MAJORITY SUBCOMMITTEE CHAIRMAN DIAMOND:

(Portion of audio missing) -- the Government Information Technology and Communication. That's a lot of words.

My name is Russ Diamond. I'm the Subcommittee Chair, and I want to thank Chairman Phillips-Hill of the Communication and Technology Committee for jointly hosting this hearing on SB 696, sponsored by Senator Dan Laughlin.

I would also like to express my thanks to all the members and testifiers today for attending the hearing. Please note that in addition to the three testifiers we have today, we also have received additional written testimony from John MacMillan, the Commonwealth's Chief Information Officer, the Office of Administration; as well as Brianna Petitti, Government Relations Associate at CCAP.

I look forward to hearing the dialogue on this important issue.

MAJORITY CHAIRWOMAN Phillips-Hill: Thank you, Representative Diamond.

If we could now, I'd like to start with

1 member introductions. If we could start with the
2 other gentleman from Lebanon County.

3 REPRESENTATIVE RYAN: I'm Representative
4 Frank Ryan, Lebanon County, 101st District.

5 Thank you.

6 REPRESENTATIVE MILLER: Brett Miller,
7 44th District, Lancaster County.

8 SENATOR DUSH: Cris Dush, Senate District
9 25, McKean, Potter, Tioga, Elk, Cameron, Clinton,
10 and Jefferson Counties, and part of Clearfield.

11 MINORITY SUBCOMMITTEE CHAIRMAN WEBSTER:
12 Good morning, everyone. I'm Joe Webster, and I
13 represent House District 150 in Montgomery
14 County.

15 Thank you.

16 MAJORITY CHAIRMAN GROVE: Seth Grove,
17 196th District, York County.

18 REPRESENTATIVE NELSON: Eric Nelson, 57th
19 District, Westmoreland County.

20 MAJORITY SUBCOMMITTEE CHAIRMAN DIAMOND:
21 And virtually, we have Representative Sanchez.

22 REPRESENTATIVE SANCHEZ: Good morning,
23 everybody.

24 Ben Sanchez from Montgomery County.

25 MAJORITY SUBCOMMITTEE CHAIRMAN DIAMOND:

1 I'd also like to mention that Representative
2 Webster is the Minority Subcommittee Chair.

3 Thank you for being with us.

4 MAJORITY CHAIRWOMAN Phillips-Hill: Thank
5 you, members, for those introductions.

6 I would like to turn it over to Senator
7 Dan Laughlin, prime sponsor of SB 696 to give a
8 few words about his legislation.

9 Senator Laughlin.

10 SENATOR LAUGHLIN: Thank you, Chairwoman.
11 Thank you, Chair Diamond.

12 I'll thank all the Senators and
13 Representatives for being here, as well, so --
14 any way, good morning. I'd like to thank the
15 House State Government Committee, Subcommittee on
16 Government Information, Technology, and
17 Communication, and also the Senate Communications
18 and Technology Committee for holding a hearing on
19 SB 696.

20 SB 696 updates the breach of personal
21 information notification act to require state
22 agencies victimized by a breach identifying
23 personally identifiable information to report the
24 incident to those affected within seven days. As
25 we are now all well aware, information security

1 is an endless battle. Accomplished hackers are
2 smart, and they are sophisticated when it comes
3 to technology. They enjoy the challenge of
4 matching wits with the technicians charged with
5 providing IT security for government corporations
6 and financial institutions.

7 And that certainly makes Pennsylvania
8 state government a big target for them, something
9 that was all too clear last year when Insight
10 Global, an independent state contractor,
11 acknowledged that they had mishandled sensitive
12 information that exposed COVID-19 contact tracing
13 data and the personal information of some 72,000
14 Pennsylvanians.

15 We have also had a data breach that has
16 been impacting many of our unemployment
17 compensation claimants, who had their bank
18 account information changed within their
19 accounts. This led to unemployment compensation
20 claims being paid out to unknown criminals. And
21 to date, the impact and timing of the data breach
22 is still unknown.

23 It is understandable that any agency
24 victimized by a data breach might be embarrassed
25 and reluctant to publicly report the incident,

1 but it is certainly much more important to
2 immediately inform the citizens about the theft
3 of their personal information, so that they can
4 take the steps to protect their own assets.

5 The Insight Global case and the
6 unemployment compensation situation are prime
7 examples of the need for the State to act quickly
8 to protect its citizens when a data breach
9 occurs. I am not suggesting that any of the
10 state government's IT systems are vulnerable to
11 cyber attack, but we all know that hackers are
12 relentless in their attempts to steal personal
13 and financial information.

14 And that's what makes the provisions of
15 SB 696 so vitally important. We can only hope
16 that the hard work of the State's IT
17 professionals will be effective in protecting our
18 systems, but we must be ready to immediately
19 respond in the event of a breach. This bill has
20 won overwhelming approval from the Senate, and I
21 look forward to working with my colleagues in the
22 House to get the measure to the Governor's desk.

23 So thank you for holding today's hearing
24 on this important piece of legislation, and I
25 look forward to hearing all the testimony being

1 presented today. And I'd like to add just one
2 other thing. I realize that our state agencies
3 try very hard -- and it's unfortunate that we
4 even need to run a bill like this, but quite
5 frankly, I it's -- I think it's needed more than
6 ever.

7 So thank you -- thank you all for holding
8 the hearing today.

9 MAJORITY CHAIRWOMAN PHILLIPS-HILL: Thank
10 you, Senator Laughlin.

11 And I would now like to turn it over to
12 our first testifier, Ken Hess. He is the Deputy
13 Secretary of Procurement at the Department of
14 General Services.

15 Mr. Hess.

16 DEPUTY SECRETARY HESS: Good morning,
17 Senator.

18 Chairs Grove and Webster, thank you for
19 inviting me. And my thanks to Senator Laughlin
20 for caring enough about the Commonwealth citizens
21 to put this bill forward. Usually when I come
22 before you, I am joined at the hip by CIO
23 MacMillan. And I do have his statement with me.
24 I'll just read a couple of excerpts from that, if
25 I may.

1 And I quote: In past sessions over the
2 past seven years, OA and the County Commissioners
3 Association of Pennsylvania, CCAP, have
4 collaborated to engage in discussions with
5 members of the General Assembly about SB 696 and
6 proposed amendments to the Act. OA remains open
7 to working with the Committees and the General
8 Assembly to enhance the Act with amendments that
9 OA and CCAP previously developed and proposed.

10 From OA's perspective, there is still one
11 very significant change to the Act that needs to
12 be made. A definition of, quote, determination
13 must be included as any -- in any legislation
14 amending the Act. Determination should be
15 defined as the, quote, the final verification
16 following an investigation that a breach of
17 personal information has occurred.

18 It is vital that IT professionals have
19 the tools and time to verify that unauthorized
20 access and acquisition to any personally
21 identifiable information -- and at this point,
22 I'm just going to stipulate PII and PHI as the
23 same for all intents and purposes -- has in fact
24 occurred.

25 we worked with CCAP on the specific

1 wording of that definition and strongly urged
2 that it be included in the amendments to the Act.
3 In addition, OA recommends two specific changes
4 to terminology in the current draft of the bill
5 that would require state agency contractors and
6 state agencies under the Governor's jurisdiction
7 to provide notice to the chief information
8 security officer of the State agency or OA
9 respectively, upon the discovery of a possible
10 breach.

11 This trigger for action, if an entity
12 suspects improper access into a system, allows
13 the effective State agency and OA to quickly
14 assess and investigate the situation, while
15 offering assistance to contractors and State
16 agencies where appropriate early on. And I
17 gather that, as part of his testimony, he
18 provided a draft amendment that would make that
19 adjustment.

20 Finally, in addition, the Department of
21 General Services has estimated that changes
22 required by the bill to current contracts would
23 have a significant fiscal impact on State
24 agencies. Also, according to DGS, future
25 contract costs would be increased to comply with

1 the requirements of the bill. Blah, blah, blah.

2 We look forward to continuing to work
3 with the Committees on SB 696 to update the
4 current Act. The goal of the legislation should
5 be to ensure in a non-partisan manner that
6 protections are in place for our citizens in the
7 event that an actual data breach occurs.

8 Okay. And I -- I wholeheartedly agree
9 with CIO MacMillan's statements. And we
10 certainly agree -- and he supports the assessment
11 that I'm about to share with you about the
12 potential costs and other impacts that I believe
13 are unintentional, perhaps, as a -- that go to
14 the specific language that was used. So allow me
15 to explain.

16 First of all, DGS recognizes the
17 tremendous importance of protecting the personal
18 information of the citizens of the Commonwealth.
19 The Department agrees with the legislature that
20 breaches of personal information are a concern
21 and not to be taken lightly. However, the
22 language in the current bill gives us pause when
23 considering the scope and the intended time,
24 cost, and resources that would be required by the
25 most literal interpretation of the provisions.

1 We are confident that this hearing will
2 provide a forum to mutually explore and to close
3 the gap between the legislative intent and to
4 protect personal -- to protect personal
5 information and procurement policy -- wow, that's
6 a mouthful -- that covers a myriad of contracts
7 which contain no PII or PHI of any kind.

8 In summary, we believe the bill is
9 unintentionally overly prescriptive and that it
10 applies to all new and existing State contracts
11 for both goods and services, many of which
12 involve no PII, PHI and are irrelevant to the
13 intent and purpose of the bill. The Department
14 believes that SB 696 can be much more effective
15 and efficient by designating a spend threshold
16 and not encumber COPA administrators by including
17 PCARD [phonetic] and other small purchases of
18 goods and services in screening an amendment as
19 required by the bill.

20 The Department is concerned with the cost
21 of resources that will be required as written,
22 given the requirements for all new and existing
23 contracts. Based on our data, it's determined it
24 would cost the Commonwealth approximately \$84
25 million dollars to renegotiate the total number

1 of active contracts and purchase orders.
2 Further, there is the possibility of suppliers
3 seeking to terminate, rather than accept
4 additional responsibilities.

5 Representative Ryan, as I recall, you
6 have a military contracting background, and you
7 are very sensitive and aware of all of the
8 conditions that we put on our suppliers and many
9 times what that does in terms of their pulling
10 back, lack of participation, increased costs,
11 longer time, et cetera.

