise
12 more slowly in RGGI States? There is one study that says
13 they did. But if you look at the actual comparison States
14 versus RGGI, RGGI States went up 4.6 percent in price over
15 the 2007 to 2015 period, non-RGGI States only went up about
16 half of that amount.

17 Because of time, maybe some things will come up
18 in the question and answer. I won't go too much further
19 here.

20 So the other big question is, did economies grow
21 faster in RGGI States from the investment of RGGI funds,
22 and the first thing I would do is caution you to believe
23 that RGGI had any impact on GDP. The allowances only
24 amounted to one-tenth of 1 percent of GDP. It's just not
25 going to have that big of an effect. But if you look at

1 the comparison States, comparison States grew by
2 17.2 percent; RGGI States grew by 7.2 percent over that
3 period of tests. One of the big factors is that goods
4 production in the RGGI States dropped 12 percent while they
5 grew by 20 percent in the comparison States.

6 So just to sum up, if you want to spend
7 \$5 ½ billion a year, 1,150 per household, with no
8 significant reduction in emissions, by all means, join
9 RGGI, but I don't see this as being a good idea for
10 Pennsylvania. And I think, you know, Virginia's Governor
11 also wants to try to do RGGI without a legislative support,
12 and that is absolutely the wrong direction to go.

13 Thank you. I'm happy to answer questions.

14 MAJORITY CHAIRMAN METCALFE: Thank you, sir.

15 Members, any questions?

16 Representative Vitali.

17 MINORITY CHAIRMAN VITALI: Yeah. Thank you.

18 This is kind of a two-part question. I'm going
19 to first read you a statement. I want to know if you agree
20 with it or not. This is from the President of Exelon,
21 Chris Crane:

22 "...time is running out to return to a safe and
23 stable global climate. The world's top scientists give us
24 a vanishingly short..." amount "of time to right the ship
25 before climate change pushes Earth past its ecological

1 tipping point. While the debate drags on in Washington,
2 D.C., make no mistake: our planet has already measurably
3 warmed.”

4 And the other thing, the statement I want to make
5 and then ask you to respond is, the Intergovernmental
6 Panel on Climate Change tells us we need to be carbon
7 neutral by midcentury to avoid the worst effects of climate
8 change, and clearly, you can't be carbon neutral with
9 natural gas.

10 So my question to you is this: First of all, do
11 you agree with those statements and in effect acknowledge
12 the severity of climate change, and if the answer to that
13 question is yes, what proposals have you already put forth
14 to get us to carbon neutrality by 2050?

15 MR. STEVENSON: A fair question.

16 First of all, let me say that we are charged as
17 humankind to be good stewards of the earth, and reducing
18 carbon dioxide is part of that charge, in my belief.
19 Anything we can do to reduce it is key.

20 There are, the first problem with that statement
21 by the Chairman, or by the President, was that this is a
22 crisis situation and that the best scientists in the world
23 happen to say it's a crisis. There are very, very good
24 scientists on both sides of the equation. The best data,
25 global data, is from satellite data, which shows

1 temperatures have gone up about 1 degree centigrade so far.
2 It looks to be on track to go to 1 ½ degrees if we double
3 CO2.

4 So it is a certainty that CO2 is rising in the
5 atmosphere. We have gone from about 250 parts per billion
6 to 410, and we are going to continue to rise. That's a
7 certainty. Temperature rising is a high probability that
8 it's connected with that carbon dioxide, although not a
9 certainty. The fact that actual temperatures have not
10 risen compared to the models that the UN IPC uses, those
11 models are just clearly wrong. They are poorly done and
12 they're wrong.

13 This is not a crisis situation. We have the
14 ability to adapt, and we have the ability, best of all, to
15 use things that actually work. One of those things that
16 actually works is switching from coal to natural gas, which
17 the Energy Information agency just came out with their
18 2050 forecast, and they see a continuing switch from
19 natural gas, from coal to natural gas, which is good for
20 Pennsylvania overall.

21 So, yeah. So I agree with you that it's an
22 issue. I do not agree that it's a crisis. We could have
23 that discussion for a couple of hours, if you'd like, but
24 that's the short answer.

25 MAJORITY CHAIRMAN METCALFE: Other questions?

1 Representative Daley.

2 REPRESENTATIVE DALEY: Thank you, Mr. Chairman.

3 Mr. Stevenson, thank you for being here today.

4 I'm expecting a pretty short answer to this
5 question, because I'm just going to ask if you could
6 provide this Committee with where the Institute gets most
7 of its funding and who is on your Board of Directors.

8 MR. STEVENSON: We get most of our---

9 REPRESENTATIVE DALEY: And it would be probably
10 better if you could provide that to us by sending it in to
11 the Chairman and he would then distribute it, or both of
12 the Chairs.

13 MR. STEVENSON: We are a 501(c)(3). We do not
14 give out our donor information. I would be happy to give
15 you some general comments about our donors.

16 We are frequently accused of taking money from
17 the Koch Foundation. I can assure you I would happily take
18 a check from the Koch Foundation. They have never offered
19 one.

20 I have lost donors because I follow the data to
21 the truth. Donors do not influence my research.

22 REPRESENTATIVE DALEY: But you can provide us
23 with your records?

24 MR. STEVENSON: No; no. We do not, we do not
25 release.

1 If you recall, back in the 1950s, the State of
2 Alabama tried to get the NAACP's donors so that they could
3 abuse them, and the Supreme Court said that 501(c)(3)s do
4 not have to provide that information. We do not. We
5 maintain donor privacy. We get most of our donations from
6 about 650 people in Delaware.

7 REPRESENTATIVE DALEY: And is that available on
8 your---

9 MAJORITY CHAIRMAN METCALFE: We only have time
10 for one question.

11 MR. STEVENSON: We don't release it, and I won't
12 release it.

13 MAJORITY CHAIRMAN METCALFE: Thank you.

14 So, Mr. Stevenson, as we have been talking about
15 RGGI, and we have had the Secretary in talking to us about
16 RGGI, what's your response to those who claim that RGGI
17 States have reduced emissions at a greater rate than
18 non-RGGI States?

19 MR. STEVENSON: Actually, RGGI, Inc., doesn't
20 make that claim. The only research paper that has been
21 done on that is the Acadia Center study. The Acadia Center
22 study is very poorly done. I wrote two pages of a critique
23 on that. They missed it by a mile.

24 But one of the biggest reasons they did that,
25 what they said is, on a percentage basis, the RGGI States

1 reduced emissions more than other States, and that's a true
2 statement, but it's misleading.

3 If you reduce a million pounds of carbon dioxide
4 and you only started with 2 million pounds, you have
5 reduced 50 percent. And for historical reasons, the RGGI
6 States had a low amount of coal transmission compared to
7 the rest of the country. If you have 4 million tons of
8 emissions to start and you reduce by a million tons, you
9 have only reduced it 25 percent.

10 So using percentages is misleading. You want to
11 use the actual tonnage numbers, and when you do that, the
12 RGGI and non-RGGI States had the same level of emissions
13 reductions.

14 MAJORITY CHAIRMAN METCALFE: Thank you very much.
15 Thanks for joining us today.

16 MR. STEVENSON: Thank you.

17 MAJORITY CHAIRMAN METCALFE: We have a panel of
18 individuals that will be presenting next.

19 We have Mr. Sean Lane, Representative of Chief
20 Power, LLC; Mr. Vince Brisini, Director of Environmental
21 Affairs, Olympus Power, LLC; Mr. Paul Cameron, Business
22 Manager, International Brotherhood of Electrical Workers
23 459; Mr. Shawn Steffee, Executive Board Trustee/Business
24 Agent, Boilermakers Local 154; Mr. Donald Arena, President
25 of the South Central Pennsylvania Building Trades Council.

1 And thank you, sir, for bringing your chair back
2 up. We had chairs there and they got moved around, so
3 thanks for taking that initiative. We appreciate it. I
4 was just going to direct somebody to do that for you. I
5 appreciate it.

6 MR. STEFFEE: Sir, before we get started, I would
7 just like to, both the majority and minority, here's both
8 my sources and all that information.

9 MAJORITY CHAIRMAN METCALFE: Thank you. Thank
10 you.

11 Thank you. Thank you, Representative.

12 So whoever would like to start.

13 MR. BRISINI: I'll start.

14 I'm Vince Brisini. I'm the Director of
15 Environmental Affairs for Olympus Power. I would like to
16 thank the Chairman and the Committee for allowing me to
17 provide testimony today.

18 There is a slide deck, a blue slide deck, and you
19 can follow along with my presentation today, my testimony,
20 as I process it.

21 So if we go past the cover page, succinctly,
22 RGGI is a program that imposes artificial costs upon
23 carbon dioxide emissions from electric generating units to
24 price certain generation out of the wholesale markets.

25 The next slide.

1 While there are a number of other cap-and-trade
2 programs, RGGI is very different than those programs. A
3 big difference is that the vast majority of affected
4 sources are required to buy allowances in an auction. And
5 unlike sulfur dioxide and nitrogen oxides, the pollutants
6 typically regulated by cap-and-trade programs, there aren't
7 commercially available technologies to capture and store or
8 otherwise manage carbon dioxide. The significant control
9 of carbon dioxide can only be achieved by fuel switching,
10 reduced utilization, or retirement.

11 RGGI is designed to increase the price of
12 electricity from the affected units, while the other
13 cap-and-trade programs were designed to control the cost of
14 the emissions reductions and the price of electricity.

15 Next slide.

16 Coal-fired and certain fuels switched in older
17 natural gas-fired generation will be artificially
18 challenged to remain economically viable in the PJM market.
19 In the case of the coal-fired plants, they will be retired
20 as quickly as PJM provides approval.

21 The next slide.

22 Most RGGI States and Pennsylvania's generators
23 have reduced carbon dioxide emissions. Without
24 participation in RGGI, Pennsylvania's carbon dioxide
25 emissions have been reduced by 33.2 percent from 2005

1 emissions while at the same time maintaining its position
2 as the number-one exporter of electricity in the nation.
3 That 33.2 percent reduction surpasses the target set by
4 Governor Wolf, the Paris Accord, and even the vacated
5 Clean Power Plan well ahead of their respective schedules.

6 We know how these carbon dioxide reduction -- the
7 next slide. We know how these carbon dioxide reductions
8 have occurred in Pennsylvania. The reductions are due to
9 the retirement of coal and coal refuse-fired generation and
10 replacement by natural gas-fired generation.

11 Next slide.

12 We also know that most of the RGGI States now
13 import more electric power on a percentage basis than they
14 did prior to participation in RGGI. And those RGGI
15 participating States that aren't importing more electricity
16 in 2018 have carbon dioxide emissions that have either
17 increased above 2005 levels or they had a reduction that
18 is far less on a percentage basis than the reduction
19 achieved in Pennsylvania without Pennsylvania participation
20 in RGGI.

21 Next slide.

22 Pennsylvania isn't an island in PJM.
23 Consequently, we really don't know if Pennsylvania's
24 participation in RGGI will result in any regional carbon
25 dioxide reductions. That's because the lost Pennsylvania

1 generation will be replaced by generation in other PJM
2 States not participating in RGGI, and those generating
3 plants could be coal or coal refuse-fired or natural
4 gas-fired.

