

**Written Testimony from Bruce Munshower, Supporter of the Drive Electric PA Coalition**

Here is my testimony for the public hearing on May 1....

I currently drive a vehicle with an internal combustion engine, but am seriously considering a switch to an electric vehicle to reduce emissions in the state. I certainly understand that the state needs to find a way to recover lost revenue as fewer people use gasoline. As for me, I get 44 miles per gallon in my vehicle, so with the state tax on gasoline at .0611/gal that means for every 100 miles I drive I am contributing just a bit less than \$.14 to the state budget. Any tax on electric vehicles higher than that would be a disservice to the people you represent.