12 The Department is already seeing
13 significant resistance to higher and higher
14 liability coverage driven by exceedingly rare but
15 potentially catastrophic data loss. Insurers are
16 unwilling to provide coverage to suppliers that
17 seek astronomical or unlimited loss protection.
18 Our supplier pools are receding, owing to such
19 onerous conditions and limiting entry for
20 developing providers.

21 Further, there's the financial impact it
22 will have on agency budgets and on local
23 governments, municipalities, school districts,
24 universities, et cetera. There is also the
25 matter of a significant duplication of effort.

1 Our standard -- and I underscore standard -- IT
2 terms and conditions, which I have in my
3 testimony as Attachment A, already stipulate
4 comprehensive provisions for data protection,
5 encryption, attestation of compliance,
6 notification of breach, et cetera, at both the
7 corporate and at the associate level.

8 And I cited a number of sections for you
9 to actually see the language that is attendant to
10 our IT contracts. Further, in Exhibit B, those
11 are our standard -- I'm sorry Attachment B is our
12 standard non-IT terms and conditions. And while
13 not as specific as the IT terms and conditions,
14 there are umbrella stipulations with regards to
15 background check, confidentiality, sensitive
16 information, HIPAA compliance, insurance and so
17 on.

18 Given that these preexisting protections
19 are already a part of the applicable contracts,
20 we respectfully submit that resources needed
21 could be put to better use. So our
22 recommendations: at a minimum, the Department
23 recommends that SB 696, in light of existing
24 contract terms, not apply retroactively.
25 Secondly, that it be limited in scope to service

1 only, not goods, not construction contracts,
2 which can reasonably be identified as requiring
3 access to -- excuse me --- PII or PHI data and
4 include a threshold for contracts it does apply
5 to.

6 For these reasons, the Department of
7 General Services and the administration opposes
8 the bill as it is currently written. But I want
9 to underscore that we recognize the validity of
10 the intent, and I believe, as John said earlier,
11 that we can work together to bridge that gap and
12 make this a very useful piece of legislation.

13 Finally, I would say, you know, I've read
14 some of the testimony on folks that will follow
15 me, and they indicate -- and I think rightly --
16 that the law can't keep up with technology. And
17 I think that's a very valid point.

18 This administration has adapted and
19 continues to update and refine an entire suite of
20 security policies and the attendant contract
21 terms and conditions. So just allow me to share
22 with you -- I'm going way back here. And this is
23 in your -- in my testimony.

24 These are the security policies that we
25 currently have in place and attendant to our

1 terms and conditions. So there's IT, SEC-000,
2 information security policy, Internet accessible
3 proxy servers and services policies, enterprise
4 security auditing and monitoring, enterprise web
5 application firewall policy, Commonwealth of
6 Pennsylvania electronic signature policy, minimum
7 standards for IDs, passwords, and multifactor
8 authentication, enterprise e-mail inscription
9 [SIC] -- encryption policy, minimum contractor
10 background check policy, virtual private network
11 standards, enterprise policy and software
12 standards for agency firewalls, data cleansing
13 policy, COPA policy for credit card use for
14 E-government, policy and provisions for
15 protecting Commonwealth electronic data, security
16 information and event management policy, IT
17 security assessment and testing policy, security
18 incident reporting policy, proper use and
19 disclosure of personally identifiable
20 information, physical security policy for IT
21 resources, encryption standards -- and I'll come
22 back to that one in a second -- enterprise data
23 loss, compliance standards, enterprise firewall
24 ruleset, Commonwealth data center privileged user
25 policy, and keystone login and identity proofing.

1 So as I say, a complete suite of requirements and
2 what I believe are well thought out and
3 up-to-date prescriptions for our contracts
4 involving IT services.

5 So I said I would come back to the
6 encryption standards. Because the bill
7 specifically calls out encryption, I just want to
8 give you an example of trying to keep up with
9 technology. And so here's the IT technology
10 policy for encryption, SCO 31 [phonetic]. I'm
11 not even going to try to get into the, you know,
12 the technical aspects of the various types of
13 encryption and bits and number of times and
14 things like that. But what interested me was
15 that this was written originally in 2009, and
16 listen to the number of revisions that have
17 occurred to this that have been necessary to keep
18 up with technology: 2014, 2015, 2016, 2017,
19 2018, 2020, 2021.

20 So again, imagine you having to prescribe
21 legislation at that pace. It -- I think that we
22 can reach an acceptable middle ground that
23 provides you and the Commonwealth citizens with
24 the assurances, you know, from an umbrella point
25 of view, and then allows us to continue to adapt

1 and adopt best practices as is required to
2 maintain that security.

3 Thank you.

4 MAJORITY CHAIRWOMAN PHILLIPS-HILL: Thank
5 you, Deputy Secretary.

6 I appreciate those remarks. We received
7 the 130-page testimony last night at 6:00 p.m.,
8 which we shared with all of our colleagues here
9 and those online. And I'm sure that they will,
10 you know, in the next couple of weeks have plenty
11 of time as we work through the budget to take it
12 all in and begin to digest it.

13 DEPUTY SECRETARY HESS: Great. Thank
14 you.

15 MAJORITY CHAIRWOMAN PHILLIPS-HILL: And
16 it is interesting to note Pennsylvania is one of
17 only two states that since 2009 hasn't updated
18 its laws with regard to data privacy.

19 DEPUTY SECRETARY HESS: Yeah.

20 MAJORITY CHAIRWOMAN PHILLIPS-HILL: So I
21 think it's really a very timely conversation for
22 us to be engaging in.

23 One of the things I wanted to talk to you
24 about before we turn it over to colleagues for
25 questions --

1 DEPUTY SECRETARY HESS: Sure.

2 MAJORITY CHAIRWOMAN PHILLIPS-HILL: -- if
3 I could, was the fiscal cost that your testimony
4 today provided, which was contrary to what the
5 agency provided to the Senate Appropriations
6 Committee for its fiscal note. So in that fiscal
7 note that we received, the Office of
8 Administration had indicated that the provisions
9 in the bill, for informational purposes, they
10 anticipated that OA's operating budget in the
11 fiscal year would be impacted by 9 --
12 approximately \$9.6 million. Your testimony here
13 today has greatly inflated that number.

14 Can you talk about how in less than a
15 year you've come to those numbers?

16 DEPUTY SECRETARY HESS: Sure. I can't
17 speak for John. I'll do my best to surmise or
18 share with you what my analysis is.

19 I think that, you know, when the
20 definition was added of contractor of all goods
21 and services --

22 MAJORITY CHAIRWOMAN PHILLIPS-HILL: Well,
23 that definition was in the legislation when it
24 passed out of the Senate. Because remember --

25 DEPUTY SECRETARY HESS: Right.

1 MAJORITY CHAIRWOMAN PHILLIPS-HILL: -- we
2 don't put fiscal notes onto the legislation until
3 it --

4 DEPUTY SECRETARY: Right.

5 MAJORITY CHAIRWOMAN PHILLIPS-HILL: --
6 gets through Appropriations and through the
7 Senate, so yeah.

8 DEPUTY SECRETARY HESS: I understand. At
9 any rate, I believe that the Office of
10 Administration looked at this in an IT centric,
11 you know, existing, what does this mean for our
12 existing relationships, our existing contracts?
13 I looked at it from the alternative point of
14 view, which is this is all goods and services.

15 And so what it appears is that either
16 the, you know, I'm not sure whether it's intended
17 or not, but what the end result of the language
18 that's in the bill is, is that we're being asked
19 to go back and renegotiate contracts for rock
20 salt to put in provisions of PII and encryption.
21 And I don't know that there's any value, quite
22 honestly, in so doing. But to comply with the
23 exact language, that's what would be required.

24 And so that is where the big difference
25 came in the -- in the estimates. I think it --

1 I believe that's easily resolved. And as stated
2 in my testimony, you know, and with John, we are
3 certainly willing to explore those gaps and to
4 understand what the fullest, you know, the true
5 intentions are and to see that the legislation
6 mirrors that.

7 MAJORITY CHAIRWOMAN PHILLIPS-HILL: well,
8 I appreciate that explanation. I think it's
9 rather disturbing that that information is not
10 provided in a timely fashion to the Senate
11 Appropriations Committee. Obviously, that is a
12 conversation we're going to have to have in the
13 future, but appreciate the testimony here today.

14 I'd like to turn it over to the
15 Subcommittee Chairman, Representative Diamond,
16 for any questions.

17 MAJORITY SUBCOMMITTEE CHAIRMAN DIAMOND:
18 Sure.

19 Deputy Secretary Hess, your testimony
20 seems to indicate that implementation of SB 696
21 for your agency would involve, among other
22 things, a duplication of effort. And you
23 provided us with several attachments relating to
24 your standard IT terms and conditions.

25 Can you explain to us briefly three

1 things. A, what are the duties required by your
2 agency under the current breach of Personal
3 Information Notification Act?

4 B, have you ever had to put these duties
5 into practice due to a breach? And if so, what
6 did you learn from that experience?

7 And C, what kind of challenges do you
8 face based on the current law? Are there changes
9 you would like to see made to the law as a
10 result? And if so, what are those changes?

11 DEPUTY SECRETARY HESS: That's a
12 mouthful. Okay.

13 So our current IT terms and conditions
14 and our standard terms and conditions do contain
15 language that require notification and disclosure
16 of breaches. And in fact, that is one thing that
17 I think that we can -- that we can level set. So
18 for example, in our IT terms and conditions, we
19 say that we want notification within an hour of
20 discovery. That, I believe, is really important
21 and critical and also happens to agree with what
22 CIO MacMillan emphasizes as the key priority, so
23 that we can provide the resources at that time to
24 analyze and understand the scope and the scale
25 and, perhaps, the -- whether it was a negligent

1 or whether it was a harmful actor.

2 And of course, that takes two completely
3 different paths. And as you're aware, the
4 current language has law enforcement provisions
5 in it. So those are our current duties. We have
6 those protections in place on both IT and on IT
7 contract terms and conditions.

8 Let's see, have we had to exercise
9 mitigation efforts due to -- what is it called,
10 beach with an r -- data loss? Yes. One of the
11 -- we have in place a contingent contract for
12 financial monitoring and correction of personal
13 financial information and accounts if it is
14 something that is required as a result of a
15 Commonwealth loss. If it's caused by a
16 contractor, of course we have indemnification
17 built into our contract terms and conditions.
18 And so it is incumbent upon the supplier to
19 provide those mitigations.