5 We also know that the Pennsylvania -- next slide.
6 We also know that the Pennsylvania lost generation won't be
7 replaced by renewables. Using land-based wind turbines for
8 analysis purposes because it's the most cost-effective
9 renewable electric generation, it would take about 3,300
10 wind turbines to replace the generation lost due to RGGI
11 participation. To put that number into context, there are
12 currently about 600 to 700 existing turbines in
13 Pennsylvania.

14 The failure of RGGI to achieve mass installation
15 of renewable electric generation is demonstrated by the
16 continuing legislative efforts by the RGGI States to force
17 more renewable generating sources. RGGI simply doesn't
18 provide that outcome.

19 Slide 11.

20 If the lost Pennsylvania generation is replaced
21 entirely by natural gas-fired generation, the maximum
22 tonnage of carbon dioxide reduction that would occur would
23 be about 19.8 million tons. That represents 1 percent of
24 the annual carbon dioxide emitted by the electric
25 generators in the United States.

1 For perspective -- slide 12. For perspective,
2 coal and coal refuse-fired electric generation in the
3 United States together represent only 12 ½ percent of the
4 global coal-fired electric generating facilities. If all
5 of the Pennsylvania coal-fired generation loss due to
6 participation in RGGI would be replaced entirely by natural
7 gas-fired generation located in Pennsylvania and all of the
8 existing Pennsylvania natural gas-fired generation were to
9 operate at the same level as occurred in 2018, then the
10 maximum amount of annual RGGI tax revenue for Pennsylvania
11 would be \$267 million. However, remember, RGGI States
12 generate less electricity, which means a more realistic
13 projection for Pennsylvania RGGI tax revenue is about
14 \$175 to \$200 million annually.

15 While there have been some reductions in the
16 average price of electricity in the RGGI States, there are
17 mostly increases to the residential prices of electricity.
18 Delaware and Maryland are the only RGGI participating
19 States with reductions in the residential price of
20 electricity as well as the average price of electricity,
21 and both are in the PJM territory and both have increased
22 the amount of electricity they import, primarily from
23 Pennsylvania.

24 So skip a slide, if you're going along. I had
25 one accidentally in there. So we go to slide 15.

1 So we know that Pennsylvania joining RGGI will
2 force the early retirement of the coal-fired electric
3 generating units in Pennsylvania. We know that it won't
4 cause a shift to renewable electric generation in
5 Pennsylvania. We know it will reduce the amount of
6 electricity generated and exported by Pennsylvania
7 generators. We know that it will result in lost
8 Pennsylvania coal-fired electric generation being replaced
9 by electric generation from other non-RGGI PJM States. We
10 know that the lost Pennsylvania coal-fired generation would
11 be replaced by natural gas or other coal or coal refuse
12 units either inside or outside of Pennsylvania. We know
13 that this will result in companies moving the development
14 of new natural gas-fired generating units to other non-RGGI
15 PJM States. And, joining RGGI will not result in CO2
16 emissions reductions that will affect local, regional, or
17 global climate. And, RGGI will only generate about \$175 to
18 \$200 million a year.

19 Thank you for allowing me to provide this
20 testimony today.

21 MAJORITY CHAIRMAN METCALFE: Thank you, sir.

22 We have Mr. Lane next, I believe.

23 MR. LANE: Yeah.

24 Thank you, Mr. Chairman and Members of the
25 Committee.

1 My name is Sean Lane. I am speaking here this
2 morning on behalf of Chief Power, and we're one of the
3 investors in the Keystone and Conemaugh projects.

4 Why are we here? I do have slides, by the way,
5 the green slides, if you wanted to follow along.

6 Why are we here? Is it due to a legislative
7 mandate, a carbon imperative, or just chasing tax dollars?
8 I would posit that none of these are sufficient reasons for
9 Pennsylvania to adopt RGGI.

10 The initiative released by AQTAC to the DEP is
11 regulatory in nature but without any really firm
12 legislative authority.

13 As to carbon emissions, Pennsylvania has already
14 outperformed all of the carbon metrics set for Pennsylvania
15 generation by President Obama's Clean Power Plan, by the
16 Paris Accords, and even Governor Wolf's own previously
17 established carbon goals. In fact, there is good reason,
18 as Mr. Brisini noted, to believe that carbon emissions and
19 other pollutants could even increase in the region if
20 Pennsylvania adopts RGGI, because our electricity
21 generation capacity will simply be replaced within PJM by
22 States such as Ohio and West Virginia.

23 Finally, we believe that RGGI supporters' tax
24 revenue estimates fail to embrace the inevitable plant
25 closures and are therefore overvaluing the significance of

1 RGGI revenue and, at the same time, undervaluing or
2 ignoring the severe economic harm caused by these closures.

3 RGGI is an unrecoverable "tax" on coal and
4 natural gas-fired generation in Pennsylvania.

5 All Pennsylvania generators will become less
6 competitive within PJM as compared to neighboring non-RGGI
7 PJM State generators such as those located in Ohio,
8 Indiana, Kentucky, and West Virginia.

9 RGGI will cause the immediate or near immediate
10 retirement of all of the coal-fired power plants in
11 Pennsylvania -- if you are familiar with the markets today,
12 it is a near certainty that this will occur -- and the loss
13 of the related economic benefits, the high-paying jobs, the
14 tax revenue, and the supporting industries anchored in
15 those communities.

16 One way to look at it is that RGGI is simply a
17 nuclear-tipped economic cruise missile aimed at the
18 coal-fired power plants and at the citizens located in
19 Allegheny, Armstrong, Cambria, and Indiana Counties. These
20 Pennsylvania counties represent "Ground Zero" for RGGI.

21 In light of RGGI's impact upon the plants and
22 upon the vulnerable communities where they are located,
23 certain coal-fired facilities, which have already invested
24 billions of dollars to remain in compliance with
25 environmental rules and regulations and remain operational

1 -- Cheswick, Homer City, Keystone, and Conemaugh -- engage
2 the economic consulting firm eConsult to work with us and
3 examine the contributions made by these plants and what
4 will be lost if they are forced to shutter prematurely.

5 Here is what we found:

6 Locally, these four facilities, on an annual
7 basis, generate 33.2 million megawatt hours of electricity;
8 just over a billion in operating expenditures a year;
9 622 people are employed directly by these facilities; and
10 we pay over \$91 million in employee compensation, including
11 benefits, on an annual basis.

12 Statewide, these facilities annually support
13 2.87 billion in total economic impact within Pennsylvania;
14 8,170 total jobs; and 539 million in employee compensation.
15 In my slides, you can also see the breakdown by
16 Pennsylvania county, the counties that I noted previously.

17 These same plants are very important to local
18 corporate citizens and among the largest State and local
19 taxpayers in those communities. They contribute 38 million
20 annually in income, sales, business, environmental,
21 municipal utility, and property taxes and fees.

22 There is no doubt that RGGI will diminish
23 Pennsylvania's premier national role as an exporter of
24 electricity. RGGI's program history in all the other RGGI
25 States so far proves that participants will generate less

1 electricity and import more out-of-State or out-of-region
2 power. This is referred to as "leakage," this concept.

3 RGGI provides a competitive advantage to new and
4 existing non-Pennsylvania generation resources located in
5 PJM States where RGGI is not adopted. Again,
6 West Virginia, Ohio, Indiana, and Kentucky benefit if
7 Pennsylvania adopts RGGI.

8 Net exports of Pennsylvania electricity will be
9 reduced, and we all remember from basic economics, the
10 principle of comparative advantage will prevail. New
11 projects will simply move right across the border from
12 Pennsylvania to more investment-friendly, non-RGGI States
13 and have an advantage over all existing Pennsylvania
14 generation.

15 In lieu of Pennsylvania exporting electricity,
16 RGGI will export new investment, new construction jobs, and
17 new operations jobs from Pennsylvania to those States.
18 Again, this is leakage.

19 RGGI will also diminish Pennsylvania's electric
20 energy resilience by causing the immediate or near
21 immediate shutdown of all coal-fired generation in
22 Pennsylvania. We will cease to have this robust resource
23 available to us during the next polar vortex or during
24 other extreme demands for electricity, whether technical or
25 weather related. And you can see in one of the slides how

1 coal has responded during those times of extreme demand.

2 RGGI represents value destruction and sends an
3 investment risk message to the capital markets, the energy
4 capital markets. Two examples:

5 In the summer of 2019, the uncertainty of RGGI,
6 RGGI rumors were spreading in Pennsylvania, and its
7 potentially adverse financial impact upon solid fueled
8 plants caused lenders to withdraw from certain lending
9 syndicates supporting coal-fired facilities.

10 In the fall of 2019, the proposed acquisition of
11 a coal refuse facility was withdrawn following the
12 announcement of RGGI. That plant will close at the end of
13 March.

14 Simply stated, the markets are watching us, and
15 even if unspoken, the markets will vote with their next
16 investment dollar. The economic principle of comparative
17 advantage will prevail, and lost Pennsylvania generation
18 will be replaced by new investment in PJM but outside of
19 Pennsylvania, places like Ohio and West Virginia, without
20 the added RGGI tax.

21 So finally, how do we move forward together?
22 There are certainly many people of good faith on both sides
23 of this discussion. Yet, we need to ensure that
24 transparency governs Pennsylvania's approach to RGGI and
25 its implications for the Commonwealth. The voice of all of

1 the stakeholders, including those most directly and
2 adversely affected, must be heard.

3 We ask that you commit your offices to supporting
4 the resilience and the competitiveness of Pennsylvania's
5 diversified energy portfolio and Pennsylvania's proud
6 position as the top energy-exporting State in the nation.
7 We ask that you embrace the vital direct economic
8 contribution from coal-fired facilities to the communities
9 that they serve.

10 As a matter of fairness and legitimate legal
11 authority, we believe that Pennsylvania must also adopt
12 prior legislative authorization before committing the
13 Commonwealth to RGGI, or for that matter, to any
14 cap-and-trade program.

15 Ultimately, if Pennsylvania proceeds down this
16 path, we can certainly agree not to implement RGGI or any
17 cap-and-trade program in Pennsylvania without all of the
18 PJM border States first implementing RGGI as well. This
19 would at least be a means of mitigating the damage caused
20 by leakage.

21 Without these sorts of protections, we are
22 unilaterally making a decision to destroy existing
23 investment and existing jobs in Pennsylvania, and we're
24 purchasing, at best, a diminished future for Pennsylvania's
25 energy markets.

1 Thank you.

2 MAJORITY CHAIRMAN METCALFE: Thank you, sir.

3 Mr. Cameron, we have next. You might want to
4 pull the microphone, sir, over in front of you there so we
5 can -- cameras are rolling. Thank you, sir.

6 MR. CAMERON: Good morning, Chairmen Metcalfe and
7 Vitali, Representatives, and Members of the Committee.

8 My name is Paul Cameron. I am the Business
9 Manager of IBEW Local 459 in Johnstown, Pennsylvania, and I
10 am here on behalf of the 1700 members of Local 459.

11 Local 459 has been representing the union members
12 who perform operation and maintenance work in the utility
13 industry of western Pennsylvania since 1934. Our members
14 perform the work of building and maintaining electric
15 transmission lines and distribution systems. We operate
16 and maintain hydro, natural gas, coal refuse generating
17 stations, as well as the three largest coal electric
18 generating stations in the State. That's why I'm here
19 today, to talk about the Homer City Generating Station,
20 Conemaugh Generating Station, Seward Generating Station,
21 Shawville Generating Station, and the Keystone Generating
22 Station, where I hold the job classification of a certified
23 welder, and I have been employed there for 30 years.

24 The generating stations I have mentioned have
25 evolved immensely since their initial construction. They

1 are constantly changing by adding new equipment, updating
2 operating procedures, and finding better ways to run a
3 cleaner, more efficient, and safe plant. Proof of this is
4 the 40 percent drop in per capita emissions from 2005 to
5 2017 of our Pennsylvania power plants. This is the same
6 reduction of the RGGI States, which makes me wonder if the
7 RGGI program actually is responsible for reduced emissions
8 or was it just the evolution of the industry?

9 When we talk about preserving or protecting
10 Pennsylvania's natural resources, we must be mindful of the
11 most important resource that Pennsylvania has -- its
12 workforce. The wage and benefit packages provided to the
13 workers that are negotiated between the unions and the
14 companies that operate the plants set a standard in the
15 area for wages, benefits, pensions, and retirement savings
16 plans while providing safe working conditions and job
17 security. These generating stations have been the core for
18 a steady economy for our area for generations.

19 Residing in Indiana County, I feel very lucky to
20 have had the opportunity to raise and provide for my family
21 in a community that has been fortunate not to have
22 experienced the adverse effects of a community in decline.
23 I credit that to the power generating industry that has
24 provided multiple generations with family-sustaining jobs.
25 These jobs support some of the best public school districts

1 in Pennsylvania where the communities are moving forward.

2 Being a part of these communities and having a
3 secure job is what the middle-class workforce dreams of.
4 Those of us in the coal electric generating industry are
5 proof that it does exist. Pennsylvania workers cannot
6 afford to lose these family-sustaining jobs, which is what
7 happens when a State joins RGGI.

8 Please keep in mind that it is always the working
9 people who have kept the economy going. Preserving these
10 family-sustaining jobs for the working people of
11 Pennsylvania is my number-one priority, and I ask that you
12 please make it yours.

13 In closing, I would like to mention:

14 When the cost of the power generator increases,
15 consumers pay more.

16 If Pennsylvania loses its status as a top
17 exporter of electric power, the workforce and communities
18 will suffer most.

19 I request that all House Members back Local 459
20 and our 1700 members who feel that RGGI presents a
21 dangerous threat to our livelihoods, our communities, and
22 our economic security.

23 We would ask that you support House Bill 2025,
24 and we ask that you oppose initiatives that would tax
25 Pennsylvania's electric generation.

1 And I respectfully ask Governor Wolf not to enter
2 into the multistate RGGI that will result in exporting jobs
3 and, for the first time, Pennsylvania becoming an importer
4 of electric power.

5 Thank you for your time.

6 MAJORITY CHAIRMAN METCALFE: Thank you, sir.

7 Mr. Shawn Steffee, Executive Board Trustee/
8 Business Agent, with the Boilermakers Local 154.

9 MR. STEFFEE: Thank you, Mr. Chair.

10 Good morning. My name is Shawn Steffee, and I
11 am the Business Agent and Executive Board Trustee for
12 Boilermakers Local 154 in Pittsburgh. I also serve as the
13 Recording Secretary of the South Central Building Trades,
14 and today I am here along with my business manager,
15 John Hughes, on behalf of almost 2,000 members and their
16 families to discuss our concerns about the energy situation
17 in Pennsylvania.

18 Our Local covers western Pennsylvania, parts of
19 Ohio, and West Virginia, while Local 13 in Philadelphia
20 serves the east side of the State.

21 Boilermakers are skilled tradesmen who are
22 proficient in all aspects of heavy construction industry.
23 We play a large role in the building and maintenance of
24 coal and gas-fired power plants, steel mills, paper mills,
25 refineries, and chemical plants. Today, I am here to show

1 you the severe impact that the loss of coal-generated
2 electricity will have in Pennsylvania due to RGGI.

3 NAES Power Contractors and Hayes Mechanical are
4 responsible for the bulk of the boilermaker work in
5 Homer City, Keystone, Conemaugh, and Seward just outside of
6 Pittsburgh. From 2017 through 2019, NAES and Hayes
7 Mechanical collectively reported 688,674.65 man-hours at a
8 \$31 million gross wage. That's conservative numbers.
9 These numbers do not account for the thousands of other
10 man-hours reported from other signatory contractors within
11 our jurisdiction, which is why I affirm these numbers are
12 conservative.

13 Enerfab Power and Industrial Company, the main
14 contractor at the now decommissioned Bruce Mansfield Power
15 Station in Beaver County, Pennsylvania, recorded 278,900
16 man-hours from 2017 to 2019 and gross wages of
17 \$14.5 million to the boilermakers.

18 Just across the border at the Sammis Plant in
19 Columbia County, Ohio, Enerfab reported 238,275 man-hours
20 from 2017 through 2019 and 14 million in gross wages, not
21 to mention that they have already projected over 200,000
22 man-hours at Sammis now for 2020, which is a direct
23 reflection of the shutdown at the Bruce Mansfield Plant in
24 Pennsylvania.

25 In the Northeast region of the United States,

1 several States have already signed on to the Regional
2 Greenhouse Gas Initiative, as we know. This affects
3 11 Boilermaker Locals whose members reside in these States.
4 To put things into perspective, in 2017 through 2019, these
5 States reported 6 million man-hours total. My Local,
6 combined with Local 13 in Philadelphia, reported 8 million
7 man-hours total for the entire State of Pennsylvania. As
8 you can see, our 11 sister Locals who reside in these RGGI
9 States are struggling, and I do not wish the same for
10 Pennsylvania.

11 Projected to start in 2022 across the border
12 from Greene County, Pennsylvania, in West Virginia is
13 Longview Power Clean Energy Center. Longview plans to
14 build a 1200 megawatt gas-fired combined cycle power plant
15 and a 70 megawatt solar farm at a total cost of
16 1.1 billion. Longview's CEO, Jeff Keffer, says this
17 facility will be a global model for clean fossil and
18 renewable energy development.

19 Now, here's a couple of facts.

20 They will run a 30 million, 6.2-mile pipeline
21 back into Greene County, Pennsylvania, tie into the
22 TransCanada-Columbia Pipeline, and use Marcellus Shale to
23 power West Virginia's new gas plant, which will create
24 millions in tax revenue and 5,000 construction jobs in
25 West Virginia.

1 The solar farm, which will primarily sit in
2 Pennsylvania, will receive renewable energy tax credits
3 from Pennsylvania because West Virginia has no such
4 program, and this will create two to four full-time jobs.

5 Senator Shelley Moore Capito, Senator Joe
6 Manchin, and Governor Jim Justice of West Virginia said
7 they will be an all-in energy State and truly put
8 West Virginia on the map. Pennsylvania should be pursuing
9 these hybrid power plants as a leader of electricity
10 generation. And make no mistake, we will never have these
11 opportunities if we join RGGI.

12 A \$5 billion ethane cracker plant has broken
13 ground as we speak in Belmont County, Ohio. RGGI States
14 would rather spend 950 million on the transmission line
15 from Canada, called the New England Clean Energy Connect,
16 and import hydroelectricity and receive tankers of natural
17 gas from foreign countries but will not let a pipeline from
18 Pennsylvania into their States to receive Marcellus Shale
19 gas.

20 Why would we want to follow the RGGI States when
21 they have the highest electricity prices, the highest cost
22 of living, terrible infrastructure, and all are importers
23 of electricity when we are the leaders of exporting
24 electricity? Why would we want to contribute to RGGI,
25 Incorporated, a 501(c)(3) nonprofit business based in

1 New York which oversees all RGGI States, employs a high
2 profile, a highly educated staff, who I would think would
3 require hefty salaries, and Pennsylvania will be their
4 largest contributor if we join?

5 Pennsylvania is demonized for using coal, but
6 43 biomass plants are operating in all these RGGI States
7 and provide 150 percent more CO2 per megawatt than coal,
8 and they are considered renewable energy, receiving tax
9 credits. Biomass has become the number-one renewable
10 energy in six RGGI States.

11 Let's consider Germany, a leader in renewable
12 energy, who are still unable to rely solely on renewables
13 alone to keep their grid stable. As we speak, they are
14 currently bulldozing ancient forests and historical towns
15 and churches to mine brown coal to stabilize their grid and
16 economy, wasting billions on renewable efforts and still
17 unable to meet their clean energy goals.

18 Why do we continue to push for solar, an
19 intermittent, unreliable source of energy? And as
20 predicted by many, including Michael Shellenberger, a
21 Green Book winner and Time Magazine's hero of the
22 environment, Michael states that solar panel disposal will
23 explode with full force and wreck the environment, China's
24 expert on solar waste calling it a ticking time bomb.
25 Japan's Environmental Ministry cannot recycle 10,000 tons

1 of solar panels and predicts 800,000 tons in 2020.

2 Our own heavily subsidized solar manufacturers
3 are facing recycling problems, many going bankrupt, leaving
4 taxpayers the burden to clean up toxic sites, costing
5 millions.

6 Two-hundred-foot windmill blades that cannot be
7 recycled are filling our landfills. Just ask Wyoming. And
8 as of February 3rd, Japan just announced 22 new coal-fired
9 power plants to be built in Japan. Why are they not using
10 renewables? Because coal works.

11 Therefore, PA must be proactive and implement and
12 subsidize carbon-capture technology so we can use our
13 abundant coal resources and control emissions. Let's
14 produce fertilizer, and let's create high-paying jobs. And
15 I urge the House to vote "yes" on Bill 2025 and keep
16 Pennsylvania a leader in exporting electricity.

17 Thank you, Members.

18 MAJORITY CHAIRMAN METCALFE: Thank you, sir.

19 Our final member of this panel, Mr. Donald Arena,
20 President of the South Central PA Building Trades Council.
21 Thank you, sir.

22 MR. ARENA: Yes. Good morning, Chairman
23 Metcalfe, Chairman Vitali, and the Members of the
24 Committee.

25 My name is Donald Arena. I am the President of

1 the South Central Building and Construction Trades
2 Council.

3 MAJORITY CHAIRMAN METCALFE: You might want to
4 pull that microphone just a little closer, sir, just to---

5 MR. ARENA: Oh; sorry. Is it on?

6 MAJORITY CHAIRMAN METCALFE: Yeah.

7 MR. ARENA: Oh; okay.

8 Okay. Our Council consists of 22 affiliated
9 building trades' local unions serving 7 counties in
10 west-central Pennsylvania, including Cambria and Indiana
11 County.

12 Our affiliated local unions provide manpower to
13 every aspect of the construction, maintenance, repair, and
14 service industries throughout the seven counties. Projects
15 that you may see our members on are as small as local
16 retail stores to large industrial manufacturing and power
17 generation plants.

18 One of our larger projects recently completed in
19 Cambria County is a 1,050 megawatt combined cycle natural
20 gas facility. This facility provided our members with
21 approximately 1.7 million man-hours over a 30-month
22 duration at approximately a billion dollars, and that's the
23 project, total project cost.

24 I have provided a fact sheet with a brief
25 overview of this project, and I do want to mention that

1 that project came in at 2 months early. It went commercial
2 2 months earlier than anticipated.

3 We also provide manpower to contractors that
4 service Conemaugh, Homer City, and Seward Generating
5 Stations, as well as plants outside our territory. We have
6 members at these plants year-round.