20 What do we learn from these things?
21 Well, I know what I learned. Senator Laughlin
22 mentioned Insight Global, for example. And I'm
23 not being the IT person. I'm looking at this
24 strictly from a contracting point of view, so I
25 can't -- I can't say about the technology things.

1 But what I learned is that, yes, indeed
2 this is a continuous improvement opportunity that
3 we can't stop every single potential infraction
4 and that, you know, what do you do about somebody
5 that makes a mistake, you know, that an employee
6 of a contractor or a subcontractor simply makes a
7 mistake, not of any ill intent. And so I think
8 that we have to scale our approaches accordingly.

9 So that's what -- that's one thing that I
10 would say that I've taken away from this.

11 They're not all, you know, folks in Ethiopia or
12 some place trying to break into our systems in
13 the dead of night.

14 Challenges, I will -- of the current
15 law -- I personally like the current law. I
16 think that the notification aspect, I get it,
17 right. I got my own credit cards and bank
18 account information and health information, and I
19 would certainly want to know within a reasonable
20 amount of time whether that has been made public.
21 So I -- I get that, and I agree with it. But
22 what I like about the current law is it provides
23 the true experts, you know, the flexibility to
24 develop and to maintain policies that keep pace
25 with the marketplace.

1 MAJORITY SUBCOMMITTEE CHAIRMAN DIAMOND:
2 So I do want to recognize that Representative
3 Howard has joined us virtually.

4 Back to my original question, maybe put
5 in layman's terms for the folks watching, again,
6 let's go back to this duplication of effort.

7 DEPUTY SECRETARY HESS: Sure.

8 MAJORITY SUBCOMMITTEE CHAIRMAN DIAMOND:
9 So why would it be a duplication, rather than
10 just an incorporation of, you know, the language
11 of SB 696 into what you already do?

12 why would it be duplication?

13 DEPUTY SECRETARY HESS: So there's over
14 10,000 contracts and purchase orders in the pool
15 that we would have to address. Some of them have
16 these provisions that I described to you already
17 in them. The question is whether or not they
18 rise to the level of protection that you are
19 seeking.

20 If they don't, then we're going to have
21 to open negotiations with those folks. And then
22 there are those that don't have those terms and
23 conditions in them, and we're going to have to
24 talk to those folks about incorporating them.

25 And quite honestly, any time you pick up

1 the phone and call a supplier to say, I'm
2 changing your responsibilities, what do you think
3 his response is to me?

4 MAJORITY SUBCOMMITTEE CHAIRMAN DIAMOND:
5 So prospectively speaking then, I mean, we are
6 already broaching the topic of the legislative
7 process may not be able to keep up with
8 technology. So then equally, would you not then
9 issue contracts based on that same premise that
10 if technology changes and there's, you know -- is
11 that already in the contracts you offer or is
12 there an improvement you can do that way?

13 DEPUTY SECRETARY HESS: So like for
14 example, there are NIST standards, National
15 Institute of Standards and Technology that are
16 called out in our, among many others that are
17 called out. And so if NIST, for example, changes
18 a practice or adds a new condition, our suppliers
19 are bound to adopt those. Now, we're on the hook
20 if there are -- if there are additional costs
21 related to that, but they cannot say no.

22 MAJORITY SUBCOMMITTEE CHAIRMAN DIAMOND:
23 Okay. And then just one final point. I mean,
24 you had talked about, you know, what do you do
25 when somebody makes just an honest mistake.

1 DEPUTY SECRETARY HESS: Yeah.

2 MAJORITY SUBCOMMITTEE CHAIRMAN DIAMOND:
3 I would -- I would just emphasize that it doesn't
4 matter if it's an intentional breach into a
5 system or a mistake. For those 72,000 people,
6 the harm was the same. It doesn't matter whether
7 it was caused by a mistake or an intentional
8 breach.

9 So Senator, other questions?

10 MAJORITY CHAIRWOMAN PHILLIPS-HILL: Thank
11 you, Representative Diamond.

12 I'd like to recognize Representative
13 Nelson for questions.

14 REPRESENTATIVE NELSON: Thank you, Madam
15 Chair.

16 And thank you for your testimony, Deputy
17 Secretary. At least in my understanding of the
18 prime driver for this bill is the absence of
19 notification that has occurred for citizens that
20 have experienced a breach. A struggle I have
21 with the retroactive enforcement, it definitely
22 is much more convenient from a contract
23 perspective, but existing contracts where we have
24 seen government intentionally not notify
25 citizens, how would you recommend we approach

1 that gap?

2 I mean, legally, it's a shame that we
3 have to pass a law to require government notify
4 the citizens, but if we would eliminate that
5 retroactive, we're talking millions of citizens
6 that would potentially be impacted and would then
7 get the green light not to be notified.

8 How would you suggest we bridge that gap?

9 DEPUTY SECRETARY HESS: I think that most
10 -- I will put most --

11 REPRESENTATIVE NELSON: And I know you're
12 a contract guy.

13 DEPUTY SECRETARY HESS: Yeah. Most of
14 our contracts say that notifications should take
15 place within a reasonable period of time. And I
16 think that sort of harkens back to the original
17 law, as well. And again, I -- you know, whenever
18 you put a firm fixed number on something, it
19 always seems like there are exceptions that you
20 beat your head against the wall.

21 REPRESENTATIVE NELSON: Let's build on
22 the standard. We'll use the example of
23 unemployment --

24 DEPUTY SECRETARY HESS: Sure.

25 REPRESENTATIVE NELSON: -- that was used

1 earlier. Brand new system, \$30 million,
2 horrendous security controls, which resulted in
3 the breach of thousands of citizens. And after
4 multiple hearings, the Department of Labor and
5 Industry still refused to notify those citizens.
6 Bank accounts were changed. Information was
7 hacked. A pretty substantial hack. But it was
8 government who chose, not the contract itself,
9 but the actual administration, chose not to
10 notify citizens.

11 So I recognize that's one step outside of
12 the contract language --

13 DEPUTY SECRETARY HESS: Yeah.

14 REPRESENTATIVE NELSON: But without a
15 bill requiring that notification, how will people
16 know that their medical information was taken or
17 their bank accounts were even changed?

18 DEPUTY SECRETARY HESS: I got to say -- I
19 will say two things. First of all, I am not
20 qualified to answer that. I am a contract guy,
21 you know, not -- unemployment insurance is not my
22 beat. So I apologize, but that's just the simple
23 truth.

24 I am aware, however, that L&I took steps,
25 right, because I am the contract guy. I saw a

1 very quick move to secure an agreement with a
2 firm called ID.me. ID.me deals with the simple,
3 can I prove who I am on the other side of this
4 phone. And again, I'm not the technology guy,
5 but it seems as though, from where I'm sitting,
6 supplemental efforts were taken to try to bolster
7 the verification to be more proactive than
8 reactive.

9 Now, maybe that's after the cow left the
10 barn, but --

11 REPRESENTATIVE NELSON: Now, your
12 testimony -- and it was a gracious step for the
13 Department to provide, you know, a higher level
14 of protection for citizens that would proactively
15 provide, but the citizens were never notified and
16 I realize we may differ there. One question
17 about penalties.

18 You know, a testifier, you know, a little
19 bit later today is, you know, talking about
20 there's an absence for penalties for covering up
21 a breach. What are your thoughts on
22 strengthening that? I mean, credit to the COVID
23 company. They did step up to the plate and say,
24 hey, we had a breach. At that time, they could
25 have looked the other way. Accountability for

1 intentional, you know, nondisclosure.

2 DEPUTY SECRETARY HESS: Right. Well,
3 I'll say this much.

4 First of all, from my review of Insight
5 Global, they did have the protections in place
6 that, you know, I think you're right -- I think
7 the supplier stepped up and did the honorable and
8 right things under those circumstances, as far as
9 I know, from being, you know, an outsider looking
10 in.

11 I was very pleased to see that we had the
12 protections in place in the contract if we would
13 have had to force them to do that. But
14 fortunately, it appears as though our screening
15 process -- and that's a big part of this -- got
16 us a partner that is responsive and responsible
17 and did do the right things.

18 And on the backside is the insurance.
19 Right. I think I mentioned in my testimony that
20 insurance is a big part of this. And let's see
21 here if I can lay my fingers on it really
22 quickly. There are all sorts of insurance
23 requirements attendant to IT contracts. And
24 cyber security is one of them. I -- it will take
25 me about five minutes to probably find it in this

1 100-page document, but you have it. And I think
2 that is the other part.

3 what does concern us though is that
4 seriously when we are asked to negotiate a
5 contract with unlimited liability coverage, that
6 is just a non-starter. We cannot get folks to
7 compete for contracts with those kinds of --
8 those kinds of protections.

9 REPRESENTATIVE NELSON: Thank you.

10 Thank you, Mr. Chair.

11 MAJORITY CHAIRWOMAN PHILLIPS-HILL:

12 Deputy Secretary, before I recognize the Chairman
13 of the House State Government Committee, I need
14 to make this point.

15 DEPUTY SECRETARY HESS: Yes, ma'am.

16 MAJORITY CHAIRWOMAN PHILLIPS-HILL: And
17 that is that the Insight Global situation took
18 care of itself not because of that contract, but
19 because the news media broke the story. That's
20 what happened. I don't believe that anything
21 would have been resolved had it not been for
22 cracker jack reporters who put this on our plate.
23 Timely notification to people means that they
24 don't have to learn about their data being
25 breached on the evening news.

1 So with that, I'd like to turn it over to
2 the gentleman from York County, Representative
3 Grove.

4 MAJORITY CHAIRMAN GROVE: Thank you very
5 much.

6 with your discussion with Chairman
7 Diamond, you had mentioned that like if a Federal
8 law would change like NIST --

9 DEPUTY SECRETARY HESS: Yeah.

10 MAJORITY CHAIRMAN GROVE: -- it would be
11 automatically updated. So within your contract,
12 you have -- let me see a good section to pull up.

13 DEPUTY SECRETARY HESS: Welcome to my
14 world.

15 MAJORITY CHAIRMAN GROVE: You have a
16 section with -- here we go, information
17 technology product policies general. The
18 contractor shall comply with the IT standards and
19 policies issued by the Governor's Office,
20 Administration Office of Information and
21 Technology, including accessibility standard
22 sets, IT policy, accessibility -- contractors
23 shall ensure that services and supplies procured
24 under the contract apply with the applicable
25 standards.