7 In addition, we do forced outages throughout the
8 year, as well as 7- to 8-week outages in the spring and
9 fall. As an example, in 2018, the Unit 1 fallout at
10 Conemaugh Station roughly was 8 weeks long and was over
11 215,000 man-hours. Our craft members' benefit, economic
12 benefit, was approximately \$19 million. In 2019, the
13 Unit 2 outage at Keystone Power Station was a similar
14 duration, with 259,000 man-hours and an economic benefit of
15 approximately \$23 million. I wanted to provide this
16 background information so you can understand the impact
17 that RGGI will have on craft people and the reduction of
18 man-hours.

19 In the last 10 years, we have seen numerous
20 coal-fired power plants either convert to natural gas or
21 retire, which reduced carbon emissions. Without RGGI in
22 place, it is estimated that the remainder of the coal-fired
23 plants will retire within the next 5 to 10 years, if not
24 sooner.

25 With RGGI in place, these plants will close

1 almost immediately after it is implemented. We need to let
2 these plants retire at their own pace. By doing this, we
3 will have the opportunity to replace these plants with
4 another form of energy instead of giving the opportunity to
5 another State in the PJM operating market. We need to
6 entice investors to build new facilities on these retired
7 generation sites, not deter them.

8 This would give the communities a chance to
9 recoup some of its tax revenue losses from the current
10 plant closings. Just the mere fact that the Governor has
11 announced that he would like to become part of the RGGI
12 program has already deterred investors from looking in the
13 Commonwealth of Pennsylvania to build future plants.

14 In Fayette County, there is a closed fossil-fuel
15 plant that retired in 2013, and it's called Hatfield Ferry.
16 This plant is slated to have a new combined cycle gas-fired
17 power plant built on its site. We understand that the
18 investors were considering not building this plant because
19 RGGI was a possibility in the Commonwealth.

20 Let's face facts. If I were an investor and I
21 had billions of dollars to invest in energy and I had a
22 choice between investing in the Commonwealth of
23 Pennsylvania as a RGGI State or investing in Ohio or
24 West Virginia that does not have an additional
25 cap-and-trade mechanism in place, which one would I invest

1 in? Why would developers build a gas-fired power plant in
2 a State that would have an additional operating cost of
3 \$2.35 per megawatt hour?

4 I think we need to look at the big picture. We
5 are a part of the PJM operating market that consists of
6 13 States, so developers could build anywhere in the market
7 and still provide power to the grid. The power generation
8 business in our Commonwealth is already exceeding the CO2
9 benchmarks.

10 Again, why not let these plants retire at a
11 natural progression? This would give us an opportunity for
12 investors to put power plants on those old fossil-fuel
13 sites, which in turn would give the community, a community
14 that will be under a distressed status, an opportunity to
15 recoup some of its losses and tax revenue.

16 As I mentioned before, 1,050 megawatt combined
17 cycle power plant provides workers with about 1.75 million
18 man-hours. Granted, we don't get the maintenance out of
19 these plants like we do coal-fired power plants, and these
20 plants operate with much less manpower, but at least the
21 community would regain some of its tax revenue losses.

22 My hometown is Johnstown, PA. Johnstown, PA, was
23 a thriving steelmaking town until the early eighties.
24 During the years of the Cold War, Johnstown, PA, was one of
25 the targets because of the fact that it made so much steel.

1 When the steel mills closed, the town was devastated.

2 By 1992, the city of Johnstown became a
3 distressed city under Act 47. By October of 2021, they
4 will be out of their distressed status. That's 29 years,
5 and at this point, they aren't a hundred percent sure how
6 it's going to work out. The point I'm trying to make is
7 that communities don't recoup as fast as you think from
8 major industries moving out of the area.

9 Now, in Johnstown's case, it was unavoidable
10 based on economic conditions and a major flood in 1977. In
11 this case, by implementing RGGI, you are creating an
12 economic hardship for these communities. With RGGI in
13 place, once again, investors are less likely to come.

14 In closing, I ask that all branches of State
15 Government look at all factors and all data before deciding
16 entering into the RGGI program.

17 Thank you again for my opportunity to testify.

18 MAJORITY CHAIRMAN METCALFE: Thank you very much,
19 sir.

20 Representative Otten with the first question.

21 REPRESENTATIVE OTTEN: Thank you, Mr. Chairman.

22 Thank you for your testimony. I heard several
23 things that raised questions for me.

24 Someone mentioned that our most important
25 resource is our workforce, and I agree that our workforce

1 is very important, but I would argue that our most
2 important resource is our children and our families. And I
3 think that as most of you probably also are parents, not
4 one of us would be willing to sacrifice a child for a job.

5 And that RGGI would create a threat to the
6 livelihoods, a community's quality of life, and the
7 economic vitality of some communities, but RGGI would
8 actually improve the quality of life, the economic
9 vitality, and livelihoods of many families. RGGI would
10 give the opportunity to work on electrification---

11 MAJORITY CHAIRMAN METCALFE: Excuse me.

12 Representative Otten, we're not taking---

13 REPRESENTATIVE OTTEN: I do have a question. I
14 have a question.

15 MAJORITY CHAIRMAN METCALFE: We're not taking
16 testimony from you.

17 REPRESENTATIVE OTTEN: Okay.

18 MAJORITY CHAIRMAN METCALFE: We're asking for a
19 question, and we have other Members who would like to ask
20 questions, on your side of the aisle especially. So
21 please---

22 REPRESENTATIVE OTTEN: Okay. I have a question.
23 I have a question.

24 MAJORITY CHAIRMAN METCALFE: Round up with a
25 question, please.

1 REPRESENTATIVE OTTEN: So we would be able to
2 invest in electrification of transportation; reforestation,
3 which there is no better carbon capture mechanism than a
4 tree; rebates back to consumers to lower their electricity
5 costs.

6 But my question is, how many man-hours are worth
7 a life, and what is your statistical value of a life?

8 In Beaver County, we experienced an explosion---

9 MAJORITY CHAIRMAN METCALFE: Representative
10 Otten, thank you. Thank you for your time to testify, but
11 we weren't accepting---

12 REPRESENTATIVE OTTEN: Are you silencing my
13 question?

14 MAJORITY CHAIRMAN METCALFE: ---we weren't
15 accepting testimony, and your question to try and pose to
16 these gentlemen, who are experts in their own fields, to
17 ask them a question---

18 REPRESENTATIVE OTTEN: I think that's a
19 reasonable question, Mr. Chairman.

20 MAJORITY CHAIRMAN METCALFE: ---on how many hours
21 are worth a life is a ludicrous question and something that
22 shouldn't be posed respectfully to any testifier before
23 this Committee.

24 REPRESENTATIVE OTTEN: Mr. Chairman, the airline
25 industry has---

1 MAJORITY CHAIRMAN METCALFE: So thank you.

2 On to Representative Krueger-Braneky for a
3 question.

4 REPRESENTATIVE KRUEGER: Mr. Chairman, I would
5 like to cede my time to Representative Otten to actually
6 finish her question.

7 MAJORITY CHAIRMAN METCALFE: We don't cede time
8 here.

9 Representative Comitta.

10 REPRESENTATIVE COMITTA: Thank you, Mr. Chair.
11 Thank you all for being here.

12 First, I just wanted to mention to Mr. Cameron
13 that preserving family-sustaining jobs for the working
14 people of Pennsylvania is a priority that I and I think all
15 of us share, and I want to tell you I respect that.

16 MR. CAMERON: Thank you.

17 REPRESENTATIVE COMITTA: And I think something
18 that we also likely all share is a desire to do the right
19 thing for those families that the jobs sustain and to make
20 sure that we are taking action that protects the air and
21 the water and the environment for our children and
22 families.

23 So there is a tension here between jobs and
24 protecting the environment, which is outlined in our
25 Pennsylvania Constitution as something that we should be

1 protecting as well, and we all know that. And I think that
2 we should have ongoing discussions about overarching energy
3 policy in Pennsylvania and the region---

4 MAJORITY CHAIRMAN METCALFE: Representative
5 Comitta.

6 REPRESENTATIVE COMITTA: ---to figure out how we
7 balance that. And I am coming to the---

8 MAJORITY CHAIRMAN METCALFE: A question, please.

9 REPRESENTATIVE COMITTA: Thank you. Yes.

10 MAJORITY CHAIRMAN METCALFE: Again, Members
11 aren't testifying. That's disrespectful to not allow us
12 our time for the testimony when you're trying to testify
13 also. Please ask the questions.

14 REPRESENTATIVE COMITTA: My question is this:
15 It's my understanding that the RGGI draft regulation sets
16 aside almost 8 million tons of CO2 for waste coal plants.
17 So do you think that that set-aside is enough and that the
18 waste coal industry might support Pennsylvania's entry into
19 RGGI? And even with the proposed set-aside, do you think
20 waste coal-fired power plants will actually close? There's
21 a set-aside in RGGI for coal plants.

22 MR. BRISINI: I'll respond to that.

23 MAJORITY CHAIRMAN METCALFE: Please.

24 MR. BRISINI: The 7.9 million tons identified as
25 a set-aside is actually a low number based upon current

1 times, which these plants are under great economic stress.

2 The circumstance that you have, the set-aside,
3 will that set-aside save those plants? Not under the
4 current capacity market. There's a variety of issues that
5 are causing the problems.

6 FERC has identified already that the capacity
7 market is artificially suppressed in price. That's a
8 decision they have made. They haven't been able to figure
9 out a responsible way. The capacity market right now is
10 somewhere in the vicinity of \$75 or \$80 per megawatt day,
11 and that's a fraction. That's less than half of what it
12 normally has been.

13 So you operate in these markets. Will that
14 set-aside save them? No. Will it result in coal
15 refuse-fired plants supporting RGGI? I don't think you
16 will find that they will necessarily support the RGGI rule,
17 because the challenge in it -- and I raise this point, and
18 I think it's a very important point.

19 The conversation that is being attempted to be
20 made is that Pennsylvania joining RGGI is about an
21 environmental or a climate outcome. My research into the
22 information demonstrates that you really achieve very
23 little in terms of carbon reduction. You will achieve
24 probably 1 percent -- likely less -- 1 percent of the
25 U.S.--- I mean, in other words, you're going to get

1 something less than 20 million tons reduction in
2 Pennsylvania. But if you replace all of the coal that's
3 eliminated by RGGI participation and you take those
4 emissions and basically assume those emissions will replace
5 the emissions from coal, you get this number that's about
6 1 percent of the total U.S. carbon dioxide from electric
7 generating units.

8 So I venture to say that Pennsylvania's
9 participation in RGGI is not an environmental or a climate
10 discussion. It's a discussion about whether or not
11 Pennsylvania is willing to accept the economic burdens and
12 the jobs -- and you can't support children without jobs;
13 you can't provide them health care without jobs -- and
14 whether or not we are willing to do this to Pennsylvania
15 when there's really not a commensurate benefit identifiable
16 on a local, global, or regional scale.

17 MAJORITY CHAIRMAN METCALFE: Thank you, sir, for
18 your answer. And we are at the end of our time for this
19 panel, but we thank you gentlemen for testifying today.

20 Just to assure you that what you said to this
21 Committee today is not lost on the Committee. Don't walk
22 away thinking that based on the way that certain questions
23 might have been posed to you. We did hear you loud and
24 clear that this will harm your communities, harm the
25 individuals who you are representing, both through the

1 labor unions and through the corporations, and will
2 ultimately harm our economy in a way that drives business
3 out of Pennsylvania into the surrounding States, causing
4 that leakage that was testified of earlier.

5 So thank you for joining us today. Thank you for
6 taking the time to be with us and travel here today, and---

7 MINORITY CHAIRMAN VITALI: Mr. Chairman, if you
8 can indulge me in a brief comment.

9 I---

10 MAJORITY CHAIRMAN METCALFE: Excuse me,
11 Representative Vitali. You're out of order. I'm not
12 indulging you in any comments right now. We're going to
13 move on to the next panel.

14 Thank you, gentlemen. Have a great day.

15 MINORITY CHAIRMAN VITALI: In defense of my
16 Members---

17 MAJORITY CHAIRMAN METCALFE: Representative
18 Vitali, you are out of order, sir. Please turn off your
19 microphone.

20 We now are inviting the next panel of testifiers:
21 Mr. Carl Marrara, Vice President, Government Affairs, the
22 Pennsylvania Manufacturers' Association; Mr. Kevin Sunday,
23 Director, Government Affairs, Pennsylvania Chamber of
24 Business and Industry; Mr. Rod Williamson, Executive
25 Director, Industrial Energy Consumers of Pennsylvania; and

1 Ms. Rebecca Oyler, Legislative Director, the National
2 Federation of Independent Business.

3 These four individuals will be presenting next.
4 They each have been informed of their allotted times. As
5 we move through that, we'll have some Q-and-A time with
6 them at the end.

7 We'll start off with Mr. Carl Marrara.

8 MR. MARRARA: Yes, sir.

9 MAJORITY CHAIRMAN METCALFE: If he's ready to go,
10 we're ready for him to start.

11 MR. MARRARA: Yes, sir.

12 MAJORITY CHAIRMAN METCALFE: Thank you very much
13 for being with us all. Thank you.

14 MR. MARRARA: Good morning, Chairman and esteemed
15 Members of the Committee.

16 I am Carl A. Marrara. I am the Vice President of
17 Government Affairs for the Pennsylvania Manufacturers'
18 Association, the nonprofit statewide organization
19 representing the manufacturing sector. It's 570,000
20 employees on the plant floor, millions of additional jobs
21 in supporting industries, and more than \$93 billion in
22 gross State product in Pennsylvania's public policy
23 process.

24 Let us first begin by establishing a commonsense
25 baseline: that everyone wants a clean, healthy, sustainable

1 environment. The issue at hand is whether or not a
2 government program that will undoubtedly add substantial
3 costs to Pennsylvania's electricity consumers is in fact
4 the best mechanism to achieve the cleanest, healthiest, and
5 most sustainable environment possible. You'll find that
6 the answer to this question is clearly that RGGI does not
7 accomplish this goal but does negatively impact
8 Pennsylvania's economy in a punishing way.

9 It is imperative that Pennsylvania policymakers
10 not enact laws or regulations that place our Commonwealth
11 at a competitive disadvantage to our competitor States.
12 Laws and regulations should not be more stringent than
13 Federal regulations or laws unless there is a compelling
14 reason that is unique to our Commonwealth.

15 It is important to ensure that environmental
16 regulation is approached on sound scientific evidence to
17 ensure that regulations are reasonable and within
18 technological limits. It is likewise prudent that these
19 regulations actually achieve real environmental benefits
20 and do not advantage one sector of the economy to the
21 detriment of another. RGGI fails all of these bright-line
22 tests and should be rejected by Governor Wolf and the
23 Pennsylvania General Assembly.

24 According to research published by the
25 Cato Institute by David Stevenson, who shared his expertise

1 earlier, "RGGI allowance costs added to already high
2 regional electric bills. The combined pricing impact
3 resulted in a 12 percent drop in goods production and a
4 34 percent drop in the production of energy-intensive
5 goods. Comparison states increased goods production by
6 20 percent and lost...5 percent of energy-intensive
7 manufacturing. Power imports from other States increased
8 from 8...to 17 percent."

9 One of those States where the jobs moved to and
10 the electric generation came from to supply the RGGI States
11 was Pennsylvania. By entering into RGGI, this shift would
12 continue, but to other PJM Interconnection States such as
13 West Virginia, Ohio, and Kentucky, benefiting from our poor
14 public policy decisionmaking.

15 Returning to the original premise of wanting a
16 clean, healthy, and sustainable environment, Governor Wolf
17 proposed targeted emissions reductions of 26 percent by the
18 year 2025, which is well within striking distance sitting
19 here today, some 6 years away. The private sector has led
20 the way doing what the private sector does best:
21 innovating, inventing, and forging a better future for all
22 of us.

23 Energy-related CO2 emissions have decreased
24 22 percent from 2005 to 2016. With more natural
25 gas-fired power plants coming online since 2016, that

1 percentage will only increase as the data is updated and
2 republished. Governor Wolf's goals are being met without
3 entering Pennsylvania into a regional accord that will
4 thwart private-sector innovation, forcing layoffs of
5 thousands of our Commonwealth's workers and putting our
6 economy in a tailspin, as entire communities will be
7 negatively impacted.

8 You'll hear, and you have heard from others
9 today, about the importance of coal in our Commonwealth's
10 electricity market, but the premature shuttering of coal
11 and waste coal facilities will have even larger impacts.

12 Consider the fact that Pennsylvania's steelmakers
13 require coal to make coke and coke to make steel. Coking
14 coal, more specifically known as metallurgical coal, is a
15 necessary ingredient to produce steel. There is no
16 substitute. Many of the same mining operations that
17 extract coal for power generation also mine, or owners of
18 those companies own metallurgical coal-mining operations as
19 well. If the power plants shut down suddenly and
20 prematurely, this will surely impact the mining jobs that
21 supply the coal to the power plants.

22 If those mining operations have to shutter their
23 businesses, again, early and prematurely, the Pennsylvania
24 steel industry will be impacted, as a key feedstock to
25 their product will be more difficult and expensive to

1 obtain. The regional accord threatens entire industries
2 well outside of the realm of what Governor Wolf has aimed
3 at, and it puts Pennsylvania at a unique competitive
4 disadvantage.

5 We do care deeply about the environment, which is
6 why we want this industrial activity to happen here in
7 Pennsylvania than elsewhere in the world. We will benefit
8 from the jobs and the economic activity, but we'll also
9 benefit from the fact that Pennsylvania has some of the
10 strictest regulations when it comes to emission standards,
11 oil and gas drilling, and mineral extractions.

12 From an environmental standpoint, we would rather
13 that activity happen here where companies are good stewards
14 of their environment and there is strict oversight rather
15 than in Russia where environmental regulations are skirted,
16 or China where there are serious human rights violations,
17 worker exploitation, and heavy, heavy pollution.

18 By entering into RGGI, industrial activity will
19 be relocated, and who knows where it's going to go to. Tax
20 policies at the Federal level are making it the smart
21 business decision to locate, hire, and expand here in the
22 United States. Let's not drive that activity back across
23 our borders into neighboring States, or worse, foreign
24 countries.

25 It is not a stretch to say that by supporting

1 RGGI, you are supporting Russian and/or Middle Eastern
2 energy leadership and Chinese steel-dumping. Let's work
3 with our industries to innovate, invent, and forge a clean,
4 healthy, and sustainable environment, not overregulate our
5 many vital industries out of existence.

6 Thank you, Chairman.

7 MAJORITY CHAIRMAN METCALFE: Thank you, sir.

8 Mr. Kevin Sunday from the Pennsylvania Chamber.

9 MR. SUNDAY: Thank you, and good morning. Pardon
10 my voice.

11 My name is Kevin Sunday, Director of Government
12 Affairs with the PA Chamber. We're the largest broad-based
13 business advocacy organization in the Commonwealth, and our
14 nearly 10,000 members of all sizes in commercial sectors
15 rely on affordable energy and a predictable regulatory
16 environment.

17 My remarks this morning will serve as a brief
18 overview of what is contained in the written testimony I
19 have submitted. But first, as a statement of policy,
20 environmental stewardship and economic growth are mutually
21 compatible, and policy should be framed and implemented to
22 achieve both.

23 Environmental goals should be established based
24 on the perspectives of stakeholders and the public, along
25 with clearly defined objectives, risks, alternatives, and

1 costs, and it is imperative that government then provide
2 flexibility to industry to achieve that goal. Market-based
3 approaches can be a means to secure the attainment of those
4 goals in a cost-effective manner, but at the same time, it
5 is vital that costs do not exceed the benefits.

6 As we stated when the Governor signed his
7 Executive Order last October directing DEP to begin
8 crafting regulations to implement RGGI, climate change is
9 real, and so is the need to have business at the table to
10 discuss solutions and trade-offs.

11 I would also like to mention that the major
12 statutes in question that guide and direct DEP on its
13 duties, the State Air Pollution Control Act and the
14 Federal Clean Air Act, were written decades before the
15 topic of greenhouse gas regulation became a focal point of
16 the discussion in energy policy. Nonetheless, the policy
17 directives of those statutes remain.

18 The Clean Air Act directs EPA and States to
19 implement its provision in a manner that promotes public
20 health and welfare and improves the productive capacity of
21 the population. And the State Air Pollution Control Act,
22 which is quite broadly written in terms of powers and
23 duties the General Assembly granted the agency, directs DEP
24 to protect air resources in a manner that encourages the
25 development, attraction, and expansion of industry,

1 commerce, and agriculture.

2 While these statutes have been implemented over
3 decades, our member companies, their boards of directors,
4 their investors, are asking what can be done to reduce
5 emissions and improve sustainability. Similar steps our
6 members have taken might be introducing a hundred percent
7 clean energy products into PUC's marketplace for retail
8 shopping. Other folks have innovated into microgrids to
9 pair renewables and natural gas systems at airports and
10 defense facilities. Food manufacturers, pulp and paper and
11 steel processors, educational institutions and hospitals,
12 have adopted combined heat and power systems to improve
13 resilience and reliability. And logistics companies are
14 converting portions of their fleets to alternative fuel
15 vehicles to reduce emissions and costs.

16 And as a result of the existing regulatory
17 framework and voluntary efforts like these, criteria
18 pollutants such as NOx have fallen 65 percent over the past
19 two decades, SO2 by 90 percent, and CO2 economy-wide in
20 this State by 22 percent. In fact, only one other State in
21 the entire country has reduced its greenhouse gas emissions
22 more than Pennsylvania has since 2005.

23 We have seen competitive markets deliver
24 emissions reductions while preserving Pennsylvania's role
25 as a net energy exporter. And it's paramount that as

1 energy and environmental policy is developed and
2 implemented, the State remain a net energy exporter, and we
3 appreciate the Administration and the General Assembly have
4 both stated they have a goal of preserving that status.

5 Flexibility is key to a successful regulatory
6 framework, and to cite one example, in 2017, DEP finalized
7 a provision of Federal ozone requirements that providing
8 flexibility achieved a 50-percent, year-over-year reduction
9 in NOx emissions.

10 Now, specifically to RGGI, a preliminary draft
11 through the regulation was released only last week, but a
12 few points on that.