1 In the event that such standards change
2 during the contract's permanence and the
3 Commonwealth requests that contractors comply
4 with the changes -- changed standard that any
5 incremental costs incurred by the contractor
6 comply with such changes shall be paid for
7 pursuant to change order to the contract.

8 DEPUTY SECRETARY HESS: Correct.

9 MAJORITY CHAIRMAN GROVE: Now, that is a
10 basically admin policy you put specific language
11 with. Like on page 29 of your contract, it has
12 workers' compensation insurance for all the
13 contractors, employees, and those of the
14 contractors engaged in performing services in
15 accordance with the Workers' Compensation Act.

16 If we would go back and change the
17 workers' Compensation Act --

18 DEPUTY SECRETARY HESS: Right.

19 MAJORITY CHAIRMAN GROVE: -- would you
20 have to go back and change these contracts or
21 it's just applied?

22 DEPUTY SECRETARY HESS: We would have to
23 look at the specific language in that clause. So
24 I can't say that sitting here.

25 MAJORITY CHAIRMAN GROVE: Okay. Because

1 when I look at -- now, that's page 29.

2 On page 28, we do have a data breach or a
3 loss section. And it says, a contractor shall
4 comply with all applicable data protection, data
5 security, data privacy, and data breach
6 notification laws, including but not limited to
7 the Breach of Personal Information Notification
8 Act of December 22, 2005, P.L. 495, No. 94 as
9 amended.

10 So that -- the law we're amending is
11 applicable to that.

12 DEPUTY SECRETARY HESS: That's correct.

13 MAJORITY CHAIRMAN GROVE: So all your IT
14 contracts, if we change the law, are
15 automatically updated with that because you
16 already have that in your IT contracts, correct?

17 DEPUTY SECRETARY HESS: Right. So then
18 the phone would start ringing, possibly,
19 depending on the language in the contract, saying
20 hey, we just saw that the law was changed. Let's
21 talk about amending the contract. And this is
22 what additional costs or additional, you know,
23 whether they'd be one-time, I have to now buy
24 encryption software, or you know, that it's a
25 run-rate type of increase based on a service that

1 they provide over and over continually.

2 MAJORITY CHAIRMAN GROVE: Right. But
3 within your contract, you also have -- I will say
4 the catch-all clauses.

5 DEPUTY SECRETARY HESS: Yeah.

6 MAJORITY CHAIRMAN GROVE: You have
7 boilerplate, right?

8 DEPUTY SECRETARY HESS: Yeah.

9 MAJORITY CHAIRMAN GROVE: At any time you
10 can cancel a contract --

11 DEPUTY SECRETARY HESS: Correct.

12 MAJORITY CHAIRMAN GROVE: -- correct?
13 You can say, all right, 30 day notice.

14 DEPUTY SECRETARY HESS: Sure.

15 MAJORITY CHAIRMAN GROVE: You don't like
16 it, go pound sand, right?

17 DEPUTY SECRETARY HESS: Sure.

18 MAJORITY CHAIRMAN GROVE: Though you
19 could come back and say to your contractors, we
20 care more about protecting personal
21 identification of our citizens because that's
22 what we have.

23 DEPUTY SECRETARY HESS: Sure.

24 MAJORITY CHAIRMAN GROVE: I mean, could
25 you imagine if someone got ahold of the

1 Department of Revenue's data, Social Security
2 number, bank account number, names, whole nine
3 yards. Probably if they file online, there's
4 probably a password.

5 So now I have a password that you use. I
6 have your name. I have your address, possibly
7 your signatures. I have everything I need to
8 destroy your life, and there's nothing you can do
9 about it because if I sign up for a credit card,
10 is this your signature, Mr. Grove? Well, I --
11 right? You have everything you need.

12 So I don't know why a company would want
13 to ensure that people aren't protected or from a
14 government with all that information we house.
15 And that's just one agency, one agency, on top of
16 a multitude of others. So I mean, you have
17 boilerplate languages in here. I'm trying to
18 pull it up here.

19 You know, termination, Commonwealth may
20 terminate the contract or purchase order issued
21 against the contract in whole or in part without
22 cause, no cause. See you later, right?

23 DEPUTY SECRETARY HESS: Yes.

24 MAJORITY CHAIRMAN GROVE: So again, I
25 don't -- going back to your fiscal note, I -- I'm

1 not buying \$84 million. I'm not buying hiring
2 over 100 attorneys. I'm not buying any of that
3 stuff. I'm absolutely not.

4 You know, maybe you have an argument with
5 salt. I will give you that, but with these IT
6 contracts, I do not see the need for the
7 administration, DGS, or OA hiring hundreds of
8 people for compliance with something that's
9 already built into your contract. So I'm -- just
10 from my perspective, I'm not buying the fiscal
11 note.

12 I just looked on the Budget Office, did
13 you work with comptroller's office on that?

14 DEPUTY SECRETARY HESS: Not yet, no.

15 MAJORITY CHAIRMAN GROVE: Not yet. So
16 Budget Office doesn't even have a fiscal note on
17 this.

18 DEPUTY SECRETARY HESS: Right.

19 MAJORITY CHAIRMAN GROVE: And they have
20 bills that are still on second consideration in
21 the House, let alone this major, I think some
22 landmark legislation by the good Senator, to try
23 to protect us. And you know, citizens are tired
24 of data breaches. They don't trust us. They
25 don't trust giving out their information.

1 So we need to do everything we can to
2 protect citizens from data breaches. This is a
3 good trust mechanism to say we take this
4 seriously. I just -- I find the fiscal note or
5 the fiscal implications of your testimony highly
6 inaccurate. I would suggest you work with your
7 comptroller and get a better capture on that,
8 particularly since most of your IT contracts
9 already have this in. It's there. We know it's
10 in there.

11 So that's all I have. Thank you.

12 DEPUTY SECRETARY HESS: If I may --

13 MAJORITY CHAIRWOMAN PHILLIPS-HILL:

14 Thank you, Chairman Grove.

15 DEPUTY SECRETARY HESS: -- one of the
16 things about canceling contracts is you need to
17 have somebody standing ready to take on that
18 responsibility, right? And so I would not say
19 especially in the case of complex IT or somebody
20 that's dealing with all of the Department of
21 Revenue's data that you would willy-nilly in 30
22 days cancel a contract because having somebody
23 waiting in the wings and ready to pick up that
24 awesome responsibility is not available on every
25 street corner.

1 MAJORITY CHAIRMAN GROVE: Well, I know
2 one thing. Having taken over as Chairman of this
3 Committee, I meet with IT people all the time,
4 contractors and vendors. For every vendor you
5 have, there's 10 other vendors that can do the
6 same job.

7 Even as Representative Nelson was
8 bringing up our Labor and Industry issues with
9 unemployment compensation, I met with a vendor
10 who actually could probably do a better job than
11 what IT has now on the front end of it. But
12 Labor and Industry is not openly bidding the
13 Labor and Industry IT security software. They
14 did a closed bid under emergency procurement,
15 which I think maybe Representative Ortitay might
16 want to know about.

17 So I mean, we're tired of it. I'm just
18 telling you, we're tired of it. Our citizens are
19 tired of it. We need fixes. And I think the
20 three-bill package that the Senate sent over to
21 the House is a great fix. I know we have two in
22 the State Government Committee, one is in --

23 MAJORITY CHAIRWOMAN PHILLIPS-HILL:
24 Judiciary.

25 MAJORITY CHAIRMAN GROVE: Judiciary. And

1 that's what we're hearing from the residents. We
2 talk to them. We talk to citizens every day,
3 whether we like it or not. It's part of the job,
4 right. And they are tired of it. They want
5 trust. They want that insurance that when they
6 send their personal information -- Representative
7 Diamond here just had a great conversation with
8 the Department of State a few weeks ago on just
9 the Department pulling personal information from
10 other State agencies.

11 People don't like that either because
12 they're trusting your agency. I didn't give my
13 data to these other agencies to use for their own
14 tools. So that's what we're dealing with out in
15 the public, and that's what these bills are
16 trying to get at and fix, and I think through a
17 very good way.

18 Now, obviously, we're always willing to
19 work with the Department, but I just -- I'm not
20 buying \$84 million with 300 new employees. I'm
21 not buying that, particularly since Budget Office
22 hasn't weighed in on that. And I'm not buying
23 that it's going to take a big leg work to change
24 a contract that already has a state law built
25 into it.

1 So thank you.

2 MAJORITY CHAIRWOMAN PHILLIPS-HILL: Thank
3 you, Chairman Grove.

4 Representative Webster.

5 MINORITY SUBCOMMITTEE CHAIRMAN WEBSTER:
6 Thank you, Chairwoman.

7 And I'm hopefully not just changing the
8 total scope of our discussion this morning. I
9 want to make a couple of comments, some of which
10 I may sound like Chairman Grove a little bit in
11 terms of the expectations of how we find some
12 level of excellence around our security within
13 the Commonwealth and across all the agencies.
14 Then also, thinking through all of the
15 ramifications, I guess I'd start with pointing
16 out -- and this is a little bit off the bill
17 itself, but any organization with the scale and
18 scope of the business operations of the
19 Commonwealth of Pennsylvania would have a chief
20 information security officer and a cyber
21 operation center and you know.

22 So while I would agree with Chairman
23 Grove on a lot of the internal things we have to
24 do to be better at protecting our own data and
25 interactions, I might disagree with the amount of

1 expense required to -- for us to catch up, you
2 know, to 17 years of, you know, just in this one
3 area of contracting and other things, but across
4 our IT environment.

5 I'm curious, without taking this too much
6 further, but I assume that whether it's DGS or
7 maybe the State Department, we obviously are
8 connected to every one of these contractors. We
9 probably -- they bill online and we pay online
10 and all those kinds of things. Does that take us
11 in another direction in terms of the amount of
12 high value, you know, information that we really
13 have in our systems? And what happens next in
14 that regard?

15 And hopefully, I'm not talking enough to,
16 you know -- any one of those online transactions
17 potentially creates a tunnel. And so now I'm
18 teaching people where they should be looking, but
19 if you can sort of address -- those are the scale
20 and scope that you as, you know, the Deputy
21 Secretary would actually have to envision to
22 create security excellence across, you know, to
23 modernize where we need to be.