13 It notably does not contain a starting cap
14 number, as it's our understanding the Administration is
15 continuing to engage with RGGI States as to what level
16 Pennsylvania must start from. So it's unclear at this
17 point exactly how stringent or flexible Pennsylvania's
18 ultimate rule would be in order to be accepted by other
19 RGGI States.

20 We also are not able, as a result of this cap, to
21 offer a precise cost-benefit analysis. Our members do have
22 some concern about leakage and costs, leakage being the
23 shift in investment to non-RGGI States, and that would
24 occur if RGGI credit prices increase significantly.

25 With that said, we do recognize RGGI compliance

1 costs and the associated impacts, and PJM capacity and
2 energy markets are just a few of the many components to the
3 end-user price that ratepayers see, and the ultimate impact
4 remains to be seen, particularly given two outstanding
5 issues. One is how PJM might ultimately incorporate RGGI
6 or other State-level policies into its market rules, which
7 is an open question right now that was referenced earlier,
8 and whether given folks proceeding requiring a rewrite of
9 PJM's market rules means companies must adjust their bids
10 to account for impacts from RGGI or these other State-level
11 policies.

12 We do appreciate that in a preliminary review of
13 the regulation, only one industrial facility will have
14 direct compliance obligations. Most of the burden would
15 fall, however, on power generation.

16 To close, this is a broad, complex topic with
17 several outstanding questions and concerns, which I have
18 laid out in the testimony, not the least being the extent
19 to which there needs to be agreement between the General
20 Assembly and the Administration on the existing provisions
21 of the Air Pollution Control Act, which obligates the
22 middle to the General Assembly by DEP regarding multistate
23 agreements on air emissions.

24 Thank you for the opportunity to speak before you
25 this morning, and we look forward to, with diligence and

1 prudence, engaging the General Assembly and the
2 Administration on behalf of our membership.

3 Thank you.

4 MAJORITY CHAIRMAN METCALFE: Thank you.

5 Mr. Rod Williamson, Executive Director from the
6 Industrial Energy Consumers of Pennsylvania.

7 MR. WILLIAMSON: Yes.

8 Chairman Metcalfe, Chairman Vitali, Members of
9 the Committee, thank you for allowing me to be here this
10 morning.

11 So the Industrial Energy Consumers of
12 Pennsylvania, it's a trade association of energy-intensive
13 large manufacturing companies that have facilities all
14 across the Commonwealth that offer, you know, good-paying
15 jobs and the associated benefits with those jobs.

16 And these companies have significant expenditures
17 dedicated to electricity costs. Moreover, because these
18 facilities, these businesses they operate, they're exposed
19 to global trade, they cannot merely pass additional costs
20 on to their customers without risking the loss of those
21 customers to their global competition.

22 But let me be clear, our issue is not with the
23 underlying goals of reducing carbon emissions but rather
24 what we feel is the unnecessary cost that would be imposed
25 on electric generation in Pennsylvania and ultimately on

1 the facilities that my member companies operate associated
2 with the carbon cap-and-trade program, like the Regional
3 Greenhouse Gas Initiative.

4 You have heard a lot of data here this morning,
5 and you heard from David Stevenson about the impact of
6 goods production when he compared the RGGI States to some
7 of the, you know, a core set of comparable non-RGGI States,
8 you know, the impact to energy-intensive businesses. And
9 what we're talking about there is primary metals, food
10 processing, paper products, petroleum refining and
11 chemicals.

12 And you have to remember that at the time of that
13 study as well, the time frame they looked at, 2007 to 2014,
14 manufacturing across the U.S. was struggling. We saw the
15 impact of that year in Pennsylvania with the steel
16 industry. And a large part of that was also associated
17 with energy costs in the U.S. at that time. We are now
18 starting to see the benefit of lower energy costs across
19 the U.S., but specifically here in Pennsylvania because of
20 the deregulated marketplace that we have put in place.

21 So when we look at this particular issue of RGGI,
22 a couple of the key items that I just want to highlight
23 based on the data that has been shared already is, you
24 know, the overall costs of the RGGI program in Pennsylvania
25 would not be comparable to any other States in the RGGI

1 program. Pennsylvania is an energy-producing State. When
2 you apply that carbon tax to the carbon emissions
3 associated with the energy production in this State, that
4 is going to be, we have heard the figures, it's a
5 significant cost that is going to be imposed upon the
6 economy here in Pennsylvania.

7 But more importantly, when you look at, what are
8 we trying to achieve -- the carbon reduction, right? -- the
9 data that also has been shared there is Pennsylvania has
10 already reduced more on an absolute basis, the metric tons
11 of carbon, than any other RGGI State.

12 And there's a presenter that I like who always
13 says, don't tell me what it is; tell me what it means,
14 right? So how can this be? How can it be that
15 Pennsylvania has reduced carbon emissions more than these
16 other RGGI States? It's because Pennsylvania has already
17 taken steps. They passed laws to increase renewable energy
18 and improve energy efficiency. And more importantly,
19 Pennsylvania's competitive electricity market continues to
20 add lower carbon dioxide emitting generation while
21 decreasing costs to customers.

22 Finally, I would like to point out that
23 industrial manufacturing customers have already achieved
24 the greatest reduction in their CO2 emissions than any
25 other sector associated with their energy usage through the

1 commitment to energy efficiency and should not be penalized
2 by a RGGI program.

3 Data from the EIA, the Energy Administration, the
4 Information Administration, and the U.S. Bureau of Economic
5 Analysis, and that's presented in my chart in my written
6 testimony, shows a steady 52 percent decrease in industrial
7 manufacturing energy intensity going back to 1987. This
8 behavior is well before States have implemented or required
9 or mandated any renewable or energy efficiency program.
10 This type of behavior is driven by a set of behaviors that
11 require it to survive in an increasingly competitive global
12 market.

13 So in summary, joining RGGI and incurring the
14 increased costs associated with the initiative needs to be
15 analyzed very closely, as the data suggests that the
16 carbon reduction goals sought by the Commonwealth can be
17 and have been achieved without the adoption of a regional
18 framework.

19 Thank you.

20 MAJORITY CHAIRMAN METCALFE: Thank you, sir.

21 Ms. Rebecca Oyler, Legislative Director from
22 NFIB. Thank you, ma'am, for joining us.

23 MS. OYLER: Thank you.

24 Good morning, Chairman and Members of the
25 Committee. My name is Rebecca Oyler, and I'm the

1 Legislative Director for the National Federation of
2 Independent Business in Pennsylvania.

3 NFIB is the premier small business advocacy
4 organization with about 13,000 members in Pennsylvania and
5 about 300,000 nationwide. We appreciate your allowing us
6 to be here today to speak on behalf of Pennsylvania's small
7 businesses.

8 Given the time constraints, I'm going to provide
9 an abbreviated version of my written testimony. I'm going
10 to try to focus specifically on small businesses.

11 Small business owners care about the environment
12 around them and they want to be good stewards. Many of
13 them make their living from natural resources, from
14 whitewater rafting operators, to farm-to-table restaurants,
15 to solar panel installers. They understand that balance is
16 key.

17 They also know that competitive energy prices are
18 essential to operating a small business. NFIB surveys have
19 found that energy costs are one of the top three business
20 expenditures in 35 percent of small businesses. But even
21 if they are not in the top three, every business, large and
22 small, depends on services and materials along the supply
23 chain that are impacted by energy prices.

24 But because of their size, small business owners
25 are sensitive to energy cost increases. This is

1 particularly true of energy-intensive small businesses,
2 like, for instance, laundromats, car dealerships,
3 convenience stores, and small manufacturers. Tight margins
4 make it difficult to adjust the price of their goods and
5 services or to change their business practices quickly
6 enough to manage steep increases. For example, most owners
7 can't afford to buy new, more energy-efficient equipment if
8 current equipment still has useful life.

9 We have heard about how Pennsylvania is fortunate
10 to have certain energy advantages. We have heard a lot
11 about that today. But first, our competitive electric
12 market allows small businesses, like all consumers, to shop
13 for the best price for their energy needs. Electric
14 deregulation has led to competitively low energy rates,
15 innovations in energy distribution, and new products and
16 services for all consumers. In fact, electric competition
17 has produced a market for renewable energy sources, which
18 many Pennsylvanians choose to purchase.

19 And of course we can't talk about Pennsylvania's
20 competitive advantages without talking about the
21 innovations in hydraulic fracturing and horizontal drilling
22 that have revolutionized energy and already reduced CO2
23 emissions here in our State and indeed throughout the
24 world. These advantages have helped make Pennsylvania
25 energy competitive among States, where it ranks number 16

1 for business energy costs. This is a key selling point for
2 business location and expansion and a factor that helps
3 existing businesses stay competitive.

4 By comparison, the States currently in RGGI rank
5 40th through 47th, with only Maryland, number 33, and
6 Delaware, 37, ranking better than 40. The RGGI States are
7 at the bottom of business energy competitiveness. Overall,
8 energy costs are lower in Pennsylvania than in every RGGI
9 State.

10 As we have heard, RGGI will impose significant
11 costs on Pennsylvania's electric producers, which they will
12 pass on in higher electric bills to small businesses and
13 consumers. More of Pennsylvania's coal and natural gas
14 will be shipped out of State, as we have heard today, to
15 non-RGGI States where electric generation is less
16 expensive. Jobs will be lost in the communities where
17 power plants close -- not just the jobs in these plants,
18 however, but the jobs with the small grocery stores,
19 garages, contractors, retailers, and other small businesses
20 that serve those communities.

21 Given the direct and indirect costs involved, we
22 believe that RGGI is effectively a hidden tax that will
23 impact the entire economy and lead to considerable job
24 losses. The question the General Assembly should consider
25 is whether the benefits are worth the considerable costs

1 that RGGI will bring.

2 DEP has stated that to have the desired impact on
3 climate change models, Pennsylvania's commitment to RGGI
4 would not be enough. In fact, all States would need to
5 commit to similar greenhouse gas emissions reductions, and
6 all nations would have to meet comparable goals. This
7 seems unlikely and makes us question the true benefit of
8 Pennsylvania for joining RGGI.

9 If the primary benefit of CO2 is reduction --
10 we've already heard today from many of our speakers about
11 how we have already reduced our CO2 emissions in the energy
12 sector quite a bit -- DEP's plan will raise revenue for the
13 State to spend on air pollution reduction programs. If
14 pollution reduction is the primary goal of joining RGGI,
15 however, Pennsylvania is again ahead of the curve there.
16 Total emissions were down 88 percent between 1990 and 2017.

17 Indeed, pollution reduction efforts have been an
18 unheralded success, and our air is cleaner than it has been
19 in decades. Of course, we can always do better, but
20 committing the State to the overhead of an expensive and
21 complicated carbon trading program is not the only answer.
22 Consideration should be given to finding real market
23 incentives here in Pennsylvania -- in Pennsylvania, I
24 should emphasize -- that directly improve our local
25 communities. Pennsylvania should consider creating

1 flexible and innovative funding solutions to incentivize
2 public and private investment in local projects that really
3 do improve air quality. Eligible projects could include
4 reforestation, improved forest management, pedestrian and
5 bike trails, parking areas for shared-ride programs, even
6 abandoned well plugging.

7 True free market solutions will inspire people to
8 innovate without hindering economic prosperity. Market
9 forces are creating even more innovations every day that
10 will make the world a better place, but many of these ideas
11 will come from entrepreneurs whose small businesses need
12 strong economic conditions to thrive. Indeed, studies have
13 shown that the more prosperous a society, the better it
14 cares for its resources.

15 It is most appropriate for the General Assembly
16 rather than the Executive alone to weigh costs and benefits
17 involved in the decision to join RGGI. This is why we
18 support House Bill 2025. In fact, giving RGGI the ability
19 to control the artificially created market for allowances
20 and the tax effectively that results from them may be an
21 unconstitutional delegation of the Legislature's authority
22 to levy taxes and make expenditures. This is all the more
23 reason to consider House Bill 2025 as a check on the
24 authority of the Executive Branch.

25 Thank you again for the opportunity to speak. I

1 would be happy to answer questions.

2 MAJORITY CHAIRMAN METCALFE: Thank you very much.

3 Representative Vitali -- for a question.

4 MINORITY CHAIRMAN VITALI: Okay.

5 I just want to note at the outset, every one of
6 the speakers seems to be responding to the RGGI in
7 isolation. I think even the proponents of RGGI will tell
8 you that it has to be RGGI in combination with an increase
9 in the AEPS to get to the desired carbon reduction. So if
10 you could perhaps respond to that.

11 But my question to you is this: You know,
12 listen, Australia, you have a country that has been on
13 fire. Puerto Rico has been devastated. You have
14 Superstorm Sandy. You have a world that is suffering
15 devastating effects of climate change. What, you know --
16 we're not getting the carbon neutrality by midcentury by
17 switching to gas, and I want every one of you to answer
18 this. And thank you, Mr. Sunday, for acknowledging the
19 seriousness, the reality of climate change. But what I
20 want every one of you to tell me is, what is your plan?
21 What is your plan to get us to carbon neutrality by 2020 to
22 avoid this slow, severe catastrophe this planet is moving
23 towards? What's your plan? How are we going to get there?

24 MAJORITY CHAIRMAN METCALFE: Thank you,
25 Representative Vitali, for that impassioned question that

1 the speakers did not testify to today. I don't think any
2 of them proffered that they have a plan. What I did hear
3 them proffer was the marketplace and private sector doing
4 what they do best with government out of the way: actually
5 produce better results than government programs to address
6 any concern that we may be facing, including the CO2 issue
7 and the crisis that you have created in your own mind like
8 a sci-fi movie with the planet on fire.

9 Many of us believe there is climate change,
10 Representative Vitali, but not the kind of climate change
11 crisis that you try and exaggerate like you should be
12 writing for a sci-fi company.

13 Members with legitimate questions?

14 Representative Comitta -- with a question,
15 please.

16 REPRESENTATIVE COMITTA: Thank you, Mr. Chairman,
17 and thank you, each of you, for being here today.

18 And I would also like to say that your panel and
19 really every panel recognizes that climate change is an
20 issue that we all need to address. I love your talking
21 about innovation and entrepreneurship, because goodness
22 knows we need more of that now more than ever. And our
23 businesses and our industries are going to make it happen,
24 and we want Pennsylvania, the Legislature and the Governor,
25 to be partners.

1 And again, as I said earlier, there is this
2 tension between the jobs and industries and a clean
3 environment, and I believe that the solutions lie, perhaps,
4 you know, with everyone who has testified today and the
5 environmental community as well, and I look forward to
6 those conversations.

7 But I do have a -- so in addition to my
8 thank-you, I have a real question for Mr. Williamson.

9 The draft RGGI regulation has an exemption for
10 qualifying cogeneration industries that create and use
11 their own energy. Would your members be able to take
12 advantage of that exemption, and if so, how many do you
13 think?

14 MR. WILLIAMSON: Yeah. I mean, we do have some
15 members that have their own cogeneration facilities on-site
16 providing. Those opportunities really are contingent upon
17 the thermal requirements of the manufacturing process.

18 Generally when cogeneration is built at an
19 industrial facility, it's because they have a need for
20 steam, and the electricity production is the ancillary
21 benefit associated with that cogeneration.

22 So there are some limited opportunities where
23 those companies that have that thermal need and have
24 installed that cogeneration would be able to take advantage
25 of that. But the bigger issue becomes, if in spite of all

1 the data that has shown that we are able to achieve these
2 carbon reductions without layering on another program such
3 as a RGGI program, if there's a decision to move that
4 forward, you really need to look at carbon offsets and
5 carbon credits provided to all of those energy-intensive
6 manufacturers and not just the ones with cogeneration.

7 REPRESENTATIVE COMMITTEE: One follow-up,
8 Mr. Chairman? Thank you.

9 To my previous comment about the opportunity I
10 see at the table here and in previous panels for some
11 really good conversation about how are we going to keep our
12 jobs and support our industries, entrepreneurs, and so on,
13 are there conversations already going on or is there
14 interest in conversations with the environmental community
15 to put heads together and find some of those solutions?

16 MR. SUNDAY: I think for us the short answer is
17 yes. As I mentioned, a lot of our businesses, the question
18 is, what can be done in sustainability, and our members are
19 asking those questions.

20 There are some environmental groups that would
21 say there is no role for a certain fuel mix in the future.
22 We don't agree with that. We think there's a role in the
23 future for every energy source, and then there has got to
24 be some technological and innovation improvements to come
25 along with that. But this is going to take partnership

1 among all stakeholders to meet our challenges, and we're
2 interested in that conversation.

3 MS. OYLER: I would say as well that I think
4 we're interested in working in Pennsylvania on Pennsylvania
5 improvements.

6 As I mentioned, rather than turning over this
7 issue to a large multistate bureaucracy, we would prefer to
8 work directly in Pennsylvania with Pennsylvania businesses
9 to find innovations like was mentioned, perhaps carbon
10 offsets for reforestation, those sorts of things, that I
11 think certainly we can work together, the business
12 community and the environmental community, on those types
13 of issues. We prefer to do that in Pennsylvania.

14 MAJORITY CHAIRMAN METCALFE: Thank you.

15 And based on your testimony and based on the
16 previous panels, as I know you were all here to observe
17 theirs and listen to theirs, based on the President's State
18 of the Union Address last night and based on his addressing
19 the economic forum, even in Europe, on the energy
20 independence that we have seen created here in
21 Pennsylvania, and coming from your perspective of
22 representing the business community, manufacturers and
23 industrial and small business and -- all of the testimony
24 we received today that has talked about not just the cost
25 of RGGI as far as being a new tax that will be levied on

1 energy producers, passed down, as you mentioned, I believe
2 a hidden tax to businesses. They have to absorb that new
3 cost while they're trying to operate on slim profit
4 margins. But as we have also heard from the labor unions
5 that were represented here today and from those of you that
6 represent across the business community that there's going
7 to be not just the direct impact of that new RGGI tax but
8 the indirect impact on loss of jobs, higher-cost energy to
9 consumers, and the leakage that will occur to where jobs
10 will move out of Pennsylvania into surrounding States that
11 aren't in RGGI -- Ohio, West Virginia, potentially two of
12 those -- along with industrial manufacturing jobs that will
13 likely locate next to the cracker facility that we have
14 being built in Beaver and the one that we hope to see built
15 in the northeast, and the report that was put out I think
16 between the Chamber, PMA talking about our energy-enabled
17 economy, talking about I believe the gas infrastructure
18 that could be developed, natural gas in Pennsylvania could
19 ultimately support five or six cracker plants across the
20 State, which you end up having a lot of manufacturing
21 businesses, I understand, locate close to those cracker
22 plants.

23 So can you comment amongst the four of you as we
24 close up on your thoughts on what Wolf's RGGI proposal
25 would do to our ability to be a leader in energy production

1 ultimately and how that would hamper what the President has
2 been talking about in such a positive manner, helping such
3 a strong state of our economy and a strong position in the
4 world as an energy leader, to even help Europe become more
5 energy independent from Russia and the Middle East.

6 Would anybody like to take that?

7 MR. SUNDAY: Sure. Thank you, Mr. Chairman.

8 I think it's tough to specifically answer that
9 question. As I mentioned, there's not a cap number, so we
10 don't know where we're starting from or how, if we jump in,
11 if we even jump into this, and we think there is a role for
12 the General Assembly to be engaged. We don't know where
13 we're going to start from or how fast we phase down.

14 Categorically, we have concerns about costs and
15 leakage and the future makeup of the State's manufacturing
16 energy sector. But I think as we mentioned, there's a lot
17 of questions that need answered before we make a decision
18 one way or the other on this.

19 MR. WILLIAMSON: Yeah. What I can speak to is
20 that I can tell you firsthand that the innovation that we
21 have seen in the energy production sector within the U.S.,
22 but more specifically here within Pennsylvania that's part
23 of this Marcellus Shale, has been one of the key
24 contributors that is allowing us to see a manufacturing, an
25 energy-intensive manufacturing resurgence within the U.S.

1 So we need to weigh that carefully between the policies
2 that we put in place.

3 As we indicated, we all have common goals around
4 the environment, but I also come from, you know,
5 generations where we worked, a family that worked within
6 the steel industry. And when those good-paying jobs and
7 the medical benefits from those jobs go away, that also has
8 a significant impact on quality of life.

9 So we need to be careful how many programs and
10 how much cost we layer on top of each other to achieve the
11 goals that we're seeking.

12 MAJORITY CHAIRMAN METCALFE: Thank you.

13 MR. MARRARA: I know I said it before in the
14 testimony, but steel is necessary for our infrastructure.
15 It's necessary for our national defense. It is a necessary
16 commodity that we use here in America and across the world.

17 Plastics are the same. They are vital, vital
18 commodities, and, I mean, for the health-care industry for
19 sanitary reasons.

20 I am confident in saying that those products that
21 are made here in Pennsylvania are probably made in the most
22 efficient and energy-saving way possible. At the point at
23 which we admit that those products are necessary to sustain
24 modern living, I would rather that that industrial activity
25 happens within our borders rather than in Russia or China.

1 I had the opportunity to travel to Asia this past
2 summer and actually had to lay over in Shanghai, China, and
3 in landing, you looked out the window and it's sepia tone,
4 no filter on your phone needed. It's absolutely -- I mean,
5 it's disgusting. And a lot of the products that, you know,
6 that that pollution is causing are products that we make
7 here, and we don't have that issue.

8 And for those reasons, I really think that the
9 more that we can do at a Federal level and at a State level
10 to incentivize that manufacturing activity to happen here,
11 the better and more sustainable our environment will be.

12 MAJORITY CHAIRMAN METCALFE: Thank you.

13 We have about a minute to get to the next
14 testifier.

15 MS. OYLER: Sure.

16 Yeah, I would agree with everything that has been
17 said here. Pennsylvania has become a world energy leader,
18 and that only benefits us. Costs have come down, emissions
19 have come down, and yet, we have still emerged as an energy
20 leader in the world, and I think that's an amazing success
21 story that we need to, you know, encourage.

22 And that has benefited the entire economy here in
23 Pennsylvania, from, you know, the workers in the plants all
24 the way to the small businesses on the corner store. We
25 need to preserve that. And it's like Mr. Marrara said, I

1 would much rather that energy be produced here with all the
2 benefits that come along with it in a much more
3 environmentally responsible way than elsewhere, so.