24 DEPUTY SECRETARY HESS: well, I'll speak
25 to it as much as I can. Again, most of I think

1 what you're getting at is the actual technology,
2 and I just provide the contracting to enable
3 those to acquire those services. But I can say
4 that we have -- again, in those -- in those terms
5 and conditions that I've provided -- we have
6 specific terms for, I think the acronym is PICA.
7 It's credit card transactions, and that there are
8 special security provisions attendant to
9 suppliers that provide like debit cards for the
10 Commonwealth.

11 The other that you mentioned, I believe,
12 is typically referred to in the industry as
13 hosted data. Right. So it's not data that's
14 resident here in the Commonwealth on our servers,
15 but is, you know, in the cloud, in some cloud
16 application, things like that. And we do have
17 specific terms and conditions again, dealing with
18 the security of hosted data as opposed to access
19 to data that is, you know, within our four walls.

20 MINORITY SUBCOMMITTEE CHAIRMAN WEBSTER:

21 when you're talking about that part, does SB --
22 make sure I get it -- 696 -- I wanted to say 9 --
23 I get the sixes and nines upside down here.

24 Does that address some of the
25 relationships that you would have with hosted,

1 you know, with cloud servers and technology
2 companies?

3 DEPUTY SECRETARY HESS: I don't think it
4 affects it, quite honestly. You know, the
5 requirements for encryption in the bill, I
6 believe, are general enough to provide for OA to
7 select varying level -- different types of
8 encryption and employing other defensive
9 mechanisms like firewalls and end-point access
10 and multifactor authentication and so on. That
11 it allows us to select the right combination of
12 techniques or tools or even software to protect
13 the data at rest or in transit.

14 MINORITY SUBCOMMITTEE CHAIRMAN WEBSTER:
15 Chairwoman, thank you.

16 I was really looking forward to the Cyber
17 Security Association. I send my regrets, but I
18 do have a voting meeting. I'm departing.

19 Thank you.

20 MAJORITY CHAIRWOMAN PHILLIPS-HILL: Thank
21 you, Representative Webster.

22 We are recording this hearing, so you
23 will be able to go back afterwards and watch
24 their testimony. Thank you for participating
25 here today.

1 Thank you very much.

2 Are there any other questions?

3 Representative Miller.

4 REPRESENTATIVE MILLER: Thank you, Madam
5 Chair.

6 And thank you for your testimony, Deputy
7 Secretary. You said in your testimony that
8 you're basically okay with the change --
9 changing of the notification language in the
10 bill. You also said, however, that you would
11 rather keep the other, the original law because
12 of its flexibility component. And then you
13 talked about about \$84 million projected costs.

14 My comment is, what is the cost to the
15 Commonwealth for not fixing this, and the cost to
16 the citizens for the breach of their information?

17 That's a rhetorical question, but my
18 question to you is the -- relative to your
19 recommendations, you referenced not retroactive,
20 service only, and threshold limits. In your
21 estimation, if some of those were taken into
22 consideration, what would be the potential costs?

23 DEPUTY SECRETARY HESS: That's tough. I
24 don't know. But I think it could be several
25 orders of magnitude less. That's the best answer

1 I have for you, Representative Ryan.

2 I would -- we would need to know, you
3 know, we would have to close that gap on, you
4 know, the one hour, seven days discovery
5 determination, et cetera. And once we had that,
6 then we could narrow down that 10,000 to
7 something else. And you know, if that something
8 else is 100, 200, that's one thing. If it's, you
9 know, we go from 10,000 to 9,900, that's
10 something else.

11 And I can't answer that sitting here
12 without us working together to get to that
13 definition of notification and of discovery and
14 determination.

15 REPRESENTATIVE Miller: So in your
16 estimation from a contractual standpoint, I know
17 you're not the IT person, but if we do nothing
18 but change the notification system and keep
19 everything else the same, will that provide
20 significant and substantial amount of protection
21 for the citizens from further breaches.

22 DEPUTY SECRETARY HESS: I'm not the IT
23 guy. I'm sorry.

24 REPRESENTATIVE Miller: Okay.

25 DEPUTY SECRETARY HESS: I'm going to pass

1 to John on that on.

2 REPRESENTATIVE Miller: All right. Yep.
3 Very good.

4 DEPUTY SECRETARY HESS: (Inaudible).

5 REPRESENTATIVE Miller: Thank you very
6 much.

7 MAJORITY CHAIRWOMAN PHILLIPS-HILL: Thank
8 you, Representative.

9 Senator Dush.

10 SENATOR DUSH: Thank you, Deputy
11 Secretary.

12 I'm sorry. I had to step out and run
13 four bills in my own Committee, and I'm back.
14 I'm glad you're still here. Yes, I'm juggling
15 like crazy.

16 In your testimony, you had -- you were
17 stating that the -- we were talking about the
18 breaches that Senator Laughlin had spoken of, but
19 you said there were things in place already.

20 would they have prevented or were there
21 failures on the part of those contracts? In
22 specific -- sorry, I'm trying to catch up here.
23 In -- it was in reference to the contracts that
24 were already in place and having to go back and
25 renegotiate those.

1 what is to prevent those failures from
2 reoccurring, similar to those other two data
3 breaches if we don't go back and renegotiate
4 those?

5 DEPUTY SECRETARY HESS: It's again, hard
6 for me to say. As your contracting officer, I
7 often do not -- I am not aware, sitting here, of
8 the root causes of the losses of data. What I
9 have to rely on are the agencies, the
10 investigating -- I think the Inspector General
11 was involved with the Insight Global, the
12 Department of Health.

13 And they, I believe, have a
14 responsibility to come back to me to say, you
15 need to change your terms and conditions because
16 protection was not afforded. That has not
17 happened. And so from where I'm sitting, it
18 appears as though whatever losses of data have
19 occurred, they have not been because we don't
20 have the protections, the contractual protections
21 in place, but because, you know, negligent or,
22 you know, honest mistakes have occurred, which
23 resulted in the loss of data or making public
24 data. And again, I -- I don't know that I can
25 put anything into a contract to turn a human

1 being into a machine.

2 SENATOR DUSH: Well, that's not actually
3 what I was getting at. I'm sorry.

4 DEPUTY SECRETARY HESS: Oh, okay.

5 SENATOR DUSH: What I'm talking about is
6 the delay in notification.

7 DEPUTY SECRETARY HESS: Oh, okay.

8 SENATOR DUSH: If we have to go back and
9 contractually renegotiate that so that there is a
10 more expedited notification of the public, of the
11 potential brief --

12 DEPUTY SECRETARY HESS: Right.

13 SENATOR DUSH: -- is there anything in
14 the contract right now? Was there a violation of
15 the contract or anything like that?

16 And if not, then there is definitely a
17 need then for us to ensure that our current
18 contractors are under obligation to make those
19 types of notifications in a timely manner.

20 DEPUTY SECRETARY HESS: I think that --

21 MAJORITY CHAIRWOMAN PHILLIPS-HILL:
22 Senator, the testimony was provided here today.
23 Chairman Grove read through the contracting
24 provisions and believes that the language in the
25 contract would require updates to be met. And so

1 we've debated this provision, and so I will just
2 respectfully ask if we could move on.

3 SENATOR DUSH: Gratefully.

4 MAJORITY CHAIRWOMAN PHILLIPS-HILL: Thank
5 you.

6 SENATOR DUSH: I'm grateful for the
7 information.

8 MAJORITY CHAIRWOMAN PHILLIPS-HILL:
9 Absolutely.

10 SENATOR DUSH: Thank you.

11 MAJORITY CHAIRWOMAN PHILLIPS-HILL: Thank
12 you very much.

13 I want to thank you for being here today.

14 DEPUTY SECRETARY HESS: Thank you.

15 MAJORITY CHAIRWOMAN PHILLIPS-HILL: One
16 last question, and then a thought. Can you tell
17 me exactly how many contracts we have with
18 third-party vendors that directly impact personal
19 health information or personal information?

20 DEPUTY SECRETARY HESS: I cannot.

21 MAJORITY CHAIRWOMAN PHILLIPS-HILL: You
22 don't know?

23 DEPUTY SECRETARY HESS: No.

24 MAJORITY CHAIRWOMAN PHILLIPS-HILL: You
25 are in charge of all of the contracts --

1 DEPUTY SECRETARY HESS: Sure.

2 MAJORITY CHAIRWOMAN PHILLIPS-HILL: --
3 here in the Commonwealth as the Deputy Secretary
4 in the Department of General Services. I'm going
5 to use a line that my predecessor in this chamber
6 used often. And he said, if you can't measure
7 it, you can't manage it.

8 If the Department of General Services
9 doesn't know how many contracts they have that
10 directly impact the personally identifiable
11 information of its citizens or the personal
12 health information of its citizens, I would take
13 it one step further. If you can't measure it,
14 you can't manage it, and you can't secure it.

15 The gentleman who is the prime sponsor of
16 this legislation, he builds homes. He's a
17 general contractor. When he builds a home for
18 you, he hires a carpenter, an electrician, a
19 drywaller, right, a plumber.

20 If one of those third-party vendors or
21 subcontractors that he uses, they don't do what
22 they're supposed to do, the buck stops with him.
23 And I have to tell you that in this Commonwealth,
24 when a third-party vendor provides a breach of
25 personal information or personal health

1 information of one of the citizens of this
2 Commonwealth, the buck needs to stop with you.

3 So I appreciate you being here today. I
4 am very sorry that the chief information officer
5 was not here to provide testimony and answer the
6 questions of these members. But again, the buck
7 has to stop with us. It is our responsibility.

8 We compel the people of this Commonwealth
9 to provide that information to us. They don't
10 have a choice. They have to pay their taxes,
11 right.

12 DEPUTY SECRETARY HESS: Sure.

13 MAJORITY CHAIRWOMAN PHILLIPS-HILL: And
14 that means that we have to hold ourselves to a
15 much higher standard. The status quo isn't
16 working. You just ask anybody who has had their
17 information breached by Insight Global, had their
18 data breached through the unemployment
19 compensation system, had their data breached when
20 the teacher information management system at the
21 Department of Education was breached. You talk
22 to them, they would say the status quo isn't
23 working.

24 The people of this Commonwealth deserve
25 better, and I thank you very much for your

1 testimony here today, Mr. Hess.

2 DEPUTY SECRETARY HESS: Thank you.

3 I look forward to working with the
4 Committee further.

5 MAJORITY SUBCOMMITTEE CHAIRMAN DIAMOND:

6 If I could just backtrack on one thing. Did you
7 say we don't know what the root cause is of these
8 breaches? Because we do know what the root cause
9 of the Insight Global data breach was.

10 Some supervisor somewhere, contact
11 tracing supervisor, thought it was a good idea to
12 upload data to an open Google doc that anybody
13 who had the address for that Google doc could
14 find that. Are you telling me that there's
15 nothing in your contracts that prohibits that
16 sort of data going to an open source such as a
17 Google doc, and that no one at Insight Global
18 knew that that would not be a good idea?

19 DEPUTY SECRETARY HESS: Of course not.

20 Confidentiality provisions in the contracts
21 clearly require the contractor to take every
22 possible precaution, training, background checks,
23 et cetera, of their employees to prevent such
24 things.

25 And again to my point earlier to Senator

1 Dush, this does not appear to be a systemic or
2 mechanical or digital breach that occurred with
3 Insight Global, but it was simply and
4 regrettably, very regrettably, individuals not
5 being aware of the ramifications of the tools
6 that they choose to use.

7 MAJORITY SUBCOMMITTEE CHAIRMAN DIAMOND:
8 All right. Well, thank you, Deputy Secretary.

9 DEPUTY SECRETARY HESS: Thank you.

10 MAJORITY SUBCOMMITTEE CHAIRMAN DIAMOND:
11 Appreciate it.

12 DEPUTY SECRETARY HESS: Yep.

13 MAJORITY CHAIRWOMAN PHILLIPS-HILL: Our
14 next testifier today is Andrew Kingman, of
15 counsel, State Privacy and Security Coalition.

16 Thank you, Mr. Kingman.

17 MR. KINGMAN: Hi. Good morning, folks.
18 Can you all hear me?

19 MAJORITY CHAIRWOMAN PHILLIPS-HILL:
20 Please -- please begin your remarks.

21 MR. KINGMAN: Thanks very much.

22 Good morning, Chair Phillips-Hill, Chair
23 Grove, members of the Committee. I want to thank
24 you for your time today in consideration. My
25 name is Andrew Kingman. I represent the State

1 Privacy and Security Coalition, which is a
2 coalition of over 30 companies and trade
3 associations in any number of sectors.

4 I also am a compliance attorney who has
5 worked on maybe 30 different security incidents
6 responding specifically on the State notice
7 requirements, pieces of those breaches. So I
8 have some experience actually working through the
9 compliance provisions, as well.

10 want to thank the Senate for their work
11 on this bill. Really appreciate it. And you
12 know, our amendments, we've provided some
13 testimony as well as both a list of suggested
14 amendments and a red line to kind of show how
15 that fits together. And happy to take any
16 questions on it.

17 Many of our edits are simply clarifying
18 edits that make the bill a little bit easier and
19 more specific. There are two issues that I
20 wanted to primarily address. The first is simply
21 including private entities in the electronic
22 notification provisions of this legislation.

23 This is the type of notification that we,
24 you know, often get that says we have noticed
25 suspicious account activity. Please go check and

1 change your password. Make sure that, you know,
2 if this wasn't you, that you are, you know, able
3 to go in and keep an eye on your personal
4 information here. So simply including private
5 entities in that notice -- the ability to notify
6 consumers quickly about those types of -- that
7 type of activity.

8 The second deals with the encryption
9 standards. And just, our feeling is that having
10 sort of Pennsylvania-specific promulgated
11 encryption standards from the executive branch
12 may not be the best fit given that many, you
13 know, private entities and contractors work
14 nationally, given the rapid evolution of
15 encryption and how quickly technology changes,
16 that allowing that technology and allowing
17 entities to sort of use the latest and greatest
18 encryption technology may be a better approach
19 here.

20 So those are our -- those are our
21 suggested edits. Happy to take any questions,
22 but those are our -- that's the gist of where
23 we're headed here.

24 MAJORITY CHAIRWOMAN PHILLIPS-HILL: Thank
25 you very much.

1 Chairman Grove.

2 MAJORITY CHAIRMAN GROVE: Thank you so
3 much for your testimony.

4 You were obviously here for the Deputy
5 Secretary's testimony. We hear this a lot with
6 when we try to do IT policy from the
7 administration, that it completely takes away
8 their flexibility. Putting in standards takes
9 away their flexibility to manage. I'll tell you
10 right now, many of us sitting here right now -- -
11 not speaking for anybody -- but the General
12 Assembly does not want to manage the executive
13 branch's IT stuff at all. I have no interest in
14 it.

15 But putting in guidelines, when you read
16 SB 696, and having been someone who has dealt
17 with IT in the private sector --

18 MR. KINGMAN: Sure.

19 MAJORITY CHAIRMAN GROVE: -- does this
20 give -- take away any ability for any flexibility
21 whatsoever to the administration to manage their
22 IT?

23 MR. KINGMAN: Well, I think our concern
24 is around just the pace of technology and the
25 pace of policy, right. And so making sure that

1 if there are updates or improvements in
2 encryption technology specifically, the
3 businesses are not put in the position of, well,
4 we're not permitted to use that because of
5 guidelines that have been promulgated.

6 You know, I think that's the situation
7 that we want to avoid, right, that entities are
8 allowed to update their encryption methods --

9 MAJORITY CHAIRMAN GROVE: Right.

10 MR. KINGMAN: -- you know, as easily as
11 possible.

12 MAJORITY CHAIRMAN GROVE: Right. And the
13 underlying bill doesn't weight what encryption.
14 It basically goes into if there's a breach, you
15 must notify, correct?

16 MR. KINGMAN: That's right.

17 MAJORITY CHAIRMAN GROVE: Yeah. So we
18 don't -- we don't stop the ability of the private
19 sector to bring in new, I would say cyber
20 security protections, or the administration to
21 engage in increased cyber security protections.
22 We're focused on this bill specifically as
23 breached within the government arena, correct?

24 MR. KINGMAN: Sure. The provision that
25 we were looking at was the section -- Section 4,

1 or excuse me, Section 5.1 with the general rule
2 Subsection B. So Subsection A, we're advocating
3 a change to allow not only encryption but other
4 risk-based frameworks that would allow, again, as
5 the Deputy Secretary mentioned, frameworks like
6 NIST, the various NIST cyber security frameworks,
7 ISO 27001 frameworks, the various frameworks that
8 allow businesses to prioritize their
9 vulnerabilities and put their resources towards
10 the ones that are most effective to safeguard
11 consumer data.

12 And then the next provision just making
13 sure that those State contractors are allowed to
14 use whatever the latest and greatest encryption
15 technology is.

16 MAJORITY CHAIRMAN GROVE: Okay. And then
17 the other issue you bring up -- and I guess we're
18 doing this in a bit of a vacuum. You mentioned
19 that a potential amendment in this bill would
20 include private businesses and other entities.
21 This bill is geared -- my understanding, it was a
22 three-bill package. This bill was geared towards
23 the government end.

24 MR. KINGMAN: Sure.

25 MAJORITY CHAIRMAN GROVE: That's why it's

1 in the State Government Committee.

2 MR. KINGMAN: Absolutely.

3 MAJORITY CHAIRMAN GROVE: There is
4 another bill. I think Ron Mercuri has one, and
5 you also passed one for the private sector. I
6 believe is that Consumer Affairs again.

7 MAJORITY CHAIRWOMAN PHILLIPS-HILL: So
8 there is a ransomware bill, and that is also
9 focused on government. The only piece of
10 legislation, to my knowledge, currently in the
11 General Assembly that addresses the private
12 sector is Representative Mercuri's legislation
13 that is in House Consumer Affairs currently.

14 MAJORITY CHAIRMAN GROVE: And I believe
15 they're trying to work on that bill.

16 MR. KINGMAN: Sure.

17 MAJORITY CHAIRMAN GROVE: So I just want
18 to let you know that is out there, and we --

19 MR. KINGMAN: No, and I appreciate that.
20 Because this amends the underlying breach
21 notification statute, we just want to allow
22 businesses to also take advantage of that helpful
23 notification process that tends to speed things
24 up for that kind of suspicious account activity
25 rather than go through a forensic investigation,

1 et cetera. So thank you.

2 MAJORITY CHAIRMAN GROVE: That's all I
3 have. Thank you.

4 MAJORITY CHAIRWOMAN PHILLIPS-HILL: Thank
5 you, Chairman Grove.

6 Interesting point that you make with
7 regard to flexibility and assuring that
8 government can use the most up-to-date security
9 measures that they see fit to best safeguard the
10 data.

11 So the challenge that we had with the
12 updates to the unemployment compensation system
13 was that the software actually came with
14 multifactor authentication. A decision was made
15 at the Department of Labor & Industry that it
16 would be too burdensome to turn it on. And by
17 not doing that, that was what created the
18 opportunity for nefarious actors to get into
19 people's personal bank accounts and their
20 unemployment compensation account, change the
21 banking information, reroute their money for
22 unemployment compensation into their bank
23 account.

24 So we want flexibility, right. We
25 recognize that technology is constantly evolving,

1 that there are really smart people out there,
2 every minute of every hour of every day creating
3 new and better ways for us to secure sensitive
4 information. But how can we assure that when we
5 give the flexibility to those governmental
6 entities that they will actually do the right
7 thing and protect personal information with the
8 best security measures?

9 MR. KINGMAN: Sure. And I think that's a
10 fair question. Where our concern is more private
11 sector-based, I don't think our role is to tell
12 the State what -- how it should govern State
13 agency contracts or anything like that. So our
14 concern is more, you know, and specifically here
15 just to encryption and just recognizing how
16 quickly that technology has evolved. Making sure
17 that businesses have a suite of tools available
18 to them, not just encryption but, you know,
19 again, any of the other, you know, firewall
20 protection, end point security, employee
21 training, things along that nature.

22 So we're more focused on the private
23 sector implications.

24 MAJORITY CHAIRWOMAN PHILLIPS-HILL: Very
25 good. Thank you.

1 Any other questions?

2 Representative Miller.

3 REPRESENTATIVE MILLER: Thank you,
4 Mr. Kingman. Appreciate your testimony.

5 I have a question. Want to go back to
6 Section 5.1 on encryption --

7 MR. KINGMAN: Sure.

8 REPRESENTATIVE MILLER: -- required. In
9 that section, particularly Section B, you remove
10 the statement related to transmission policy that
11 the Governor's Office of Administration shall
12 develop and maintain a policy to govern --

13 MR. KINGMAN: Sure.

14 REPRESENTATIVE MILLER: -- and so one.
15 But in point A, the general rule is that State
16 employees and State agency contractor employees
17 shall, and then it goes on. But then you remove
18 that from the Governor's Office.