4 MAJORITY CHAIRMAN METCALFE: Thank you.

5 MS. OYLER: Just to close it out.

6 MAJORITY CHAIRMAN METCALFE: Thank you all.

7 MS. OYLER: Thank you.

8 MAJORITY CHAIRMAN METCALFE: Next, we have
9 Ms. Rachel Gleason, Executive Director of the Pennsylvania
10 Coal Alliance.

11 Thank you for joining us. You can begin when
12 you're ready, ma'am.

13 MS. GLEASON: Thank you for having me.

14 Chairman Metcalfe, Chairman Vitali, and Members
15 of the Committee, my name is Rachel Gleason, and I am the
16 Executive Director of the Pennsylvania Coal Alliance. I
17 appreciate the opportunity this morning to talk about the
18 Regional Greenhouse Gas Initiative and House Bill 2025.

19 The Pennsylvania Coal Alliance represents
20 bituminous coal operators in Pennsylvania, as well as other
21 companies whose businesses rely on coal mining and a strong
22 coal economy. Nationally, Pennsylvania is the third
23 largest coal-producing State, and PCA member companies
24 produce nearly 90 percent of the coal mined annually in
25 Pennsylvania, which totaled over 48 million tons in 2019.

1 Coal mining helps drive Pennsylvania's economy.
2 We support nearly 18,000 jobs, provide 4.1 billion annually
3 to the State's economy, and 7 billion in total output. The
4 Pennsylvania coal industry creates this economic value in
5 communities across Pennsylvania, with active mining
6 operations in 15 counties, 200 PCA member company locations
7 in 22 of Pennsylvania's counties, and over 2.5 billion in
8 property tax contributions. The industry accounts for
9 25 percent of the employment in some regions of the State,
10 and for every direct coal job, an additional two jobs are
11 created.

12 In 2018, coal as a fuel source for electricity
13 accounted for 58 percent of our total production. As the
14 Executive Director of the PCA, I have been charged by our
15 board to advocate for a State energy policy that promotes
16 free and fair markets and provides for a level playing
17 field for all generation sources.

18 Since Pennsylvania deregulated its electric
19 generation markets in 1996, 18 coal-fired electric
20 generating units have deactivated or converted to natural
21 gas, including Bruce Mansfield, a powerhouse at nearly
22 2500 megawatts, which shuttered its doors this past
23 November. One other coal-fired EGU is scheduled to end its
24 coal use by 2029. As a result, 11.4 gigawatts of coal
25 nameplate capacity has or is scheduled to go offline since

1 deregulation.

2 Pennsylvania will have five coal-fired EGUs
3 remaining. In 2018, these five EGUs consumed 8.4 million
4 tons of coal extracted by coal mining operations in
5 Pennsylvania. Overall, coal accounted for 20 percent of
6 the net electricity generated in the Commonwealth in 2018,
7 which is down significantly from the 48 percent just a
8 decade ago.

9 PCA member companies fully realize that the
10 electric power generation market has significantly
11 transformed this past decade, but remain committed to
12 working within this changing market to ensure that coal
13 remains an affordable, reliable, and resilient resource to
14 the grid. That said, PCA has serious concerns about
15 Governor Wolf's Executive Order directing DEP to develop
16 regulations joining Pennsylvania to RGGI.

17 Today, I think we have already established what
18 RGGI is and the premise behind RGGI, which is to tax fossil
19 fuel electric generators, collect revenue from that tax,
20 and then redistribute it to subsidize certain programs or,
21 in some cases, balance General Fund budgets. As we have
22 heard, it is more complex than that. Pennsylvania
23 participates in the PJM Interconnection, a competitive
24 regional transmission organization that manages the
25 electric grid for more than 65 million people in all or

1 part of 13 States plus DC.

2 Coal continues to play a significant role in
3 diversifying the generation portfolio within PJM and
4 comprised 29 percent of the electricity generated in 2018.
5 This is important, because most RGGI States do not
6 participate in PJM.

7 Not one of the States currently participating in
8 RGGI, including recently re-joined New Jersey, was an
9 electric generation exporter in 2018. In fact, every RGGI
10 State imported a portion of their electricity from non-RGGI
11 sources.

12 New York, the only RGGI State with electricity
13 consumption comparable to that of Pennsylvania's, imported
14 their electricity from Canada and Pennsylvania, where our
15 Homer City coal-fired electric generating unit has a direct
16 transmission line into New York State.

17 Maryland and Delaware, RGGI States that
18 participate in the PJM RTO, imported 30 percent and
19 53 percent of their electricity from other States in PJM,
20 including Pennsylvania, Ohio, and West Virginia.

21 In Pennsylvania, the top fossil fuel electric
22 generators who emit carbon dioxide, in order of intensity
23 per megawatt hour, are waste coal, coal, and natural gas.
24 As such, implementing RGGI in Pennsylvania will have
25 differing financial implications for each affected

1 generation unit, some higher than others based on a
2 megawatt-hour basis. That may result in the immediate
3 closure of certain electric power generators and would
4 create long-term, unfavorable economic challenges for
5 others.

6 Therefore, if Pennsylvania were to join RGGI or
7 develop a cap-and-tax program, it will also prop up fossil
8 fuel generation in other States. Electric power generators
9 in Ohio, West Virginia, and Pennsylvania all generate a
10 significant amount of electricity and compete against each
11 other in the PJM RTO. In fact, generators in Pennsylvania,
12 Ohio, and West Virginia accounted for 45 percent of the
13 installed capacity available in PJM.

14 Generation in Pennsylvania, including natural
15 gas, would be placed at a competitive disadvantage to
16 similar units in Ohio and West Virginia, which do not have
17 a tax. This scenario, referred to as "leakage," leads to
18 nonparticipating RGGI States emitting more carbon from
19 their EGUs as they increase generation to meet demand and
20 make up for Pennsylvania's lost generation. This is
21 precisely why former PA DEP Secretary Katie McGinty
22 concluded that RGGI is not a good fit for Pennsylvania.

23 And, Ohio and West Virginia do not participate in
24 the Ozone Transport Region. So their fossil fuel
25 generating units have less stringent emission controls on

1 those that are in Pennsylvania, which may increase actual
2 pollutants like particulate matter, nitrogen oxide, and
3 SO2.

4 The Pennsylvania Coal Alliance recently
5 commissioned a study from Energy Ventures Analysis to look
6 at the practical impact implementing RGGI in Pennsylvania
7 would have on the five remaining coal-fired power plants.
8 While this study pointed to a certain decline in closure of
9 coal-fired EGUs, it also determined that "PJM generators in
10 nearby states that do not participate in RGGI will gain an
11 advantage over Pennsylvania generators..." and "...coal
12 plant revenues in Ohio and West Virginia will increase by
13 an average of \$320 million per year as dispatch shifts...."

14 Establishing any cap-and-tax program on carbon
15 emissions in Pennsylvania comes with great risk that goes
16 beyond the survival of fossil fuel generation. The
17 economies of communities in Pennsylvania benefit greatly by
18 the presence of these EGUs and they also benefit from the
19 production of coal, which would be significantly impacted
20 with the inevitable closure of these generators.

21 Counties, school districts, and municipalities
22 receive millions of dollars in property tax revenues from
23 coal operators, and many of the people living in those
24 communities work at and support the mines. In Greene and
25 Washington Counties alone, nearly \$17 million in taxes are

1 paid by operators annually.

2 Further, taxing over 50 percent of Pennsylvania's
3 power generation will increase the cost of electricity,
4 which will inevitably be passed on to the ratepayers and
5 consumers through increased prices for goods. RGGI States'
6 retail electricity rates have risen as much as 27 percent
7 since 2009. And 2009 is when RGGI was born, not 2005 as
8 other people have, folks have indicated.

9 Rhode Island's has increased by 27 percent,
10 Vermont by 19.7, and Massachusetts by 18.7 percent. And
11 their average retail electric price in 2018 was 51 percent
12 higher than the retail prices in Pennsylvania.

13 Recently, the Ninth Circuit Court of Appeals
14 decided *Juliana v. United States*, where the U.S. Government
15 and various Cabinet-level departments were sued to stop the
16 permitting and authorizing the use of fossil fuels. In
17 deciding the case, the opinion the majority wrote: "...any
18 effective plan [to stop fossil fuel use and reduce GHGs]
19 would necessarily require a host of complex policy
20 decisions entrusted, for better or worse, to the wisdom and
21 discretion of the executive and legislative branches."
22 This decision echoes that of House Bill 2025.

23 Bottom line: RGGI is not about reducing carbon.
24 It's about money, generating revenue, while risking jobs,
25 economies, and tax bases, and only the General Assembly has

1 a constitutional role to consider the risks and potential
2 benefits associated with any tax.

3 The PCA applauds the efforts of Representatives
4 Struzzi, Oberlander, and Snyder and the 56 other sponsors
5 of House Bill 2025 who recognize the General Assembly's
6 exclusive role in major tax policy initiatives and in the
7 implementation of a program with so many far-reaching
8 consequences.

9 And I will be happy to take any questions.

10 MAJORITY CHAIRMAN METCALFE: Thank you.

11 We have time for one question from Representative
12 Vitali.

13 MINORITY CHAIRMAN VITALI: Thank you.

14 Most every speaker who testified here today had
15 an economic interest in either the burning of fossil fuels
16 or the building of fossil fuel plants. Not a single
17 speaker here today was testifying about RGGI, explaining
18 the need for it or explaining the need for climate change.
19 That's very unfortunate.

20 I don't really have a question for you. Thank
21 you.

22 MAJORITY CHAIRMAN METCALFE: Thank you for your
23 disrespectful way to ask and not ask a question,
24 Representative Vitali.

25 Yes, you told me that you wanted to ask a

1 question. I recognized you to ask a question. You burned
2 up the rest of our time with saying you really don't have a
3 question. It was very disrespectful to the process.

4 And the reason why you heard from people who are
5 impacted by RGGI is because these are people who are
6 impacted by RGGI. If we just bring people in that are some
7 of your friends and contributors who want to destroy the
8 fossil fuel industry totally and want us all going back to
9 horse and buggies, and they wouldn't be satisfied with
10 that, because like the Mayor of New York, they probably
11 wouldn't appreciate having too many horses around like he
12 doesn't appreciate cattle, which led into his Meatless
13 Mondays.

14 Thank you very much for joining us today. Thanks
15 for your testimony---

16 MS. GLEASON: Thank you.

17 MAJORITY CHAIRMAN METCALFE: ---and I look
18 forward to further discussions and interaction.

19 We appreciate all of the testifiers' testimony
20 today. And as I mentioned to one of our earlier panels,
21 the Committee did hear you on the impacts this is going to
22 cause to your members, to your communities, and to our
23 State. So thank you for being here today to speak up and
24 be heard, as we heard had not happened in other States from
25 anybody who was going to be impacted by RGGI when it was

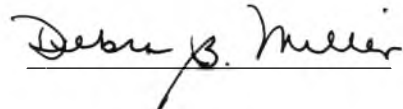

1 adopted in those States, but to create a new tax that will
2 not help the economy and it will not help all of you that
3 talked today. So thank you for being with us. We
4 appreciate it.

5 A motion to adjourn by Representative Schemel,
6 seconded by Representative Rapp. This meeting is
7 adjourned. Everyone have a great day.

8

9 (At 11:00 a.m., the public hearing adjourned.)

1 I hereby certify that the foregoing proceedings
2 are a true and accurate transcription produced from audio
3 on the said proceedings and that this is a correct
4 transcript of the same.