19 why would you remove from the Governor's
20 office the development of encryption and
21 transmission policies but give it to State
22 employees and State agency contractor employees?

23 MR. KINGMAN: The -- the rationale here
24 on the amendments, again, was to -- so striking
25 the from being viewed or modified by an

1 unauthorized third party, you know, our sense is
2 that it should be to just protect the
3 transmission of personal information over the
4 Internet, whether that's from being viewed or
5 authorized or other activities. You know, it
6 should be protecting the information, not from
7 what a third-party was doing.

8 And again, the other piece, it was not
9 clear to us whether that was simply just State
10 agencies or whether that would include
11 contractors, as well. But again, the idea of
12 just having the State set particular encryption
13 standards, our concern is that the technology
14 would outpace those standards, and that, again,
15 businesses would be just put in the position of
16 having to use, you know, outdated standards to
17 safeguard their information.

18 That was the rationale there. We weren't
19 trying to reallocate responsibility or anything
20 along those lines.

21 REPRESENTATIVE MILLER: Okay. So is it
22 -- is it your estimation that there could be a
23 parallel or synchronous level of encryption
24 technology knowledge in the real world and
25 government policy working in a synchronous

1 fashion?

2 Or is there a setup that you can envision
3 where the state policy and the current technology
4 could be synchronous?

5 MR. KINGMAN: Well, I think an example
6 would be, as the Deputy Secretary noted, you
7 know, those -- those types of NIST frameworks or
8 ISO frameworks that get updated regularly and
9 sort of a built-in responsibility to continue
10 evolving with those -- with those frameworks.
11 That would be an example that, I think, gets at
12 your question.

13 REPRESENTATIVE MILLER: Because I
14 understand what you're saying, that policy does
15 not keep pace with technology.

16 MR. KINGMAN: Right.

17 REPRESENTATIVE MILLER: But if there's a
18 way that we can do that, I think that would be
19 appropriate obviously. But I'm wondering in this
20 language here, your suggestions, I have to study
21 this more in depth because it almost seems like
22 we give the responsibility to the contractor
23 rather than the state policymaker. And I think
24 that's exactly what we're trying to do, because
25 as state policymakers, we have that as a

1 responsibility.

2 MR. KINGMAN: Right. Sure. I
3 understand.

4 REPRESENTATIVE MILLER: I mean, I
5 appreciate your attempt, and getting the
6 technical language is tough. And we have to --

7 MR. KINGMAN: We would be happy to look
8 at additional language if you had thoughts or --

9 REPRESENTATIVE MILLER: Okay.

10 MR. KINGMAN: -- anything like that.

11 REPRESENTATIVE MILLER: Very good. Thank
12 you.

13 MAJORITY CHAIRWOMAN PHILLIPS-HILL: Thank
14 you, Representative.

15 Mr. Kingman, thank you very much --

16 MR. KINGMAN: Thank you.

17 MAJORITY CHAIRWOMAN PHILLIPS-HILL: --
18 for your testimony here today.

19 MR. KINGMAN: Sure.

20 MAJORITY CHAIRWOMAN PHILLIPS-HILL: We
21 very much appreciate it.

22 with that, I will welcome our final
23 testifier today, Mr. Scott Davis, the President
24 and CEO of the Cyber Security Association of
25 Pennsylvania.

1 Thank you, Mr. Davis. And you can begin
2 your testimony whenever you're ready.

3 MR. DAVIS: Thank you, Chairs, esteemed
4 members of the State Government Subcommittee of
5 Information Technology and Communication, and the
6 Senate Communications and Technology Committee.
7 Thank you for inviting me today.

8 On behalf of the Cyber Security
9 Association of Pennsylvania, I thank you for that
10 opportunity to submit the testimony on behalf of
11 our members and the cyber security community in
12 general. Also, thank you to Senator Laughlin for
13 bringing this up and getting this bill present
14 today.

15 Currently, Pennsylvania has the third
16 oldest breach notification law on record. Only
17 Minnesota and Wisconsin are older. The breach of
18 Personal Information Notification Act, P L. 474
19 No. 94 passed on December 22, 2005 and become law
20 June 19, 2006.

21 To put that in perspective of modern
22 technology, the first iPhone was released in
23 2007. And ransomware didn't become a common word
24 until 2011. It's fair to say a lot has changed.
25 SB 696 looks to update this critical piece of

1 legislation that serves to protect the residents
2 of the Commonwealth against these modern data
3 breaches. It is the opinion of the Cyber
4 Security Association of Pennsylvania and its
5 founder, Scott R. Davis, that as drafted, SB 696
6 does not protect residents or ensure Pennsylvania
7 citizens are alerted timely when a breach of
8 their data occurs.

9 Today, data breaches are reported daily.
10 And the risk of a breach of personal information
11 for citizens are greater than any time before.
12 According to DigitalGuardian.com, in 2005, only
13 157 data breaches were reported in the United
14 States. That included 66.9 million records of
15 data exposed.

16 In the Verizon Data Breach Investigation
17 Report for the year 2021, Verizon confirmed 5,212
18 data breaches and over 1.1 billion records
19 breached. A lot of that is thanks to many states
20 that have passed an updated breach notification
21 law, forcing businesses to report and disclose
22 breaches.

23 With over 14 data breaches a day, we must
24 change how we look at data breaches. Cyber
25 criminals are piecing together data from multiple

1 breaches, along with public data from sources
2 like social media and compiling profiles of
3 citizens, opening them up to ransom, extortion,
4 and identity theft. Data extraction, or the
5 collection of different types of data from a
6 variety of sources, means that cyber criminals no
7 longer need data that is combined with an
8 individual's first name or simply their first
9 initial and last name.

10 SB 696 is a reactive bill. When I use
11 the term a reactive in technology terminology, it
12 means it's something that occurs after an
13 incident has occurred. When you look at
14 proactiveness, it's steps that are being done to
15 prepare for something to happen. When we discuss
16 a breach notification, it is always going to be a
17 reactive because it is not triggered until a
18 breach has occurred.

19 Every contractor, every employee, every
20 agency has access to PII, to PHI, or records
21 indicating a data breach. Each data breach is a
22 source of data. And viewing it in this way,
23 section 2, personal information should be
24 expanded to include State and Federal-issued IDs,
25 beyond just a driver's license or PennDOT-issued

1 ID, insurance policy numbers, IRS tax IDs,
2 passport IDs, military IDs, biometric data, or
3 other categorized databases, such as license
4 plate recognition systems or even the contract
5 tracing database that has been talked about of
6 citizens, which may or may not be tied to an
7 individual's name.

8 Throughout multiple state government
9 agencies, agency contractors, they have access to
10 many of this data, yet this data is not protected
11 with SB 696 as drafted. In my experience, many
12 states are including many of these as types of
13 personal information, and the Commonwealth should
14 follow suit.

15 Section 3 provided for the notification
16 process and timelines for State agencies, State
17 agency contractors, State agencies under the
18 Governor's jurisdiction, counties, school
19 districts, and even municipalities. Excluded
20 from this list includes higher education and
21 businesses that engages in whole or in part of
22 the business of collecting, assembling,
23 evaluating, compiling, reporting, transmitting,
24 transferring, or communicating information
25 concerning citizens of the Commonwealth.

1 In a quick read of HB 2202, which was in
2 the Consumer Affairs currently, that also is
3 specifically targeting biometric data and does
4 not cover PII as broad as this current SB 696
5 does. Ensuring every entity that collects,
6 maintains, stores data is responsible and has a
7 legal obligation to report breaches of data, it
8 should be the right of any citizen of the
9 Commonwealth to be alerted and made aware when a
10 breach of any piece of their data is breached.

11 When I think of business technology, I
12 work full-time for a cyber security firm out of
13 Houston Texas called Liongard. Every one of our
14 vendors goes through a stringent vendor
15 questionnaire and security assessment before they
16 are allowed to be a vendor. It should be no
17 different for the Commonwealth of Pennsylvania to
18 expect the same result from every vendor or
19 agency that they contract with.

20 Also lacking is any penalty for covering
21 up a breach or simply claiming ignorance that a
22 breach was unknown. Every ransomware attack is
23 potentially a breach of data as your files were
24 accessed. Otherwise, they would never have been
25 encrypted. Yet, most organizations, including

1 both state and private, do not have the tools in
2 place to identify what or if any data was
3 actually removed from that network, from that
4 laptop, from that hard drive.

5 state laws that are found to have a
6 single notification point, i.e. an Attorney
7 General's office that breaches must be reported
8 to timely, and in some states are cataloged
9 online for full transparency. These states are
10 assisting the cyber security community and
11 individuals from across the globe to help
12 identify data has been breached. which is one of
13 the reasons, like I stated earlier, Verizon being
14 able to identify over 5,000 breaches over the
15 last year.

16 SB 696 continues the practice of multiple
17 reporting parties, including the office of
18 attorney general, a CISO, or a designee of a
19 State agency, the Governor's Office of
20 Administration. Simplicity is oftentimes key.
21 And transparency here should be a priority.

22 section 5.1, which has been discussed
23 previously, outlines encryption requirements for
24 State employees and State agency contractor
25 employees. whenever outlining technical

1 requirements, we advise caution when crafting
2 legislation as the terminology or technical
3 requirements oftentimes will advance faster than
4 legislation can keep up, which both witnesses
5 testified to earlier.

6 Section 5.1 is strong on data in transit
7 but should probably be included in SB 482, which
8 is more geared towards the government's policies
9 and rules set forth by legislature. Allowing SB
10 696 to focus on the discovery, reporting, and
11 penalties associated with data breaches should be
12 key, and leaving the technology aspects out of
13 it. We agree with Mr. Hess that this bill should
14 not legislate technology.

15 Again, we thank the esteemed members of
16 the Committee for the opportunity to provide this
17 testimony regarding Pennsylvania breach
18 notification law.

19 MAJORITY CHAIRWOMAN PHILLIPS-HILL: Thank
20 you very much, Mr. Davis.

21 Chairman Diamond.

22 MAJORITY SUBCOMMITTEE CHAIRMAN DIAMOND:
23 Thank you.

24 Mr. Davis, I'm really curious about --
25 you talked about biometric data. And as I'm

1 thinking of this, as I hear biometric, I think of
2 the movies where I, you know, somebody goes up
3 and they scan the retina. And you know, they're
4 given access to something. But as I'm sitting
5 here thinking about it, am I correct in assuming
6 that biometric data, as you are using it here,
7 would actually be the merging of personally
8 identifying information and personal health
9 information?

10 wouldn't the biometric data be touching
11 on both of those things? Or am I not
12 understanding what you're meaning by biometric
13 data.

14 MR. DAVIS: I would say your health
15 information is a piece of the puzzle. Your
16 biometric data is a piece of the puzzle. When
17 you look at combining databases, you're looking
18 for points that are similar. It could be first
19 name, last name, e-mail address, account name, et
20 cetera, or social security number or beyond.

21 So if I was to gain access to the DMV
22 database or on Real ID, I would gain retina
23 images, I would gain facial impressions. If I
24 was to gain access to a key card system that I
25 use maybe to access a building or access a

1 security key or gain access to an Android phone
2 and be able to encrypt or decrypt access to the
3 fingerprint, that is all biometric information.

4 There was a firm in the UK -- I apologize
5 for not knowing the name off the top of my head
6 -- that reported a data breach. It was one of
7 the largest UK-based forensic or biometric data
8 collectors for organizations, for businesses, for
9 State agencies, that either used the retinas,
10 either used the footprint -- thumbprint, but
11 biometric data is still a person. It's a piece
12 of the puzzle.

13 And if I'm able to now capture your
14 signature, capture your account number, and
15 capture a fingerprint or an iris scan, you're
16 really opening up to beyond a current vision of a
17 scope of a threat.

18 MAJORITY SUBCOMMITTEE CHAIRMAN DIAMOND:
19 So does this -- does this fall on the same lines
20 of things that we were talking about earlier,
21 about not being able to keep up so that we have
22 to -- if we would include biometric data in this
23 law, is there a broad enough way that we could do
24 that so that we're not limiting which
25 technologies we're talking about?

1 MR. DAVIS: Absolutely. I think there's
2 14 or 15 states, if my memory serves me correct,
3 that have biometric bills tied into legislation
4 across the United States. There is a -- in my
5 notes down below, number one, there's a URL that
6 actually takes you through all of the breach
7 notification laws across all 50 states, plus
8 Puerto Rico.

9 MAJORITY SUBCOMMITTEE CHAIRMAN DIAMOND:
10 All right. Thank you.

11 REPRESENTATIVE NELSON: Thank you,
12 Mr. Chair.

13 I appreciate your testimony. I think
14 you're raising some even larger concerns as, you
15 know, you layer in those biometrics. At times, I
16 think once somebody has your face ID, which the
17 phones now use, or fingerprint, they really can
18 go a lot further.

19 An earlier testifier, I asked them the
20 question about, you know, consequences. When in
21 your testimony you talked about lacking penalty
22 for covering up a breach, what do you envision as
23 an appropriate consequence for individuals or
24 entities, because we could have both making those
25 decisions?

1 MR. DAVIS: Most states, as I've read and
2 understood them to read, put the penalty on the
3 business. Oftentimes, mistakes happen due to
4 lack of training. Proper training teaches you
5 when not to click on e-mails or when to let your
6 emotions run rampant and, you know, be opt for
7 social engineering.

8 Social engineering is the act of
9 designing an e-mail to get you to click to
10 capture information. So oftentimes, the
11 penalties are strictly focused on the entity that
12 has allowed the breach to occur. It's typically
13 a financial penalty through most of the
14 legislations that I've read.

15 REPRESENTATIVE NELSON: And you mentioned
16 also some states have a single notification
17 point, so that businesses can go and everybody
18 can kind of use that. Was that just appropriate
19 action that government implemented on its own or
20 was that achieved through a law that required
21 such a portal to be listed?

22 MR. DAVIS: I believe in California's
23 case, it was the law of CCPA, the California
24 Consumer Protections Act, that passed several
25 years ago and actually has been updated multiple

1 times since then. In many states, it is
2 typically a law that is passed that is creating
3 that database, if you will, that everyone that
4 reports to.

5 REPRESENTATIVE NELSON: Okay. And my
6 last question is, as we layer in the biometric
7 data and pair that with an individual's personal
8 passwords, once that information is out there,
9 how does somebody readjust or resecure their
10 retina scan or their face ID?

11 what happens following that breach in
12 order to be able to correct somebody that will
13 soon to be a victim if they're not already?

14 MR. DAVIS: Well, you can't change your
15 iris. You can't change your face. You can't
16 change your thumbprint. well, I guess you could
17 cut your fingers, but that's besides the point.
18 You really can't change your biometric. It is
19 who you are. And there is no methodology of
20 erasing that data once it's been breached.

21 So once that data has been breached,
22 really, I think today it's just sitting out there
23 and waiting for the opportunity for when it is
24 possible to utilize that to create a breach.
25 Then that data will start to be used. There's

1 already tons of biometric data that has been
2 breached that's out on the dark web.

3 REPRESENTATIVE NELSON: So in your
4 opinion, do you feel this legislation should
5 include elements that would incorporate
6 protections for that biometric data or is that
7 addressed in one of these other packages?

8 MR. DAVIS: This should be addressed in
9 this bill.

10 REPRESENTATIVE NELSON: Okay. Thank you.
11 Thank you, Mr. Chair.

12 MAJORITY CHAIRWOMAN PHILLIPS-HILL:
13 Representative Miller.

14 REPRESENTATIVE MILLER: Thank you,
15 Mr. Davis.

16 Several questions. You talked about --
17 you're from Texas; is that correct?

18 MR. DAVIS: I'm from Pennsylvania. I
19 work for a firm in Texas.

20 REPRESENTATIVE MILLER: Okay. Do you
21 have familiarity with other states and their
22 legislation in terms of a complete separation or
23 siloing of personal information, say in our case
24 PennDOT, keeping their information solely there,
25 or Department of Health, et cetera?

1 Is there legislation out there in other
2 states that keeps that information completely
3 separate by statute.

4 MR. DAVIS: I am not aware. Part of my
5 job duties at Liongard is to assist on security
6 compliance questionnaires that we receive and
7 understanding the 50 states and across the globe
8 that we work with, including GDPR and essential
9 aid for Australia.

10 REPRESENTATIVE MILLER: Okay. This --
11 my question was in reference to what was shared
12 earlier about what's happening here in
13 Pennsylvania. So we'll have to look at that.
14 All right.

15 Do you have in your portfolio the gold
16 standard of legislation somewhere in the states
17 that is related to what we're doing? What states
18 have the best in class out there related to what
19 we're talking about here today?

20 MR. DAVIS: I truly believe California
21 has set the pace and set the standard that many
22 states are duplicating from.

23 REPRESENTATIVE MILLER: Okay. Question,
24 you referenced in your business that you have an
25 extensive questionnaire that you put all your

1 vendors through. Is that something you might be
2 able to share with us or is that private material
3 for your business?

4 MR. DAVIS: The one that is through my
5 employer, I would have to validate, but I can
6 provide samples.

7 REPRESENTATIVE MILLER: Okay.

8 MR. DAVIS: Or a simple Google search
9 will provide many samples.

10 REPRESENTATIVE MILLER: All right. And
11 the last question, the gentleman, Mr. Kingman
12 before, provided some suggestions to the language
13 that's in this current bill, SB 696.

14 Have you reviewed the bill?

15 You gave suggestions here in your
16 testimony, but actual language, or could you
17 perhaps do that to provide some suggestions for
18 the Committee to look at?

19 MR. DAVIS: I can do that. I would just
20 ask for some time as we are in the middle of a
21 move, and I have three children.

22 REPRESENTATIVE MILLER: No problem. I'm
23 not in the Senate. I don't want to speak for
24 Senator Laughlin, but I think it might be helpful
25 just to have multiple people providing input.

1 MR. DAVIS: Absolutely.

2 REPRESENTATIVE MILLER: Okay. Thank you.

3 MAJORITY CHAIRWOMAN PHILLIPS-HILL: Are
4 there any other questions?

5 Mr. Davis, I want to thank you. Your
6 testimony was very helpful, and I think that
7 there's certainly an opportunity to address,
8 particularly, the concern about biometric data.
9 Also appreciate your thoughts on ransomware
10 legislation that is currently in the House
11 Judiciary Committee.

12 I would like to thank all of the
13 testifiers here today, all of the members who
14 participated. Appreciate the prime sponsor of
15 the legislation, his work to advance that
16 legislation. And I do believe that it is in very
17 good hands in the House with Chairman Grove and
18 Chairman Diamond. Appreciate the opportunity to
19 work collaboratively with them.

20 Any further remarks here today from
21 either of the Chairmen?

22 MAJORITY SUBCOMMITTEE CHAIRMAN DIAMOND:
23 I want to thank all of the testifiers as well as
24 Senator Laughlin and the members for sitting in
25 on this hearing today.

1 We have come a very, very long way. I
2 remember my first -- my first foray into
3 protecting people's data. And it must have been
4 nearly three decades ago when I switched to
5 electronic storage of people's credit card
6 numbers at my business. It was very different
7 than, you know, making sure that the carbon copy
8 was destroyed. It was my first foray into that.

9 And I think this might be instructive, as
10 well, is that my decision then was I would no
11 longer store -- store people's credit card
12 numbers, because I didn't want to be responsible
13 for that information if someone broke into my
14 office and electronically, you know, hacked into
15 my computer or just opened up -- at that date,
16 there were no passwords for computers back then
17 either. So it would just be a matter of them
18 smashing a window, opening a door, and going in
19 and looking on my computer.

20 So I just opted not to store that data.
21 And I'm wondering, too, if maybe the Commonwealth
22 might be able to ask that question maybe a little
23 bit more often, so that we don't even have this
24 information circulating in Commonwealth cyber
25 systems where it would be accessible. So we've

1 come a long way from, you know, carbon copies of
2 credit card receipts to be destroyed to potential
3 biometrics and theft of my actual face, retina,
4 and finger print, but it is a great education.

5 And I appreciate everybody coming here
6 today and the time we've spent on this.

7 MAJORITY CHAIRWOMAN PHILLIPS-HILL: And
8 with that, I will now recess the Senate
9 Communications and Technology Committee until the
10 call of the Chair.

11 Thank you very much.

12 (Whereupon, the hearing concluded at
13 10:44 a.m.)
